That was my feelings over 15 years ago! 17 years ago, I voiced my discontent over the radio waves. Many asked that I do not leave, only put the station away for a year. Well when I came back after a year, many people I knew were gone, so I sold the radio. I now have a Cherokee AH 100 for hunting and emergency use. I also have a Wilson 500 magnetic mount for the mobile adapting.

I wanted to get some opinion from the pros out there on some radio advice,

I am considering the following radios

Connex 4000 hi power

Ranger 2970

President Lincoln

I currently have a president grant (about 1 1/2 yr. old) and slip seat into sterling trucks with fiberglass doors (lousy grounds for antennas) I am just not getting out with this radio and am considering the above.. The company frowns on mag mount antennas as well.. Thank you and all responses welcomed...

So that excuses out-of-band operation? That excuses deliberate interference with other stations? That excuses deliberately ignoring the legal power limit? That excuses the use of profanity on the air?

>>is only one argument that really holds water. The code testing

>HF station thats worth more than a pile of dirt, too.... so that would
>automatically preclude a lot of people from upgrading

The only people this would preclude from upgrading are the people with the CB mentality that says you ain't s**t unless you have the biggest, baddest radio on the block. For normal people, you can go to a hamfest and pick up a very good HF station for a lot less money than you might think. You may not have the newest, most expensive all-mode HF rig from Kenwood, Icom, Yaesu...but the older model from a couple of years ago is no less useful today than it was when it was new.

As far as antennas are concerned, you can buy a used antenna tuner at a hamfest, get a G5RV from MFJ for a whopping $30, add some coax feed line and some rope or other nonconducting support and you're ready to go on 80 through 10 meters for less than most CB antennas cost. Or if you're that strapped for cash, buy a roll of wire and build yourself a dipole.

>with write in answers would be in order. There are lots of
>technical folks, engineers, smart people, etc, that want to get into
>HF amateur radio but the code is a significant barrier to them.

Yeah, I understand that. Unfortunately, the code is also a significant barrier to the CB operators who can't be bothered with things like rules. This is a reflection of society - the many suffer because of the actions of the few.

>Again, for the bands supplied the amateur rules are not unreasonable.
>For the CB part 95 is VERY unreasonable given the circumstances.

What is unreasonable about expecting people to operate ONLY on the frequencies authorized by the rules?

What is unreasonable about expecting people to avoid deliberately interfering with other stations?

What is unreasonable about expecting people to stay within the legal power limits for the mode they are operating in?

What is unreasonable about wanting people to avoid using profanity on the airwaves?

What does the limitation on communicating with stations beyond a certain distance from your own station have to do with the moron who keys up with 500 watts on someone else's QSO and starts retransmitting a broadcast station's music programming?

What do prevailing propagation conditions on the 11 meter band have to do with the morons who break into a friendly conversation between two people they don't even know for the purpose of calling names and obscenities at the participants?

Even if I agree with you in considering the distance limitation to be unreasonable, that does not render the rest of Part 95 any less valid. You cannot use your opinion of that particular provision in Part 95 as justification to ignore the rest of Part 95 right along with it.

>As far as the assholes are concerned they always will be there, not
>much you can do about them aside from stomp on them or ignore
>them. Ever listen to 75/80M on a random night? Theres always at
>least one frequency that has "problems" on it. (Every night it's
>3.950, and other frequencies at random)

The problems on 80m are the subject of a current enforcement action by the FCC. So, you see, there *is* something that can be done about them. Like the old saying goes, "If you're not part of the solution, you're part of the problem."

Want to get rid of them on the CB band? Start sending in complaints about illegal operation to the FCC. Gather your evidence first - make tape recordings of the offenses as they are happening, while others track down the offending party and note field strength readings and results of radio direction finding efforts, and then you send a letter to the violator advising him or her that if they do not clean up their act, a complaint will be filed with the FCC.

If they continue to operate contrary to Part 95, complain to the FCC and supply them with your evidence.

That's how it works on the ham bands, and that's how it could work on the CB band if enough people were willing to get off their butts and do it instead of whining about it and doing nothing.

>And they don't have the choice to discriminate, either, because
>that too is illegal!

Ah, but they DO have the choice to require that the applicant demonstrate that they are qualified for the necessary license, by passing the written and/or code proficiency testing mandated by FCC for the license class being applied for. In fact, it's not even a choice - it's right in Part 97 that they are REQUIRED to do so!

>Most of the true assholes on the CB don't even know what it takes
>to get a ham license, period. Most of them couldn't pass
>the tech no code test.

Well, at least we agree on something! However, why entrust such individuals with any further HF privileges, in light of what they have done to the CB band? That is the point I am trying to make here, whether you understand it or not. I got my ham ticket to get away from people like that. I certainly don't want them to follow me onto the ham bands, now do I? And neither do any other hams I know...so why would we want to make it any easier than it already is for those morons to get a license?

Trent,

I am a state certified RADAR instructor, and have been one for the last 6 years and have been RADAR certified since 1985. Did you know that RADAR has a plus or minus 1 mph variance? Please cite me even one case where a person was written a ticket and convicted for 1 mph over in the state of Georgia and withstood appeal. (hint) don't bother looking.

You almost got it right, If the zone is 35 mph or greater, Local, County, and Campus officers may not cite unless the speed exceeds the limit by at least 10 mph.

BTW, It's 40-14-8

Regards,

Arnie -

resistance between ground and centre should be infinity or insulation
resistance - ie very high.You are thinking of the dc resistance of the lengh
of the antenna which yes is very low 2-3 ohms .impedance should be ~50 ohms
which is the resistance to the rf signal.

Unfortuntely, Tom, there's no way to enforce civility and courtesy.

Even if Uncle Charlie could somehow force the worst offenders off the air permanently, as long as there's an atmosphere of hostility and rudeness and value placed on the strongest signal regardless of operating practice, more jammers will come. The conditions of extreme rudeness (in some areas at least) create and even attract obnoxious operators. More people will come running power "stepping on" people just trying to have a
normal, friendly conversation, just because they can. Many years ago, I got so disgusted with the nastiness on CB, evasive channel-changing, death threats between CBesr, etc. that I left the hobby forever, never to return. (I was licenced as KBTN 4826.)

The problem is, once the social stigma of being rude and obnoxious to others wears off, it's hard to turn back. Once it's deteriorated into a power-running competition of "might makes right", the battle for CB as a COMMUNICATIONS medium has been lost to the law of the jungle.

About the only way out is to start acting respectfully toward other CBers (except the ones who jam, who need to be *ignored* at all costs, because they're usually looking for a reaction), and hope the jammers will find something more useful to do with their time and money. Courtesy is contagious. :)

This would do 100,000x more than any FCC enforcement to clean up the band and make it useful again.

It would be nice to be able to have a CB antenna on the car and not be pegged as a stupid obnoxious redneck or loser for it.

do you live in a house or an apartment? are there any tall pine trees
around? and lastly are you willing to get a base radio?
if you live in a house with tall trees i'd say get an ANTRON-99 put it
in a tree and if you want something more convenient get a cheap used
base or a mobile and hook it to your power supply. i've got 2 radios a
base and a mobile that i picked up for under $15 each.
if you live in an apartment i'd say get a mobile antenna and make your
self a ground plane.
... just one guys opinion in a sea of many.

: Here is a link that you can check out.
: http://www.fcc.gov/cib/inspect.html

I don't need the link - I am well familiar with the FCC web site, as I work with radio systems for a living. But thank you for posting it for the other readers of the group.

When you read it - don't read anything into it that is not there.

For example: Just because it says that the FCC has the right to examine your station at any time does NOT mean that they can force this examination. You risk suffering various penalties if you refuse - but the only way that an examination can be forced is with a search warrant. That warrant would be accompanied by a federal marshal - very humorless individuals who do not accept "No" as a valid response.

Read this, then tell me that the FCC can force an inspection without a
warrant.

: I Did reread it:
:
:>http://www.fcc.gov/cib/inspect.html
:>
:>
:>Q: The FCC Agent standing at my door does not have a search warrant, so I don't
:>have to let him in,
:>right?
:>
:>A: Wrong. Search warrants are needed for entry involving criminal matters. One
:>of the requirements
:>as a licensee, or non-licensee subject to the Commission's Rules, is to allow
:>inspection of your radio
:>equipment by FCC personnel. Whether you operate an amateur station or any other
:>radio device, your
:>authorization from the Commission comes with the obligation to allow
:>inspection. Even radio stations
:>licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio,
:>are subject to the Commission's inspection requirement.
:>
:>I suggest that you reread it if you still don't understand it, then talk to a
:>linguist, its in plain english. What part of it don't you understand?

Let me put it this way - If you refuse, what can the FCC agent do? The answer is that he can only go and get a search warrant. He cannot force inspection without one. Refusal makes you subject to revocation of any license you may hold and subject to a NAL and possible civil fine, as well as the agent returning with a warrant.

And that is exactly what might happen. That warrant will be served by a federal marshall - who CAN force entry to do the inspection. And hiding any illegal gear will be worthless (and probably worse that leaving it easily seen). If necessary, they WILL tear the house apart to find the illegal equipment.

The Q&A is misleading. I suspect that it is intentionally so.

The answer you listed should have gone on to state what I wrote.

: >
: > Jack
:
: Not true,quoted line losses are at a perfect 1:1 SWR,the loss goes up
: drastically from there,especially with coax and that is one reason so
: many people use ladder line.

That is a bit of an exaggeration. With a 2:1 VSWR, the additional loss due to the VSWR is only about 11%. That is rather insignificant.

Ladder line is desired when the VSWR is much worse than 2:1 - such as feeding a 300 ohm antenna using an antenna matcher near the transmitter. Then, ladder line is highly desireable.

it wouldn't be a case of hiding as much as protecting your right to privacy.
what if you got into an argument with a ham who was "real good friends" with
the local field engineer and he had him come to your house for an inspection,
read harassment, to report back to him on personal aspects of your home life
unrelated to radio?
it is within his power for the engineer to walk into your home to "inspect"
your station but not be blindfolded from your front door to the shack door.
i'm not denigrading all fcc engineers but you CAN'T say it can't happen. they
are human too.
this is why i've said if they want to inspect my equipment, i'll move my
station out to the front porch. they CAN inspect my station but nowhere in the
rules does it say they can inspect my domicile.

unless someone slipped something into the part of the constitution that
protects against negative consequences for refusing warrantless searches of
one's private home, i doubt that it would hold up under court appeal.
the only reason it has gone on for so long is because it's been allowed to.
it's like the old question: why does a dog lick himself???
BECAUSE HE CAN!!!
why does an inspector just walk into someone's home?
again, because he can if no one stands up for their constitutional rights and
lets him do it.
it's NOT a question of hiding something, it's a question of reining in
government powers to within the bounds of the constitution. so much has been
lost because it hasn't been watched and more is to follow if people don't wake
up and smell the constitution burning.

i have NO problem with the fcc inspecting my equipment, as you said, without a warrant.
i would be more than happy to bring mine out to the front porch and will gladly hand him an extension cord and a screw driver.
it is in the rules that he can inspect my equipment but NOWHERE is it in the rules that my domicile is a part of my equipment. my domicile, by it's self, neither generates nor radiates any rf energy of any kind so it, of itself, is NOT a part of my equipment inventory or subject to fcc rules as it is not a broadcast station open for inspection.
nothing to hide, privacy rights to protect.

You want to get your conditions for tuning that antenna as close to what they'll be when using it as possible. If you don't use the same coax then you might get your SWR set tolerable on the grond then have it shoot for the sky on the tower.

>>who will be praying if you are not.
>
>
personally, i do believe in the Christian God but that is not my issue here.
when i was in grade school in the 60's, we were asked to stand for a moment of
silence, (which was the only silence the teacher heard all day :)).
there Christians, Hebrews, Hindus, those raised atheist and those who didn't
care.
the teacher did not dictate any prayer or favor any religion. just silence.
it gave those who had a belief a minute to think and reflect on their
activities for the day and those of no belief to just think.
back then we didn't have 1% of the crime in our intercity schools in upstate
new york that we have today all over the country.
the biggest news back then was the fat lip or bloody nose that little johnny
got and the suspension that little tony got for doing it and little tony was
taught a lesson by the suspension and at home.
even in my high school days, if a columbine were to happen, it would have
shocked everyone in the school down to their toenails and if any good could
come of such things it would have dropped that 1% crime statistic even lower.
today, kids have so little respect for parents and teachers that the schools
have become a war zone and the scarry part about it is the teachers can't carry
in kind weapons just for self defense. parents have to be afraid of child
welfare knocking on their door if they look cross eyed at their kids. i have a
friend that, 2 years ago, was threatened by his 17 year old son with a pair of
grass sheers. my friend took a rake handle and hit his arm and knocked the
sheers out of his sons hand for which his son promptly called the hillsborough
county fla sheriffs and had his father removed from his own house for 24 hours
or face felony child abuse charges because he left a bruse on his sons arm.
had he hit his son on the head and killed him, it would have been self defense
as he did have reliable witnessess in his defense but being he loved his son
and didn't kill him, he could have either been killed or went to prison because
this "almost adult" pulled a weapon on him first.
our solders in viet nam were better outfitted to be teachers than the teachers
are today.
today, if some punk punches a teacher, and the teacher hits back, the punk gets
a felony record that, here in fla, disappears as an 18th birthday present
because of the juvenile sealed records law but the teacher carries a felony
child abuse conviction or at least the stigma of "striking a child" for life
along with the possible life-loss of his teaching certificate.

it's funny how an armed punk that asults a teacher suddenly becomes a "child"
when it comes time for that teacher to defend himself.
i love kids, i have 4 and would do anything in the world for them but i
wouldn't last long as a teacher today, doing what would come natural for any
human being who is being accosted by that same punk in a back alley.
well, back to the radio arts.
jeff

Perhaps you signed such an agreement. However, for my CB I never signed or agreed to anything. If such a signature it what they use to get people they're probably crap outta luck with most CBers. I operate my CB station like most hams at least claim to operate thier ham stations. I run as little power as I can and still be able to carry on conversations. That usually means I'm running under 4 watts. A good antenna (stacked threes in my case) goes a long way.

>>
>>> Train

my mother died of lung cancer 3 years ago at home under the care of hospice.
the gave her great care but they CAN'T go beyond the doctor prescription for
pain medication which really irks me to no end because in England, they give
herion addics herion like we use methodone and they arn't terminal.
herion is just one step beyond "legal" pain meds and could bring great relief
but the feds seem to worry more about someone with 3 months to live becomming
addicted than the amount of pain that they are in for their last 3 months of
life.
it is just as addictive as dilaudid but the pain relieving qualities of
dilaudid are much less to the person still writhing in pain 30 minutes after
their last dose and still 3.5 to 5.5 hours from their next.
i in no way advocate the legalization of illegal drugs but if there is a REAL
pharmacutical, pain relieving quality that a near-death patient can derive from
something without twisting it to fit LSD or other such drugs, i'm all for it.
they put mu mother on a morphene pump at a dose LOWER than they gave me for my
back surgery recently. my dose didn't compleatly remove the pain. my mother had
a stroke on both sides of her brain 3 days before she died and was mostly
unresponsive but was still fully aware of her surroundings. we knew this
because she would move her left hand a little in response to yes or no
questions.
how was she susposed to operate a manual morphene pump to respond to her pain
in her condition?
the home hospice nurse said that we would have to operate it for her.
how were we to know when she did or didn't need it? do we wake her up and ask?
i know the nurse was right when she said she was bound by the doctors orders
and couldn't increase it as it would threaten her license for which we could
not fault her.
it just seems stupid to me that the govt. and the med. profession worries more

about such "addictions" when people are so close to death and are under 24 / 7 medical care.
if they won't legalize mercy death, the least they could do is do all things possible to manage pain to the end.
back to the radio arts. that's the way she would have wanted it.
jeff

Did it just fly over your head or something? The above statement of mine, combined with the one immediately following it serve to point out one of MANY reasons why atheism is a generally bad idea. You take part of what was said out of context and make a fairly lame attempt to twist it to say what you want it to. I'll try again in simpler terms, altho it is rather difficult to talk down to people who can't comprehend inteligent logical thought processes.

If you are right, and God doesn't exist, then when we die it's all over. You've lived your life with this in mind and have made the most of life in this world. I on the other hand, have lived my life in a manner that would, according to my beliefs, get me eternal life at the side of God. You probably had a little more fun in this life than I did. But then again, since it's all over I'll not have any regrets.

On the other hand, if you are wrong, and God does exist, then when we die it's not all over. Again, I've lived my life according to my beliefs and assuming they are correct, will be granted eternal life in Heaven. You, again, have lived your life in the belief that this world is all there is and not done those things required for entry into Heaven. You die and wake up in eternal torment for freely choosing to not believe.

> easily thought up by man. No big secret here. Most of
the major
> immoral acts of the world have been done in the name of
some religion
> or another. Just look at your history books a little.

Actually, most of the events you're refering to were carried
out by one or more people who were abusing the power that
comes from organized religion. The Bible has been around
for thousands of years. It's concepts and storys were
orriginally passed down by word of mouth for centuries until
the written word was available to record it. Since then, it
has been copied and recopied over and over. Yet the content
of the message hasn't changed. Even when people take the
oldest known manuscripts written Hebrew, Chaldean or Greek
and translate them directly to modern English then compare
the results to English translations from the earliest times
of the Church there are very few differences. Have you ever
played the old game called gossip? One person whispers
something in his/her neighbors ear and they whisper it in
the next persons and so on and so forth. After 10 or so
whisperings the entire message has changed completely. The
Bible has been thru thousands of such iterations and the
message is completely intact. The only way that can be
sufficiently explained is that it was protected by God.

guess some CBers
> can't understand plain and simple english

Congress never made any law or rule saying that kids in
school should pray at a certain time. Nor did they make a
rule or law that said they had to. Schools where religious
and or people with traditional values were in a position to
set school policy merely provided a time when those who
wanted could pray, those who didn't only had to respect the
right of those who did to do so.
>

>
> I didn't say forbid prayer. anyone can pray at anytime.

It doesn't take a
> church to pray

But forbidding prayer is exactly what's happened. At least
prayer in such a manner where someone else might recognize
it as such. Atheist groups tend to target Christians. The
ACLU is constantly suing the gov't or other organizatinos
for some perceived breach of some groups rights. Yet, when
its the rights of Christians that are being breached they're
usually suing on the side of those doing the breaching.
Case in point: I don't know about other states, but here in
Alabama the churches put up little signs, often blue,
somtimes green, that point the way to the church. These
signs are paid for by the churches themselves, maintained by
the churches, and whenever possible placed on private
property. Yet, the ACLU has in recent years attempted to
sue city gov't for allowing the churches to post those
signs. The amendment that atheists use to support such
nonsense makes absolutely no mention of city, county or
state gov't. It says that CONGRESS shall make no laws
respecting the establishment of religion. Another amendment
says that powers not expressly GIVEN to the federal gov't
and not expressly FORBIDDEN to the states belong to the
states. Well, the power to make laws concerning religion is
expressly forbidden to the feds. That means the federal
gov't can't legally make any law, pro or con, concerning
religion. They can't legally ban school prayer nor can they
legally require it. They can't legally stop churches from
posting little signs, nor can they legally provide those
signs. They can't legally stop school children from having
their meet me at the pole prayer meetings on school property
nor can they legally be actively involved in organizing
such. The only way that amendment can be interpreted any
other way is if the person interpreting it changes the
meaning of the words to suit thier own agenda.

> According to my religion you are going to suffer eternity
for worshiping
> your false jehova. BUT, your religion is no better than
mine in the eyes of
> the law. THATS HOW IT WORKS

It goes both ways, your religion is no better than mine and deserves no special treatment that mine doesn't get. Yet, I doubt very seriously that the ACLU has EVER attempted to stop whatever religion you follow from doing what ever you want. Here's an example of how there's a double standard. Our religion requires us to at least tell others about Christ. If they're not receptive, so be it, we've done our job by planting the seed, if it grows, praise God. Yet, if a Christian teacher attempts to follow his/her religion in that aspect they can lose thier job because of laws that have been passed limiting our ability to follow our religion. Yet some American Indian tribes can legally ingest peyote which is a controlled substance and illegal, because it's part of thier religin. They are allowed to follow parts of thier religion that are illegal, while we are prevented from even discussing ours on public property.

> to me.

Christians who read the Bible for themselves instead of merely allowing some preacher to read it for them don't "keep bringing it up" as you say. I don't know what religion you follow, but if your serious about it, you follow all of its rules and precepts. One of the primary precepts of Christianity is the tell others about Christ. The Bible says that we are to tell everyone we meet. It also tells us that if we meet someone who isn't receptive, we're not to press the issue. That's why I'm not trying to convince you that your religion is false. I know you wouldn't be receptive to it. Now, I'll argue Constitutional law with you all day long, but you wont catch me trying to convert you not that I know you're attitude. Most of the worlds religions believe in some form of punishment for those who don't live by the rules of their religion. For some, it's reincarnation as some lower form of life to be repeated until they get it right. For most of the others it's eternal life in some unpleasant plane of existence. Be it Hades, Ghenna, Tarterus, Hell, or whatever. Even the few that don't have a punishment in some form, do have a reward of some sort. Reincarnation as a rich person, Nirvana, Enlightenment, unity with the Brahman, Heaven or whatever. In my religion it happens to be Heaven and Hell. And in this lies another of the double standards that exists. Christians are often hated by non-believers because of our concept of Hell. However, other religions are at worst made fun of. For example, those religions that believe in reincarnation are laughed at because of the idea that a non-believer might be reincarnated as a cricket or something. Why such a double standard? Because true Christianity says that lots of the behaviors that non-belivers like to engage in will get non-belivers a ticket to Hell. Homosexuality, alcoholism, gambling, pre-marital sex, and drug use are just a few examples. Christianity holds it's followers up to a pretty high standard, and since Christians are human just like everyone else we often fail to meet that standard. However, success as a Christian isn't measured so much in how good a job you do at avoiding sin as it is measured in how honestly you

make the attempt. If a person honestly believes in Christ then they will automatically make an honest attempt to live up to the standard. The problem is that if he fails in any way so that the public sees it they tend to hang him/her out to dry. Such things don't happen to Muslims, Buddhists, Hindus, or other religions. Just Christians and those pseudo-Christian groups that occaisionally pop up and make Christianity look like a bunch of kooks such as the Branch Davidians, Jev. Witnesses and others.

Anyway, I appologize now for going so long on this post. This will be my last post on this topic as it is waaaaay off the topic of this newsgroup.

I'm in need of an owners manual and/or schematics for a Lafayette HA-270 amplifier. This unit is designed for operation from 7Mhz to 29Mhz and gives about 100w with 10w input. Mine worked well for me in a mobile installation until a week or so ago. This amp has to be nearly 20 years old maybe more. I'll gladly pay copying/shipping charges.

Thanks in advance

My point is this, Jeff...you want a no-code band on HF. There already is a no-code band on HF. And it is a MESS because of operators who do not operate according to the rules for that band. By that, I mean the CB rules, not ham rules.

Now, I'm not going to even attempt to guess the percentages of CB operators who do and don't obey the rules of Part 95, because it really doesn't matter. What does matter is that CB could very easily be what you are talking about. The FCC could institute licensing, testing, etc. on 11 meters, expand the band the include the so-called "freeband" frequencies, allow higher power, allow other modes such as FM on part of the band, etc.

The FCC *could* - but it probably never will...and every time you turn on one of your radios and hear a potty-mouth, or a carrier dumper, or a music player, or a bunch of brain-dead idiots having a keydown, or people operating on frequencies other than the 40 they are allowed to operate on, you are listening to one or more reasons WHY the FCC will probably never expand the privileges that Part 95 already grants CBers. There is no reason why the FCC - or anyone else with even half a brain - would think it appropriate to grant additional privileges to users of a radio service where so many of the operators can't handle the privileges they already have.

>yes, i've heard many say, "in case of mic. failure, you can always tap out the
>code".
>this is true but in the last 70 years, they've come a long way in microphone
>technology and they really are much more dependable since the days of the
>carbon crystal mics. this arguement sounds like the paranoid cries of a dooms
>day survivalist.

I've stated my position on the code issue in rec.radio.amateur.policy on numerous occasions, I'm not going to waste bandwidth repeating it here in rec.radio.cb but you can check http://www.qsl.net/kc2fng/ if you want to see where I stand on that issue so that you'll know where

I'm really coming from with the rest of this.

I've had enough of the code argument to make an ape puke. Talking to the pro-coders about no-code licensing on HF is like talking to a brick wall. I have come to the conclusion that, despite all the arguments the pro-coders use to try to justify their position, there is only one argument that really holds water. The code testing requirement for HF privileges serves as a filter of sorts. It keeps the riff-raff off the HF ham bands.

Now, personally, I have no doubt that a CB operator who obeys the rules on CB would be perfectly capable of having a no-code ham license on HF and obeying the rules on the ham bands too. I also have no doubt that the morons who key up on other people, play music, spout obscenities, operate out of band, and generally act like a major ALPHA HOTEL every time they get near a radio, would NOT be capable of obeying Part 97 rules for a no-code HF ham license, anymore than they have proven themselves capable of obeying Part 95 rules.

The problem is that when someone shows up for the written exam for a ham license, the Volunteer Examiners have no way of knowing if the guy taking that exam is a good CBer, a moron, or is someone who has never even touched a CB in his life. Neither does the FCC, upon receiving this person's license application.

We have know way of knowing the nature of anyone who applies for a license. All we do know is that the vast majority of the people on the CB band who act like total idiots on that band claim to not be interested in ham radio because of the code requirement.

I don't know if you fit into this category or not, Jeff...I don't live in Florida and so I don't have the opportunity to observe your behavior on the air. I do know that, having been in my previous post on this thread about the fact that the 6 meter band acts like an HF band and gets the same E-layer skip that HF does, your response was to tell me that you're only interested in HF. Despite the fact that you can do the same thing on 6 meters that you can do on HF - and then some - you're not interested. Despite the fact that you do not need to know the code to get licensed for 6 meters, you're not interested.

So, I have to wonder what it is you ARE interested in...communicating? Or being able to break the rules and thinking you can get away with it because you can blend in with a few thousand other rule-breakers?

>what does these radios and there legal use on 10 meters have to do with the
>bowl? if modified properly for spectral purity, a cb is just as good as any qrp
>ham rig. in some cases, they have the same circuitry.

Yep...the difference is that there is a licensed ham at the controls, who - because s/he has a license to lose if s/he does not obey the rules, is more likely to operate in accordance with Part 97. I never said we couldn't let the radios onto 10 meters - we already do. What we can't allow on 10 is some of the people who operate those radios in

the CB bands - the ones with limited vocabularies who have to resort to profanity to compensate, who play music while others are trying to talk, who...well, I'm sure you get the idea. It's not necessarily the radios from The Bowl that we don't want, it's the operators.

>i have a uniden pro 810-e and a president 2510 which, as far as am / ssb, are

>if i were to change the crystals in it's crystal kit, it would make a great 10
>meter ssb qrp base at a non-parts modified 20 watts pep that it puts out now.
>please don't cloud the issue.

Well, 20 watts is four times what most QRP operators consider to be QRP, but that's beside the point. I'm not clouding the issue, you're avoiding the issue - which is simply that there are a lot of operators on the CB band whose operating practices leave a lot to be desired. To me and to most normal people, a two-way radio is a means of communication. To these idiots, it is a toy to be used to annoy other people. These people are crazy! How do you communicate when you have ten or fifteen people all keyed up at once on the same frequency, using amplified echo mikes that are cranked up so far that nobody can understand a word the operator says? If the FCC ever gives more of the HF spectrum to these jerks on The Bowl, they're crazier than the jerks on The Bowl are.

>it wouldn't be the same because the ones who respect their licenses would
>conform to the rules and the ones who don't would get shut down because
>enforcement is much more strict on the ham bands. i've heard the same stuff
>about stricter enforcement on 11 meters but i've also heard this many times
>before. they come out until the dust settles and go home and it all starts over
>again.

The reason that enforcement is stricter on the ham bands, Jeff, is that the ARS is largely self-policing. If someone got onto a ham frequency and pulled the kind of crap I hear on The Bowl every night, there would be a fox hunt with several amateurs locating the offending parties and they would then receive a letter from an ARRL Official Observer requesting that they knock off the B.S.

If that wasn't sufficient to put a stop to the nonsense, the next step is a formal complaint to the FCC, with possible loss of license, confiscation of equipment, and fines.

You see what happens in this newsgroup when the prospect of that kind of enforcement on the CB band is mentioned here? Instead of a lot of CBers coming out and welcoming any attempt to clean up the band, which might actually lead to CBers getting the kind of privileges on HF that you seem to want...we get s---house lawyers like Hightower telling us the FCC has no authority to enforce its regulations. We get some buttwipe who says he'll sick his pit bull on the FCC agent. We get pinheads like Ice Cream Man who talk the same way in the newsgroups

that they do on The Bowl because that's the only thing their puny little minds are capable of dealing with. Forget trying to communicate with morons like that, because they aren't capable of it. They never got past Middle School, and it shows every time they get behind a keyboard - or a microphone.

If all the CBers who operate within the rules of Part 95 would act the same way when someone abuses their privileges on the CB band that hams do when someone abuses their privileges on the ham bands, in five years the morons would be gone from CB. At that point it would be feasible for CB operators to petition the FCC for more privileges. But the way things are today, forget it...the laughing in Washington would be so loud you could hear it all the way to Seattle.

>i am aware of the no-code tech license but there are people like me with no
>interest in comms above 50 mhz or the 2 meter cb band.

2 Meters is a ham band.

>i can go to a yard sale almost any weekend and pick up an ssb cb for under
>$25.00 and be on 10 meters in an afternoon at no cost considering the size of
>my "junk box".

Waste of time to modify the radio. You can go to a hamfest and get a 10m QRP rig for the same money! But you need the license first.

>i don't talk on 10 but i do monitor and, to tell you the truth, haven't heard
>any conversations that i'd be interested in joining. i know that, at times,
>i've used "colorfull" language here to get my point across but i'm not that way
>on the air but some of the stuff that i hear on ten has valium beat in the
>sleeping pill department hands down.

Well, now that you mention it, Jeff...if you don't use that kind of language on the air, that's good...but why use it here? If you want to be perceived as having something more upstairs than the idiots that ruin the CB band for everybody else, then why talk like they do?

Now that you've stopped parroting the potty-mouth routine of some of the other pinheads in this NG and started to actually make an effort to express yourself in a manner that isn't immediately offensive to others, I'm more inclined to listen to what you have to say, and you do make some sense. A licensed no-code band on HF just might be a good idea. In a way, I even agree with what you're saying. But given the current state of affairs on the CB band, the only way I can see this happening at any time in the next ten years or so, is if the Technician Class privileges in the ARS are extended to include full ham privileges on 10 meters...and that isn't likely to happen because the General, Advanced, and Extra classes will scream bloody murder the second you even bring up the idea.

That is why I ask you to consider getting a Tech ticket, even if you aren't necessarily interested in operating above 50 MHz. If everyone on the CB band who is a responsible operator, obeys Part 95, behaves

like a civilized human being, got a Tech class ham ticket there would
be so many no-code Techs that the call to open up 10 meters to no-code
Techs would carry a lot more weight with the FCC.

>as i said before, i have no interest in vhf / uhf comms.
>i've been in and around 11 meters since 1972 and am still perfectly content
>with it.

Well, if you're perfectly content with it, why are you suggesting the
creation of another no-code band on HF with a license and testing?
Apparently you aren't THAT content with it. :-)

>if i were interested in generating that much power, i could do it on 11 meters.

Not legally, you can't.

>i do that now. it's just not what some would consider "witthin the rules".
>mostly, my interests lie in ssb.

In other words, you're a freebander and are operating on frequencies
you are not legally permitted to operate on. Now, why should the FCC
want to license you on another part of the HF spectrum? Why would it
expect you to obey those rules, when you don't even obey the rules
that apply to your operation now?

>the only difference between me and a "legal" ham is the frequencys used and a
>piece of paper.

That, and the fact that a "legal" ham - or for that matter, a "legal"
CBer - obeys the appropriate FCC regulations...which, by the way, is
the only thing that keeps the entire radio spectrum from sounding just
like The Bowl - adherence to regulations. Without that, we have
complete anarchy on the airwaves, and the entire RF resource because
useless to everyone.

>i, unlike some others, am proud of my equipment and make great efforts to keep
>my radios spectrally pure.
>i get hours of entainment at the challenge of obtaining, modifing, and
>maintaing my radios in top shape.
>i don't take the easy way out and buy already "good" radios and do the simple
>jumper-block mods, i buy cheap yard sale left overs and turn them into
>something really good or it becomes junk box fodder.

If you're operating on unauthorized frequencies, Jeff, it really
doesn't matter if your running technically sound equipment or not, you
are still ignoring the regulations that govern your operation of that
station. Using spectrally pure equipment to violate the FCC rules does
not excuse violating the rules, anymore than my using a sterilized
knife to cut your throat with would excuse my cutting your throat. And
every person who continually violates Part 95 in this manner
figuratively cuts the throat of the entire CB Radio Service by
demonstrating to the FCC that CBers cannot obey the rules and thus
removing any incentive the FCC might have to let Cbers use more

frequencies, use more modes, use more power legally. Why can't you and
others like you understand that?

>if it were up to me, i wouldn't turn "a few more mhz of spectrum into the
>bowl".
>all that i would like to see is a 450 khz piece either above or below cb turned
>into a LICENCED area with the associated privledges for experimenation purposes
>for those who don't want to be a ham. 200 or 300 watt limit, am, fm, ssb mode,
>a technical test and the same enforcement as hams.

I understand that. However, the FCC doesn't. All the FCC understands
is that you can't follow the simple rules they have set up for the CB
band, therefore they have no reasonable expectation that you'd follow
any rules they might set up for a licensed band either.

You're asking that the FCC make it legal for you to do what you are
already doing illegally, and THEN start enforcing the regulations!
What you don't seem to understand is this...why should the FCC want to
create yet another enforcement headache for itself?

When the current CB service was first created, there was a 5-watt
power limit, a 150-mile distance limit on communications, and it was
NOT supposed to be a hobby radio service at all. That was in 1958.
Some 20 years later, the FCC modified its regulations for this service
to bring it in line with actual operating practices on the band. They
dropped the no-hobby regulations. They gave us a no-test, low-power
hobby band. And what did people do with it? As soon as their formerly
illegal operations became legal, they found new ways to operate
illegally. You really think the FCC wants to go through that again???

>you could almost call it a "learners permit" for a ham license. some people
>would get tired of the limited spectrum, power and modes and, by then, maybe
>have enough respect for what a license means and would upgrade the way a novice
>would go tech plus, to tech, to general to extra.
>it could be actually one class LOWER than novice for those who don't want to go
>all out for "full ham".

Learner's permit? More like an entry-level license class. The thing
is, there are already two entry-level ham tickets as it is, and you've
already told us you're not interested in the one that permits HF
operation (Novice) because of the code, and you're not interested in
the one that permits codeless entry into ham radio (Technician)
because the privileges it grants doesn't allow you to operate on HF.
So instead, you want the FCC to create yet another entry-level license
class, and start turning people loose on yet another 450 Khz worth of
the HF spectrum, and let them run 200 watts and bounce their signals
all over the world...but you still haven't shown us that you have any
respect for the operating privileges you already have. You can't even
operate legally under the rules you're supposed to operate under now.
So why should FCC expect you to operate under the rules if it gave you
what you're asking for?

>my wife has no interest in learning the code either but would like to have more
>dependable local comms. than cb offers. it could also be considered a higher
>powered version of FRS. the 2 mile at best FRS just doesn't cut it in some
>cases. these may be good for flea markets and malls but i travel farther than
>that and she is home.

Well, there's an answer to that, too, it's called GMRS. In fact, it
shares some frequencies with FRS, but uses higher power, and
repeaters. And there is no test for a license, either.

>for her, all she needs is basically a higher powered cb and would be willing to
>pass a minor technicalo test to get such a licence. the 4 watt limit was great
>in the begining but is usless now not only because of the real idiots but also
>of the shear numbers of "legal" cb's in use with the advent of cheaper
>technology and the upswing of the new solar cycle.

Well, then she should get her Technician class amateur radio license.
Since you insist on calling the 2-meter ham band "2 meter CB" then
okay, fine, I won't argue with you...that's exactly what it is,
then...so go get your licenses.

>if the license that i proposed were to exist, i wouldn't have to put up with
>the bowl either and a lot more cb'ers wouldn't have to put up with a lot of the
>crap that they have to put up with now as more people,(not all), would go for
>the license so they wouldn't have to look over their shoulder for uncle charley
>as the price to pay for more power or quieter channels.

Which is exactly why there are some 150,000 no-code Technician class
ham operators today. The VHF bands are a lot quieter than the CB
channels, especially when the "skip" is in on the CB band. Thanks to
repeaters, you can use a 5-watt HT and talk to someone halfway across
the state if you want to. And there is no Toilet Bowl either.

>this is why cb'ers have, and still do go over to ham but "all out" ham just
>isn't for everybody.

To me, Jeff, "all out ham" is when you pass five written tests and
three code tests and qualify for your Extra class license. Everything
you've said you want to do communications-wise, you can do on the
6-meter band, but you claim not to be interested in operating above 50
Mhz. Why not? Because you can't use your CB rig there and would have
to buy another radio? If not, it sure looks that way, Jeff...you sound
like you just want to fiddle around with your garage sale CB radios
and can't be bothered to obtain any other equipment, so you're content
to just go on ignoring the FCC regulations and whine because the FCC
won't change its rules to legitimize your illegal operating practices.

And if that's the case, that's not going to buy you any credibility
with me or with the FCC.

>have a good day.

You too, Jeff. :-)

You fail to understand that the rules imposed for CB are unreasonable
due to the fact that the band carries skywave communications. It is
oxymoronic of the FCC to even think about preventing a CBer for
talking to distant stations, especially considering that 4 watt
"legal" stations are landing in your lap from 5 states away. In the
amateur side of things, the amateur license provides for reliable
communications under many different bands.

Again, read above, the privledges are rather unreasonable for the
chunk of spectrum that is assigned.

CB was supposed to be for short range communications; fat chance
being in the middle of a skywave band.

>the riff-raff off the HF ham bands.

Not really true. The real filter is antenna restrictions and
equipment costs. Even if you let everyone get full HF access
with a 100 question test, lets say, I doubt there would be tons of
new people on HF overnight. It takes more capital to set up an
HF station thats worth more than a pile of dirt, too.... so that would

automatically preclude a lot of people from upgrading
anyways. The best way to attack this is to have a second
"extra" test, which has more/harder questions. Perhaps something
with write in answers would be in order. There are lots of
technical folks, engineers, smart people, etc, that want to get into
HF amateur radio but the code is a significant barrier to them.

>have proven themselves capable of obeying Part 95 rules.

Again, for the bands supplied the amateur rules are not unreasonable.
For the CB part 95 is VERY unreasonable given the circumstances.

As far as the assholes are concerned they always will be there, not
much you can do about them aside from stomp on them or ignore
them. Ever listen to 75/80M on a random night? Theres always at
least one frequency that has "problems" on it. (Every night it's
3.950, and other frequencies at random)

>

Cross-posted to: rec.radio.cb,rec.radio.swap

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connection as well. Uses 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

And if a frog had wings he wouldn't bump his ass on the ground every
time he hops.

Yeah, the guy was an idiot. But in case you haven't noticed idiots are
everywhere. I had two guys 'quick keying' on a local HAM repeater
while I tried for over 9 minutes to break into get an emergency call
through. After 2 or 3 minutes I gave up exclusively trying, and
alternated with a 'long distance' machine I finally got through on. The
end result was the emergency call was not in time, a total loss. Could
it have been prevented? Who knows, I never got the chance. Once
I got through though, I eventually went back to these guys, and FINALLY
they left a break, and I spoke my mind. I'm sure it did a whole lot of
good, but it did make me feel better.

One time in Dallas I broke in on a converstation for an emergency.
One of the individuals chastized me and basically wanted me to
'prove' it was an emergency before he would relenquish space.
I made the call, and formally complained about him. I got a VERY
appolgetic letter from the club involved, with real signatures from
all their officers and a detailed outline of how that would be prevented
in the future. The club handled it very well, in my opinion.

There have been numerous fines and cases published over the last umpteen
years. I assume that there must be some level of court involvement at
some point. It's not the same as the OJ trial, but there needs to be a
court involved to enforce any fines, or to mediate any challenge.
SOMEBODY has to hear the evidence and make the judgement call.

> Most individuals are bullied into stipulating to the FCC's demands

True to a point. Intimidation works in many cases. But if you ARE in the
right, you can fight and win. But if you are cought with your hands in
the cookie jar, and the FCC has the goods on you, don't think that by
fighting, you will overturn their judgement. You may be successful at
having the fine reduced, if you can prove financial hardship.

> However, what will be very interesting to see is the outcome of a Ham called

I am unfamilair with the particulars of this case, so I can't comment.
But as far as I'm concerned, if there isn't a rule specifically
prohibiting a particular action, then the action cannot be cited as
illegal.

> You know what? The
> FCC cant, so they are now back-peddling. These guys are determined to

I agree that "bully tactics" only work if you do not understand the
principles of law. But as far as the scope of this original discussion,
if you DO willfully violate written rules, you should not be surprized
if you get tagged.

> his 8 pill box (unless he's disrupting some sort of public communications
> with his transmissions).

You're right, it doesn't happen overnight. Usually the FCC will take
their time, and build their case, by silently monitoring the illegal.
Usually the illegal will be operating long enough that the FCC will have
no problem determining that the equipment is illegal. Once this evidence
is presented to a judge, there is usually no problem getting the
probable cause to have a warrant issued. It happens all the time.

The FCC is not going to announce on the air that they're monitoring. You
could be happily working DX on 27.555, running 500 watts, and be totally
unaware that the FCC "van" is recording your contact, making ERP
measurments, and frequency. It will be pretty hard to counter their
evidence, especially if they come to your door, with warrant in head,
and US marshalls, and find the illegal equipment.

>Hams are a bit
> > different in that respect.
>

No, hams understand how the FCC works, and generally have more respect
for the rules.

> Wrong Dave. No one has to agree to an "on the spot" inspection. Again most
> Hams agree to an inspection by their own will but no one has ever lost their
> license for NOT letting the FCC in their house immediately.

The FCC is an administrative agency that has the power to issue, suspend or revoke your operating license, much the same as the DMV does with respect to driver's licenses. The FCC can suspend or revoke your license for any reason that they choose, if you do not follow their rules. One of the rules is that you have to agree to let their man in to inspect your station. You can say no, and the man will leave, but you WILL lose your license, for breaking that rule. Read some of the many published cases, in a few there were incidences of hams not allowing inspections, and their licenses were pulled as a result. In some of these cases, the ham was able to "bargain" for his license back again, after agreeing to other conditions, but the FCC CAN and WILL pull your ticket, if they choose to.

Now, you can say "F*** the FCC" and operate without your license, but then they can pop you for operating without a license, which has a greater fine. CBers have no license to pull, so the FCC has to issue citations, and NAL's, and make their case to whatever legal branch oversees their operation.

I have read them. S9 magazine used to print a collum, called "Washington
Outlook", where FCC actions against CBers were published. I read them
then, and I still see them from time to time. I've been personally
involved with tracking ham jammers, and saw what the FCC did when they
finally caught one of them. Not all of them involved failure to allow
access. Usually, when they go after someone, like I've said before, they
have the warrant and the US Marshall, so there is no arguement.

Again, there is a difference between proving that a particular action is
enforcable, as illegal, and other actions, which are clearly illegal,
that people try to fight.

All I know comes from experience. I can put a 2950 on the bench hooked to my generator, and a 148, and the Ranger works down to a lower microvolt signal. The first stage coil is sensitive. If you tune the coil improperly, you get more signal, but a heck of a lot more noise as well, and the signal/noise ratio gets worse. If you set the 1st stage properly, the 2950 has a usuable signal down to .15 uV. The 148 is about .25 uV. Because of the varactor tuning, the sensitivity bandwidth is also greater. I can optimize the receiver for CB, and still have good sensitivity on 29 Mhz. The 148 won't do that.

The AGC on the 2950 is pretty poor though. I've had to change many of the feedback resistors, so that the radio does not overload on strong local signals. It now only overloads if someone is as close as one or two car lengths. I like it that way as it gives me an instant clue how close someone is, without me having to look at the meter.

You did not have to sign anything, the first time you keyed up, you
agreed to make your station available for inspection as per FCC rules.

1954. Who's the clown on 27.435 who babbles about BUTT DABBLERS?

Anyone else hear this guy yesterday? Claims to be in Hershey, PA. Apparently has an axe to grind with a group of operators in Abilene, TX. Repeatedly referring to them as "a bunch of butt dabblers who floss their teeth with each others anal hairs." Over and over again, just like a broken record, for several hours.

Good place for Riley to start is with this guy, eh?

Evidently, you have never been inspected, well, it don't work like the
outhouse lawyers tell ya. Mr. FCC will come to your door, knock and
when you answer, ask to inspect your radio gear (They have usually DF'ed
you and "fingerprinted" your transmitter on an scope, so there it goes.
At that point the FCC will show you his Federal ID and badge. YOU MAY
REFUSE, HOWEVER, he may cite you with an NAL (notice of apparent
liability) for "Lack of Candor," at this point it gets dicey because
then Mr. FCC is left with two options, 1. Warrant 2. Get Federal

Attorney to Collect NAL. Option is simple, Mr. FCC gets Warrant, gets braun from 3 letter federal agencies and commences to search. Option #2 is death by slow means, usually years, as the Federal Government tries to collect "Fine" which usually ruins your credit record, places a federal lien on your property and costs you lawyer bills and headaches as you try to explain "Constitutional Rights" to a Federal Attorney and Judge who are not impressed.

By the time the FCC is at your door, they usually have done their homework, know more about you than your motherand have your name and MO (modus operandi) for future reference.

: Third floor or not, you have to ground that thing!

I know I asked this a while ago, but I wasn't sure what was the best thing to do, out of all the responses I got. One suggestion was to ground it to the screw of a power outlet, but that would introduce electrical noise into the radio and vice versa. Grounding to a water pipe seems to be the next thing to do...I'm not sure if this will work though.

This helps the static electricity, but it doesn't address the need to properly ground. Groundin gto the cold water pipe would beat nothing if the water pipe actually gets out beyond the building some distance, but they often connect to plastic and don't work well. Any chance of dropping a stealth wire out the window to the ground??

if cb were abolished like some people would have, there would have been no radio to warn anyone with anyway.
just because the IDIOT was using power is irrelivant. he could have been barefoot and right behind the trucker and still could have caused enough interferance to get the same effect.
VERY TRUE the guy was an IDIOT but power was not nessessarily at fault.
if caught, he should be charged with willfull interferance AND, in civil court, be charged with neglegance in causing a death. what ever the case, it shouldn't have happened.

Depends on who you talk to.... Some people want you to beleive that
it'll do 500-600 on a deadkey... which IMHO is a bunch of BULL..

If it's driven the way it's supposed to be, and not all tight and
stuff 300 swinging to 500 is about normal for a 4 pill box.

I need a sideband radio. It doesnt have to be the best radio. What is a low priced radio I can buy. I will buy a used radio if someone has one for sale.

"ham" rules are neither here nor there with me as i have no interest in
learning the code. my interests lie in hf communications of which i'm locked
out of because of a license requirement for a mode of communications that has
long out lived it's usefullness.
yes, i've heard many say, "in case of mic. failure, you can always tap out the
code".
this is true but in the last 70 years, they've come a long way in microphone
technology and they really are much more dependable since the days of the
carbon crystal mics. this arguement sounds like the paranoid cries of a dooms
day survivalist.

>>if the itu / fcc would drop the code requirement altogether, it WOULD be
>>cheaper to buy a cheap cb and get it up and running on 10 meters than it
>would
>>to buy a uhf / vhf rig.
>
>Yeah, right, and then 10 meters could sound like The Bowl? No thanks.
>
would you tell your tech plus friends this when they also, in some cases, use
modified cb's for 10 meters?
what does these radios and there legal use on 10 meters have to do with the
bowl? if modified properly for spectral purity, a cb is just as good as any qrp
ham rig. in some cases, they have the same circuitry.
i have a uniden pro 810-e and a president 2510 which, as far as am / ssb, are
almost identical inside. i can do the same power mods to the 810-e as can be
done with the 2510 with the exception of the power supply in the 810-e would
have to be beefed up dramatically.
if i were to change the crystals in it's crystal kit, it would make a great 10
meter ssb qrp base at a non-parts modified 20 watts pep that it puts out now.
please don't cloud the issue.

>

>
>Yeah, right, just like they did on the CB band.
>
it wouldn't be the same because the ones who respect their licenses would
conform to the rules and the ones who don't would get shut down because
enforcement is much more strict on the ham bands. i've heard the same stuff
about stricter enforcement on 11 meters but i've also heard this many times
before. they come out until the dust settles and go home and it all starts over
again.

>
>>another option would be to open up a codeless band between 26.515-26.995 or

>50 MHz and above. And, if you go to a few hamfests, you can pick up
>inexpensive used radios for these bands often for the same price you'd
>pay for a good CB rig.
>
>
i am aware of the no-code tech license but there are people like me with no
interest in comms above 50 mhz or the 2 meter cb band.
i can go to a yard sale almost any weekend and pick up an ssb cb for under
$25.00 and be on 10 meters in an afternoon at no cost considering the size of
my "junk box".
i don't talk on 10 but i do monitor and, to tell you the truth, haven't heard
any conversations that i'd be interested in joining. i know that, at times,
i've used "colorfull" language here to get my point across but i'm not that way
on the air but some of the stuff that i hear on ten has valium beat in the
sleeping pill department hands down.
>
>>a kind of middle ground for people who want more than cb but less than ham.

>
>
as i said before, i have no interest in vhf / uhf comms.
i've been in and around 11 meters since 1972 and am still perfectly content
with it.
>The power limit on 6m for Technicians is 1500 watts PEP, by the way.
>
>
if i were interested in generating that much power, i could do it on 11 meters.
the "legal limit" for tech at the no-code level has no draw for me.

>In addition to that, you get to work VHF/UHF FM repeaters and simplex,
>or operate your own repeater station when you get bored with using
>someone else's. You can try working DX by bouncing your signals off

>
>
i'm sure that these modes and paths are interesting for some but, again, not me
thank you.

>
>Of course, if all you want to do is chat locally on AM with some
>friends, that's fine too, as long as you all have the appropriate
>license and operate within the FCC rules.
>
i do that now. it's just not what some would consider "witthin the rules".
mostly, my interests lie in ssb.
the only difference between me and a "legal" ham is the frequencys used and a
piece of paper.
i, unlike some others, am proud of my equipment and make great efforts to keep
my radios spectrally pure.
i get hours of entainment at the challenge of obtaining, modifing, and
maintaing my radios in top shape.
i don't take the easy way out and buy already "good" radios and do the simple
jumper-block mods, i buy cheap yard sale left overs and turn them into
something really good or it becomes junk box fodder.

>

>Bowl and get a Tech license. The test is not that difficult, and the
>privileges you earn when you qualify for that license are well worth
>playing by the rules in order to keep 'em.
>

>
if it were up to me, i wouldn't turn "a few more mhz of spectrum into the bowl".
all that i would like to see is a 450 khz piece either above or below cb turned into a LICENCED area with the associated privledges for experimenation purposes for those who don't want to be a ham. 200 or 300 watt limit, am, fm, ssb mode, a technical test and the same enforcement as hams.
you could almost call it a "learners permit" for a ham license. some people would get tired of the limited spectrum, power and modes and, by then, maybe have enough respect for what a license means and would upgrade the way a novice would go tech plus, to tech, to general to extra.
it could be actually one class LOWER than novice for those who don't want to go all out for "full ham".
my wife has no interest in learning the code either but would like to have more dependable local comms. than cb offers. it could also be considered a higher powered version of FRS. the 2 mile at best FRS just doesn't cut it in some cases. these may be good for flea markets and malls but i travel farther than that and she is home.
for her, all she needs is basically a higher powered cb and would be willing to pass a minor technicalo test to get such a licence. the 4 watt limit was great in the begining but is usless now not only because of the real idiots but also of the shear numbers of "legal" cb's in use with the advent of cheaper technology and the upswing of the new solar cycle.

>Of course, if you can't obey rules, then just stay down there on The
>Bowl and keep getting squashed by the other overpowered, overmodulated
>birdbrains with nothing important to say and a lot of wasted equipment
>to say it on to people who are too busy running their own mouths to
>listen anyway.
>
>
if the license that i proposed were to exist, i wouldn't have to put up with the bowl either and a lot more cb'ers wouldn't have to put up with a lot of the crap that they have to put up with now as more people,(not all), would go for the license so they wouldn't have to look over their shoulder for uncle charley as the price to pay for more power or quieter channels.
this is why cb'ers have, and still do go over to ham but "all out" ham just isn't for everybody.
have a good day.

i work in a warehouse that ships our product world wide by truck only to boat docks, across continental / national boarders etc.
you'd be suprized at some of the junk radios that these truckers hook up to these "10kw" antennas.
the antennas cost more than the radio did new and most don't even OWN an amp.
if i had a swastica flag hanging from my front door, it wouldn't mean that any illegal activities were going on inside.
some of these truckers care more about the looks of there trucks than they care about their onw health.
there is no law against vanity run wild and i seriously doubt that any federal judge would risk looking foolish by issuing a warrant to bust a 2 watt junker just on the looks of an antenna and yes the fcc does need field strength readings, key signature or voice prints to back their case.
otherwise there could be laws made for being ugly which would be the case here.
a 7 foot firestick can easily handle 1.5kw but is this justification for the inconvienance of a search?
i don't think that would hold up on an appeal. worse things have gotten by on this technicality.
worse yet, if it didn't hold up, the fcc would be open for a malicious prosecution suit.
they can't afford to do their jobs now let alone defend a suit over an "ugly" antenna.
think about it.
jeff

>buddies with the desired warrant.

You know that. *I* know that. However, I think there are a lot of
people out there who *don't* know that...and then we have outhouse
lawyers like Wildcat who don't know from shinola telling people they
can defy an FCC request to inspect their stations and get away with it
scot free by waving the Constitution in their faces, and that is just
plain NOT the case.

Furthermore, each person who becomes informed of the facts as a result
of reading this discussion and is thus encouraged to operate legally
in order to avoid getting slapped with a NAL, represents one less
person out there screwing up the band for everybody else. The aim here
is the same as that of the FCC - namely, compliance with the
applicable regulations.

But in response. Like I said. You can be written a ticket by GSP for 56 in a 55. I'm not saying it's going to happen or that you will even get convicted for it, I'm saying you can get a ticket for 56 in a 55 by GSP. Isn't that correct? You do sound like the authority. So I'm taking advantage of the situation and asking you. I was 99% sure that I was correct about this situation. I am under the impression GSP can write you a ticket for violating any law to any degree. If not, then going 56 in a 55 is at least P.C. (probable cause) to pull you over, and find some dope in the car :)

Years ago, when I was 19, I got a ticket from GSP. The ticket said 63 in a 55. Granted, it was dismissed in court, I still got the citation from the officer!

: >long out lived it's usefullness.

I doubt if anyone is locked out of learning the code at 5 wpm. You can receive almost that fast after you memorize the code. People who are 5 years old have managed - deaf people have managed - blind people have managed. I doubt if you have any less ability along that line than some of them. It might take a year of 30 minutes practice per day, but that would be rare. Many manage by taking a class from an Amateur Radiio Club - and pass the code within a month.

: My point is this, Jeff...you want a no-code band on HF. There already
: is a no-code band on HF. And it is a MESS because of operators who do
: not operate according to the rules for that band. By that, I mean the
: CB rules, not ham rules.

Yep. And a lot of the CBers that disobey the CB regulations are Hams. I have known several. They don't use noise toys, power mikes or trash linears - but they use Ham gear, usually run at full output - often out of band or between channels.

: The reason that enforcement is stricter on the ham bands, Jeff, is
: that the ARS is largely self-policing. If someone got onto a ham
: frequency and pulled the kind of crap I hear on The Bowl every night,
: there would be a fox hunt with several amateurs locating the offending
: parties and they would then receive a letter from an ARRL Official
: Observer requesting that they knock off the B.S.

And often nothing happens. The OO can only make a request - they have no enforcement powers. Witness the trash on some of the Ham frequencies that is as bad, or worse, than what you hear on the CB channels.

: If that wasn't sufficient to put a stop to the nonsense, the next step
: is a formal complaint to the FCC, with possible loss of license,
: confiscation of equipment, and fines.

See above.

The Yaesu's have a noise blanker - at least, all those I have seen.

The one in the FT-101E/EX/EE is pretty poor. The one in the FT-101ZD is
rather good - as is the one in the FT-757GX.

The Kenwood noise blanker seems to be fairly good, but not great.

Can we convince you to come teach in Michigan? :-)

Actually, I think the 4 MPH over the limit was the most minor
part of the reason for the ticket. I went for almost 40 years of driving
without _ever_ receiving a ticket (not that I never _deserved_ one, but
I never _received_ one). Then I bought a new car. Two years. Two tickets
(one for 4 MPH over, one for a "rolling stop").

Always bought a gray, white, or bronze car before. Not this
time.

The car is "arrest me" red.

>letter writing campaign...

I think the obvious problem with this debate is that apples and
oranges are being argued.

A LEO with a warrant can enter a home to search for evidence of
a crime _without_ either the permission of the owner OR any proof that
the owner had the evidence on the premises (assuming s/he can convince a
judge that probably cause to believe the evidence is present does
exist). Thus if someone is suspected of committing a homicide, his/her
home can be searched for the murder weapon without any proof that the
weapon has _ever_ been on the premises.

An FCC official, on the other hand, cannot demand that the
station equipment be made available for inspection unless s/he can prove
that illegal activities occurred at that location. In other words, an
FCC official can view an antenna connected to a building, have reports
in his/her hand by other users of the frequency that specific offenses
had occurred, but still not demand access to the equipment unless s/he
actually detects a radio transmission originating from the location _at
the time._

These are _not_ equivalent situations. In the first case, the
existence of the evidence is pure conjecture based on the facts of the
crime; in the second case, the transmission could _not_ have occurred
unless the equipment (evidence) was on that site and in use at the time.

Thus the correct comparison is not to a LEO with a search
warrant, it is to a LEO who witnesses a crime being committed in which
immediate action is necessary in order to preserve the evidence trail.
In such a case, a warrant is not required for entry.

In the case of the FCC, because they lack the legal status of
Law Enforcement Officers, they cannot force entry to prevent the
destruction of evidence (i.e., removal of the illegal equipment). But
having evidence of the commission of the offense, if the resident
refuses them permission to inspect the equipment (and thus to confirm
that it is _not_ illegal which would end the matter immediately), the
burden of proof immediately falls to the resident to demonstrate a
compelling reason why the station could NOT be inspected.

The comparison would be far more accurate if made to the right
of a LEO to require a test for intoxication when s/he observes a
motorist driving in an erratic and apparently intoxicated manner. Most
states have laws that require the suspension of the driver's license of
any driver who refuses such a test since one condition of driving on the
roads of the state is that the driver provides tacit agreement to submit
to such a test.

well there are different degrees of punishment, just like there are differing degrees of reward. you are virtuous in your own mind , but you are not good enough to meet a perfect God some day when you die. He hates sin. a good virtuous man will go to hell without being covered with the blood of Jesus Christ, but it won't be as bad for him as say a serial killer who dies with these unconfessed sins in his book of life. when adam sinned he condemned us all , and only the blood of Jesus will save you from spiritual death. If Adam had not sinned there would be no death and a lot of people would be living in the world in peace. There would be no sin of any kind. The blood of Jesus blinds God to a believer's sins. we are spirits living in a body that dies but your spirit lives forever. if you know anything about Jewish traditions, this was patterned by God , after the Jewish tradition of sacrificing an innocent , unblemished lamb for the atonement of sins of Israel. So Jesus, the Son of God gave up his life willingly on a Roman cross as a way for God to allow us to be reconciled to him, because we could not and would not do it according to the law. There is only one God and there is only on way to God. Jesus did not replace the law but fulfilled it. He was the only one that came and said that He was the son of God, did miracles and arose from the dead. No other man ever did these things. He was God in a human body. He did the things he did to teach us the way. Jesus was our unblemished Lamb. it is up to us to accept this. That being said, it is necessary to say that we all have a will. The angelic host do not understand this. They were manufactured beings for the express purpose of worshiping God. We have a will and we have a spirit. The angelic host marvel at our options. Who so ever will may come. It is up to you. I know this and always have. I was raised in a church family. I wondered and I came home. It is possible to live your life according to Godly principles and everything will work for you but you will end up in hell , just the same. Godly principles such as virtuous living and living according to the law do not save you . It is confession of faith in Jesus Christ that saves you and not ourselves. I believe this with all my heart. I am not perfect and I do not claim to be. But the time is coming when such words as I am saying now , will cost me my life. Maybe it will come to this sooner than I anticipate. I hope not, but the times they are a changin. The tribes, they are gathering. The wheat and the chaff are being seperated on the threshing room floor. Just look around you at what is happening. Just a thought, icm out.....

If you refuse, then there is *no* need for an inspection. You're then guilty of violating the conditions of your license. They have you either way, Bill. Pay up.

Back to the CIB web page:

Q: The FCC Agent standing at my door does not have a search warrant, so I don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters. One of the requirements as a licensee, or non-licensee subject to the Commission's Rules, is to allow inspection of your radio equipment by FCC personnel. Whether you operate an amateur station or any other radio device, your authorization from the Commission comes with the obligation to allow inspection. Even radio stations licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio, are subject to the Commission's inspection requirement.

>assorted gazzillion watt channels, The Bowl is a very appropriate name that
>you
>boys have given the CB.

The Superbowl (channel 6) as it is called has been called that since around
1965.
It is called that simply because it is a COMPETITION CHANNEL. And it is ONLY
for those that have a very serious interest in power and competition. If you
are a regular cb user with a small amp or none at all I would strongly suggest
you avoid channel 6 and play on any of the other 39 channels. That would be
best since you would not be heard on the SUPERBOWL!!!!!

In the cases publicized here in Hawaii, a US deputy marshal accompanies
the FCC agent, and it's the marshal who forces entry. Latest case was
a pirate broadcaster. The marshal cut through the locks. The bad guy
lost all his equipment, including even the antenna and feed-line.

Well it's been a long time so let's see....
I think they should be approx 6 feet apart and tune the front antenna first and then place it in the back and then stick another antenna in the front and tune it. Front antenna should be apprx 5% shorter than back antenna.
More specifics please try email as it is too long!!!

>So that excuses out-of-band operation?

Yeah it does, cause you can't get across town when
the band is open; the "purpose" of the CB service is
for short range communication.

> That excuses deliberate
>interference with other stations?

How might we use, the words, "accidental" interference
with other stations? Or better yet, you have fun trying
to ward off the mexicans that are all over the band.

> That excuses deliberately ignoring
>the legal power limit?

4 watts is not enough to get across town with a mobile
when the band is open. I can barely get across town with 600W, the
mexicans will pulverize your signal. On the legal 40 band 4 watts
ends up in a sea of mush with the rest of the signals.

>That excuses the use of profanity on the air?

No, assholes will be assholes. Nothing you or I can do to prevent
them from using profanity.

>>>is only one argument that really holds water. The code testing

>

I'm not talking just radios. It takes a good parcel of land and a
tower or two get signals out there that would even be considered
useable. Sure you can hang wires off trees but not everyone
has trees to hang wires off of. You also need neighbors that are

about 100-200 feet away to eliminate or minimalize interference.
Even with the cleanest station, you WILL interfere with some of their
crap, that's inevitable with the cheap electronic junk thats around
in the consumer market. There is simply no escaping that. I can't
think of one ham that was able to get anything more than QRP out
without running into some type of interference problem.

>As far as antennas are concerned, you can buy a used antenna tuner at
>a hamfest, get a G5RV from MFJ for a whopping $30, add some coax feed

>go on 80 through 10 meters for less than most CB antennas cost. Or if
>you're that strapped for cash, buy a roll of wire and build yourself a
>dipole.

Yeah, and on 10-20 meters you basically have a mediocre
signal. 40 and 80 work better, but the lightning crashes will
kill 100watt stations with aplomb.

Oh, and btw... G5RV = "antenna which works equally poorly on
all bands" good for a pinch but it's nothing to brag
about.

>
>>Again, for the bands supplied the amateur rules are not unreasonable.
>>For the CB part 95 is VERY unreasonable given the circumstances.
>
>What is unreasonable about expecting people to operate ONLY on the

>frequencies authorized by the rules?

Because skywave prohibits reliable local communication. Even those
of us who do not wish to use skywave are exposed to it. It is
unreasonable to expect folks to stay within the allocated band.

Perhaps you dont understand, there are no more OPTIONS for the
public to use reliable short range communication at modest
cost.

And dont say GMRS, cause that's the biggest load of shit radio
service I've ever heard of. The licensing fees are astronomical and
the limitations imposed on the liscense are horrible, making it very
usless.

FRS is a neat idea but its "short range" is much shorter than the
range one could attain on the CB band with perfectly legal
equipment. (on a quiet day)

>
>What is unreasonable about expecting people to avoid deliberately
>interfering with other stations?

Well, in order to prevent interference while the band is open, your
basically telling people that they could not operate their
cb radios, legal or otherwise? Who gets to choose who
operates and who doesnt? Are we going to have some kind of a
lottery which determines what stations can use what channels when
the band is open?

>
>What is unreasonable about expecting people to stay within the legal
>power limits for the mode they are operating in?

I'm not going

>
>What is unreasonable about wanting people to avoid using profanity on

Theres nothing unreasonable about this, but this is common sense and
has nothing to do with part 95, really, this is a social issue more
than anything else.

>What does the limitation on communicating with stations beyond a
>certain distance from your own station have to do with the moron who

>the FCC. So, you see, there *is* something that can be done about
>them. Like the old saying goes, "If you're not part of the solution,
>you're part of the problem."

Yeah, the FCC canned the licensed jammers who publicly announced (and
identified themselves) that they were jamming the frequency. That
took a real lot of skill, hell, some of them are STILL OUT THERE
jamming various frequencies.

So you really mean, a PREVIOUS enforcement action. They canned some
of the 3950 dweebs like sidney,etc..and then they harassed K1MAN
and W1WCR and other folks for no logical reason other than
out of internal prejudice by mr hollingsworth.

>Want to get rid of them on the CB band? Start sending in complaints
>about illegal operation to the FCC. Gather your evidence first - make

>act, a complaint will be filed with the FCC.

What kinda crack are you on? I want some. The FCC DOES NOT CARE
about CB violation complaints, period. We had 50 man petitons, tape

recordings, etc, to get people off the air, never worked. People
gave up.

>If they continue to operate contrary to Part 95, complain to the FCC
>and supply them with your evidence.

Again, stop smoking that crack, John. This doesnt work, please
enlighten me and show me more than one instance in east bumcrap
where this actually worked. You seem to forget that there are 4
million plus CB operators.... lets say 200,000 of them are real
assholes/problem kiddies. Well, so far, about 100 have been busted.
That's not very effective enforcement.

Oh, and out of that 100, probably 70 of those guys were doing
something else to piss the FCC off, namely things like bleeding
over police or other public safety radio services. I could run 10K
on the CB all day. I could run it till I turn old and grey and

die, and not get caught. I WILL get caught if I ran that 10K next
to a police station or in the vicinity of other public safety radio
systems. The FCC takes quick and effective action on these
kinds of calls.

>
>That's how it works on the ham bands, and that's how it could work on
>the CB band if enough people were willing to get off their butts and
>do it instead of whining about it and doing nothing.

Doesnt work on the ham bands. Apparently you seem to forget that
jamming persists on 75/80M at night, on various frequencies. 20M
during the day ends up turning into a kiddie band sometimes
too.

>

>ham bands, now do I? And neither do any other hams I know...so why
>would we want to make it any easier than it already is for those
>morons to get a license?

They wouldnt follow you onto the ham band. They have no
interest in it. I could hand out extra class HF tickets to about a
dozen cbers right now and all but 3 of them would stay on
27 mhz.

Please remember, that any joe off the street could get an HF radio
and start talking on the HF amateur bands. The equipment is
readily availiable. Why arent all the "cbers" there? Well, guess
what, their friends dont have money for HF rigs. the existing users
are pretty passive to jamming attempts, etc, etc, etc. It's harder
to get HF mobile antennas for "longer" bands runnign correctly
and so forth. The know-how and capital is just significantly
more. It's unknown terrirtory and most cbers dont want to explore

it because they're simply not familiar with it.

You must remember that the radio hobby as a whole is decreasing in popularity. Eventually (and possibly unfortunately) amateur radio will end up becoming deregulated due to lack of interest, unless the ARRL rolls out a big red carpet and has a parade. As far as the public is concerned, all amateur radio is, is a hyped up version of the CB service.

You know why the ARRL brought on no code? To prevent radio as a hobby from dying. They need to open the doors fully otherwise there will be NO regulation whatsoever, due to the fact that the general interest in radio is decreasing. This is true both on the

CB and Amateur radio side of the coins. The saturation will hit an all time low and both groups will be able to exist peacefully in a deregulated state because of the sheer lack of population..

You know what is interesting, though? With the advent of computers and internet access becoming cheap, the assholes of all radio services are migrating onto the internet en masse. So far many of the assholes that were on the CB in this area picked up a computer and hopped on AOL. Computers are too easy to use these days so even an illiterate, welfare collecting cb operator can get online and harass people in chat rooms. Also, in the near future assholes will have other means of annoying people as opposed to a CB radio.... with DSS radio systems, having a "cb style" trunked communications system isn't a far fetched idea. Actually its happening now in a controlled sense.... but I wouldnt be surprised if nextel starts opening up "public" channels for driver information,etc, which will turn into a zoo.

Instead of bragging about the chrome on their radios or their roger beeps they brag about what kind of junk is in their computer and so forth. So they come on here and play people like "rfenforcer" and other dorks.

Who will be left on CB or amateur radio? the folks who love to use it to communicate and experiment with.... In the most absolute sense, the communications that CB and amateur operators use to communicate are based on seemingly ancient, antiquated technology. The people left with the big stuff will be the antique collectors of hobbyist communication.... everything commercial and military is about 10 times higher on the techology ladder then any recreational communications are. The pheds have been dicing and slicing signals in ways that 95% of most people are not even remotely aware of. Commercial entities such as motorola have been digitizing crap for the longest time. None of these advanced technologies ever make it to amateur radio. It used to be hams invented technologies but that period of ingenuity seems to have died a long time ago, with the last vestige being the smelly slow assed packet radio network which was usurped by even

half baked satellite data rigs or LEOs .....

I think there will still be some retards around but the die hards who
are still around. Nothing stops those who are persistent. They
will have more than enough power to slap the retards off theair or
they will get in shape. I estimate there may be some folks that
will still be festering around the regular 26-27 mhz band
at large but membership will go down in a chain reaction. then level
off again for a very long time. Truckers and people who work with
vehicles, etc, will still use the CB as a source of highway
information and so on, merely because it's
been accepted practice. (unless something like a common DSS channel
on portable fones replaces channel 19.....)

-Mike

Well first of all, you don't need to worry about the FCC where you are
Matthew. The Federal Communications Commision is a bureaucracy that because
of our increasingly socialistic government, is really starting to get the
funding and power that it craves. Down with freedom.
You are safe in the UK. for now hehehehehe!

Trent,

You are correct. GSP is not obligated to comply with 40-14-8. However, that only applies to RADAR enforcement. The 63 in a 55 was a valid citation. But as you know from my previous post, That's just slightly over the minimum that I'd recommend writing a citation for. Years ago, I was written a citation for 68 in a 55 by a West Virginia Highway Patrolman. I argued that I was going down hill and the speed got a little away from me. (didn't work) :-)) That one cost me $25.00.

I was being facetious when I asked about a CB License.

The point I was trying to make, has nothing to do with me personally. I know that my ham license covers me. I'm concerned about the LEGAL CB operators, that have no license, but do their best to run legally. THOSE people can still be harrassed by overzealous cops that do not know how to isolate interference complaints, and assume that EVERY operator that causes interference HAS to be illegal. These legal operators still face equipment confiscation, legal hassles, and spent money trying to "defend" their hobby, and to retrieve wrongfully seized equipment, without due process.

I have no problem with law enforcement confiscating PROVEN illegal(which would require some technical expertise) equipment. I DO have a problem with a "seize first, make them prove it isn't illegal" approach.

Sorry about that Bob--I must be 1/2 asleep! I read your response again & realized that Adrian was the dork, & you are the "crack Baby" !!! Actually "crack" or drugs or Alchohol was the cause of NO metal base station antennas being made today (5/8 wave). These drunks & druggies in the late 70's were getting smashed & put up base antennas & hit power wires & the lawyers & insurance companies came up with this communist law form called "product liability" that caused us to not have these US made 5/8 wave metal base antennas (unless you got Underground ones!). I guess the answer to the question is 10 OHMS or less on the Ohmmeter, which is NOT what I have, so it is bad! Thanks !!!! Dave!!!!

Radio shack has a small wireless mic that plays via FM radio that might work for you. Also try ALL electronics in Los Angeles on Vermont Street, they have a web page but you will have to do a search.
Good Luck

Bruce & Debora Gordon wrote
>The FCC Inspector does NOT have Police Powers, and needs a Federal
>Marshal,...to provide Police Powers to conduct entry and sezure actions.

It's always wise to have a uniform present to avoid confusion when serving a warrant or making a scheduled arrest. Local cops here are required to do so, even when plainclothes cops are serving the warrant. "Police powers" are not always necessary in entering a building when serving a warrant. In Arizona (and most states) private citizens can and do enter buildings to serve warrants. They're commonly called "bounty hunters". (Also, private citizens (here) can arrest for most felonies and some misdemeanors in progress.)

>If he is refused entry, he can have the License Revoked, and Fine
>or Forfeture Imposed, but these are all after the fact penalties,

Which is why I wouldn't suggest that a ham refuse entry to the FCC, unless of course he's going to lose all that anyway by letting them in...

>[if] that there is Probable Cause that a
>Violation is currently happening or has happened in the very recent
>past, then the Enforcemnt Officer does the entry and it is by His
>authority that any search and or sezure takes place,

Entering a building to stop a felony in progress would be an exception to requiring a warrant. However it is usually used where injury to people or destruction of property is in progress. I think it's pretty unlikely that the average ham or CB'er will have his door kicked down these days, especially in light of the current toothless FCC letter writing campaign...

As to the average ham (who is not holding a hot mike) and finds the FCC at his door, absent a warrant, he *can* refuse entry. If the inspector forces his way in, I would advise him not to resist. Any evidence gained in an illegal search will likely be supressed.

>Bruce (semiretired powderman & exFCC Field Inspector for Southeastern
>Alaska)

The "warrant-free searches" (wink wink) for real cops were better in the old days too...

If you like sideband, the Uniden PC122XL is a good one at around $100.
Ive got the Grant XL, Which is an excellent radio, but it costs around
$130 at the cheapest.

Buy it from your LOCAL CB store (Alan Jackson's Little Man). Get a Pro-510
uniden around $50 & a $30 3' magnet mount. Then you'll have the best under
$100, unless you can get a PC-66 or 68 & antenna for $100.
Dave (20 years a "Little Man" CB shop).

Guess again. I have personally argued the jurisdiction point with two city attorneys and the the District Attorney when a local judge signed a search warrant on a Ham and CB operator, which fell on deaf ears. All they said was "Hey, the judge signed it, it is legal." And "The F.C.C. has abdicated authority to the local officials." Local police in Green Bay WI, without the F.C.C. or Federal Marshall executed the warrant. All because a local alderman with help from a willing Detective Police Sergant wanted that person out of the neighborhood.
The police confiscated ham gear, CB radios, and even a personal stereo. None were returned. It wasn't until a few choice words (Lawsuit agains the City with apprpriate media coverage) were said to the then Mayor at lunch with his cronies did the harassment stop.

I just ran some shielded cable from the battery to the radio to get rid of any hint of noise that may be getting into my radio. I used Belden #14/2 shielded with a drain wire in the shield. My question is this. I ran from the battery (using a 15A inline fuse (radio is fused again with 4A with factory wiring harness) right at the battery and grounded the shield bleed wire at the battery ground jumper as well as the - wire. I know as an electrician to only ground the shield at one point to avoid creating a ground loop (antenna.) But this is the only place the radio is grounded. Did I do this right? The only other way would be to ground the shield at the radio but then I would have to ground the radio there too? and only be using the cable to transmit the + current? The only experience I have in using shielded cable is in smart fire alarm systems and the cable drain is always grounded at the power supply. I'm only getting minimal engine noise but the main CPU for the car is right next to the battery and I don't think that zero engine noise is possible. The noise blocker on the radio totally eliminates it now under all conditions. Should I be happy with this or should I terminate the cable in a different way?

Thank you Bill for the post. It goes to show that there are a few good people out there after all.
You see the sport in what we are doing even though you don't agree. But that is fine.
There have been some real nasty e-mails going around from some Ham dude that is out to get CB'ers and I agree with you on frequency is frequency. It does not matter where you transmit. We are all equal and we need to just get along or take our toys and go play in our own sandboxes.

It is rare that you will see anybody competing with an amp that has a bias other than grounded. even the X-force. not ragging on them in any way, its just that the majority of the people who run these "custom" built type amps by different builders usually drive the piss out of them and they are basically biased class c.

Dat 10 ohm smoke,
Sure make you choke,

I've got a Uniden 76XLW and have been quite happy with it for a several
years now. Its a tough radio and exceptionally dependable. It works in
winter subfreezing weather and in a sweltering mid-summer vehicle. Audio
is excellent. I've coupled mind with an Astatic Road-Devil Mic. The
stock mics are alright, but eventually you'll want to ditch it and get a
powered one. People can understand you much better with one.

I wouldn't bother with a lower end radio like the 510xl. The 510 is a
fine radio for one in its price range. I had one for a few months, but you
get what you pay for. I didn't like the squelch on it. The slightest skip
required I boost the squelch nearly 60%. It would also be annoying to
have fringe discussions cut in and out.

The 76 has a more "feathered" squelch.. the squelch fades in and out
softly, making high sunspot activity days more comfortable to the ears. I
think just overall it has a better receive circuitry, at least that's been
my observation from owning both radios.

Its also *extremely* convenient to have the built in SWR meter! The 510
doesn't have one. A SWR meter is a necessary piece of equipment, might
as well have one in the radio.

Having access to the NOAA broadcasts has been pretty handy and I've come
to decide they're indispensable for my personal uses. Get one with
weather receive if you do 4x4 in the back country.

Having SSB would be useful for the power boost, and the PC122XL is in your
price range, but I prefer having Weather channels, and there aren't many
11-meter radios with Weather receive AND SSB. (With the exception of the
new Texas Ranger CBs and the Midland 79-290.. a radio I'm considering
buying).

Of course, anyone here will tell you, your radio is only as good as the
antenna you match it to. A good match is critical. Get a good antenna.
No Radio Shack crap. What is the best mobile antenna is argued endlessly
and I'm not touching that with an 11-meter pole!

Don't do what I did and "buy small" with limited equipment because you limit yourself to a budget. You'll find yourself spending more and more money as you upgrade (and believe me, you *will* want to...) and over time, you'll spend alot more money than you wanted to. Just get an excellent rig *now* and bite the cost. It will pay for itself in the long run.

I can recommend Bill's Two-Way for online shopping. The guy is a professional and upfront about shipping and costs. He's got the best prices on equipment I've found online. He's also got a well organized website that has information on many items he sells.

http://www.bills2way.com

Just an advice.. if you can, get your antenna locally. Shipping costs for antenna whips might be a real shocker. :)

Every body has their choice of what they wish to do, Some people like to talk side band and the ones who dont generally stay away from the so called sideband channels, And technically what some of them do I believe is illegal, is it not illegal to talk to a station more than a 150 miles away on a CB radio? the sidebanders do it all the time, kinda like the guys on channel 6, in other words their is a place where each person generally steers clear of because that particular place does not pertain to them, kinda like this news group and you.

> where I have misunderstood the question.Why have a insulator at all?
> "Bob" <Bob@bob.com> wrote in message

Time for a crude representation of the antenna:

```
|
| <- Antenna Shaft (~1/2 wavelength)
|
|
|
|
|
|
|
|
|
C
C_____________________________ To Center pin on coax
C
C_________________________ To Shield on coax.
```

The "C" 's represent an inductor (Coiled wire). The center taps onto
to inductor somewhere in the middle. The bottom of the inductor
goes to the shield. As you can see, your Ohm meter's DC current
will just loop back through the inductor looking like a short circuit,
seeing very little resistance. However, feed an RF signal to this
setup, and RF doesn't just jump acrossed the inductor
ignoring the rest of the antenna. Anyway, I made this up, but it
sounds cool.

Bob.

Hello Matthew:

The Federal Communications Commission (FCC) is a US governmental body that administrates any and all uses of the airwaves. Unlike some countries in Europe which do not limit the amount of power a CB radio can transmit, the FCC limits the output of an amplitude modulated CB signal to 4 watts. This law was written more than 40 years ago when television interference was a problem here in the US because of the spectrum used for commercial television broadcasts. The advent of cable and digital TV has essentially eliminated this problem.

In addition, legal political lobbying groups such as the ARRL, which are comprised of mostly licensed Amateur radio operators have consistently used their "political action" funds to fuel politicians into rigorously enforcing these bygone laws, which our society has much larger problems to deal with, and putting any funds into enforcement for such nonsense would be better served towards quelling some of our larger societal problems. Most of our legislators have recognized this fact however every once in a while the smell of political action money unearths a few of these same lawmakers to propose a bill that would increase the penalties towards an illegal CB operator.

What you'll find on this newsgroup, are these same Ham radio operators who think that society is doing just fine and we should use our precious law enforcement personnel to track, fine or arrest those with their toy radios, instead of policing for drugs, prostitution, extortion, larceny, murder and the like.

What they don't realize, and they never have, is that there is only so much money to fuel the policing of anything and they'd have our limited funds being used to enforce nonsensical 40 year old, severely out-dated laws.

I do have 'some' engine noise but that goes away when I switch to NB or NB + ANL switch. My problem is distant noise that is non-voice (i.e. squeals, buzzes, static or garbled voice) seems to break in OVER the squelch setting. And setting the squelch even higher to avoid this precludes any communication with close stations. I'm not talking every few minutes but on CH19 where everyone talks around here it happens every 5 seconds. My Fianc&#65533; refuses to ride in the car with me with the radio on anymore because it is so annoying. I cant seem to squelch out the crap without losing everyone more than 1/4 mile away from me. Maybe it's someone in my area with some huge linear amp??? There is this guy on channel 6 that when he transmits I can hear him on channels 1 through 12 but only clearly on channel 6. Nobody can use the first 12 channels when this guy is talking to himself. Maybe this is the kind of trouble I'm running into. The problem comes and goes. It is not there all the time. Usualy it's when my fianc&#65533; is in the car so she can have a reason to bitch about the radio. I never seem to get the 'quiet, clear channel' that you refer to on any channel.

Hello Matthew:

At present, the conversion from pounds to dollars is 1.670 dollars per pound. This would make your Yaesu radio worth; 400 (pounds) x 1.670 which equals $668 US dollars, which is a very good price for that radio in used condition. SELL, SELL, SELL

Good post Bill. Try asking a technical question on the Ham newsgroups and see how many responses you'll get (most of the time the answer is zero). On the CB newsgroup you'll get several answers within minutes, and ironically most of them are answered by Hams.

This illustrates me that they love being the teacher to those whom they feel they're superior to, and at the same time they don't like to share information amongst themselves because of some sort of embarrassment they may get from their own peers if they are proven wrong.

a lot of times i have noticed that people who have these so-called
emergencies and get mad when something happens to impede their
communications , really have nothing but a trivial matter to pursue, and
then they get mad because they couldn't talk, another example of someone
overestimating their importance. listen pal , if you want to butt into
everything that goes on out there in this world , then go be a cop or a
ambalance driver or emt. if you want to be a do gooder and use your radio to
accomplish your goals, do not be mad when someone else disagrees with your
ideas. why should the band , standby while you pretend you are important
reporting a wreck or something. hell you can use a double l for that.
remember it is not important what you are doing in the presence of the great
one.............,icm out.......

Jeffrey Herman wrote
>In the cases publicized here in Hawaii, a US deputy marshal accompanies
>the FCC agent, and it's the marshal who forces entry.

The Marshall likely had a warrant. It's a *constitutional protection*, even from the federal cops. There are some legal exceptions to a warrant. For example if the officer can see a body inside the house they can force entry to give aid. (However once they determine it is a crime scene, they must back out, secure the scene, and get a warrant.) Another exception is fresh pursuit. The bad guy, running (with the cops close behind), can't just run into his house and say kings-x. But the amateur radio station inspection rule is certainly not an exception. If you refuse entry, unpleasant things may later happen to you in court, but absent a warrant, you *can* refuse entry to your home...

<<It takes a good parcel of land and a tower or two get signals out there that would even be considered useable. Sure you can hang wires off trees but not everyone has trees to hang wires off of. >>

I have a tiny lot with barely enough room to string a 40M inverted vee at 29 feet. Pretty wimpy when compared to a tribander at 90 feet. But I'm able to work the world in any mode with 100 watts. And that's not uncommon. In fact, I'd say it was typical.

<<You also need neighbors that are about 100-200 feet away to eliminate or minimalize interference. Even with the cleanest station, you WILL interfere with some of their crap, that's inevitable with the cheap electronic junk thats around in the consumer market. There is simply no escaping that. I can't think of one ham that was able to get anything more than QRP out without running into some type of interference problem. >>

Neighbors are pretty close in to me. I do100 watts on 40 thru 10 with no complaints. And I've asked around.

<<<Yeah, and on 10-20 meters you basically have a mediocre signal. 40 and 80 work better, but the lightning crashes will kill 100watt stations with aplomb. >>>

A 100 watt signal on HF is anything but mediocre due to propagation effects that make 1000 watts not much stronger (on the receiving end) than 100 watts.

<<Oh, and btw... G5RV = "antenna which works equally poorly on all bands" good for a pinch but it's nothing to brag about.>>

The object is to communicate, not brag, or "be the loudest on the band". In that light, the G5RV is a useful compromise antenna for many situations.

>the bill of rights.

When you key that CB transmitter or sign that
ham license you agree to abide by the rules that govern
its use. If you use a CB you agree to abide by FCC Part
95 as a condition of its use, if you are a licensed ham
you agree to abide by FCC Part 97 as a condition of its
use. Part of both agreements are that you AGREE to allow
an FCC inspector to inspect your station or its records at
any time. If you refuse then you violate the agreement
which opens you up to fines and/or loss of the equipment or
license.

95.426 (CB Rule 26)
Do I have to make my CB station
available for inspection?
(a) If an authorized FCC representative
requests to inspect your CB station, you
must make your CB station and records
available for inspection.
(b) A CB station includes all of the
radio equipment you use.

&#65533; 97.103 Station licensee responsibilities.
(c) The station licensee must make
the station and the station records
available for inspection upon request
by an FCC representative. When
deemed necessary by an EIC to assure
compliance with the FCC Rules, the
station licensee must maintain a
record of station operations containing
such items of information as the EIC
may require in accord with &#65533; 0.314(x) of
the FCC Rules.

It doesn't "negate" the Bill of Rights in any way.
You sign away your "liberties" and "rights" every day.
When you sign your driver's license you agree to abide

by the highway laws. You can't just drive as fast as
you want as a "freedom of expression." You have the
right to keep and bear arms but you can't carry a weapon
into a place where alchohol is sold. If you walk down a
city street brandishing a gun you will probably be arrested.
You can't just whip out the Bill of Rights to justify
your own irresponsibilities.

Kevin, WB5RUE
Timing has a lot to do with the outcome of a rain dance.

I just aquired a brand new AS Star duster never used yet and I just opened the box for the first time and noticed that it has a piece that is missing , I need the plastic that holds the radial on the ground plane section , this mounts on a strut coming out from the mastpipe . I had one and gave all my parts to a gentalmen on trade.

OMT
<<<<<<<<<>>>>>>>>
You should be able to make one out of some type of plastic very easily. It will be very hard to find a new one, though. Take a piece of PVC pipe and drill proper size holes at proper angles, a little filing and you will be there.

Hey all. I went on a camping trip with my buddies last year, and I was the only one without a CB. It's a real pain in the ass not knowing where the other guys are on a 4x4 trip!

Anyway, I really need a CB for these little expeditions, and I hoped you all could point me in the right direction. Just something that won't break my bank, target price of around $100. And smaller in size would help, but is not a huge concern. I notice that many seem to be fans of Uniden, but what are some other good considerations?

Also, if these can be purchased online I would appreciate the URL.

Thanx,
-NOJ-

The FCC Inspector does NOT have Police Powers, and needs a Federal Marshal,
(on Land) or a USCG Officer (aboard ship) to provide Police Powers to conduct entry and sezure actions. If he is refused entry, he can have the License Revoked, and Fine or Forfeture Imposed, but these are all after the fact penalties, and must be approved by HQ in DC before imposition. When there is
a liklyhood of refusal and the case demands imeediate action, the Enforcement
Officer is dispatched with the Inspector, and when the Inspector certifies to the Enforcment Office that there is Probable Cause that a Violation is currently happening or has happened in the very recent past, then the Enforcemnt Officer does the entry and it is by His authority that any search and or sezure takes place, with the Inspector acting as a technical advisor to the Enforcement Officer. Been there, done that!

2097. Re: CB Moron caused DEATH !

Newsgroup: rec.radio.cb
Date: 1999-10-19 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7uid29anc1@oak.prod.itd.earthlink.net>
Source record: 6572

Well, you sound just like the guy in Dallas....

But for your information, not that it matters to you, the situation
where the people were quick-keying was in Littleton, MASS,
and the situation was a car with smoke under the hood. Neither
I nor the other car had an extinguisher, and by the time the fire
trucks got there, the car was fully engulfed. A total loss. Would
it mattered if I had gotten a call through immediately? Probably
not to the car, but possibly for the salvaging of the contents.

The situation in Dallas was on I-30. A beautiful mint 65 Mustang
slammed on it's breaks when the car in front of him chickened
out from merging and stopped dead on an onramp. The Mustang
stopped dead as well, then a delivery truck slammed into the
Mustang, totaling the Ford. The front of the truck was into the back
seat of the Mustang, and the front of the mustang was destroyed
by the car in front of it. Gas was leaking onto the roadway, and
cars were coming up the ramp and sliding in the gas. There
never was a fire, but should I have waited till there was a spark?

Or should I have just driven away in both those cases?

I know, somebody elses problem.

Yeah, I know about the people you refer to, the people that
'their information' is more important than procedure and policy.
The 'wanabees' who so desperately want to belong. The
people who persist in breaking into weather nets when the
control is asking for something specific like trying to plot a
front and asking for heavy rains or winds over 50 mph, and they
just HAVE to get in there and say 'it's calm here'. Those kind
of people...

But then, you're the other end.

People with morals like you disgust me. I have no time for you.

The only "myths" I see are in the
last post in this thread.

Antennas with multiple loading
coils do two things:

1. Lessen the overall physical
length of the antenna required
for resonance at the given frequency.

2. Lessen the overall amount
of cash left in your pocket or
wallet in exchange for some "hi tech"
song and dance.

Jack

As I mentioned the company will not let us use mag mounts (which I used with a Wilson 2000 with great performance). Now I have tried the Wilson no ground and I had a perfect match, but I could not get out..Anything over say a mile and my co workers could not hear me... I also could not hear worth crap either.. So I switched to a solarcon no ground and now I can here great like in the country far signals, but I still cannot get out well... I used to get out on a good day four to five miles now it is down to about a 1/2 mile to a mile depending on the noise..I have noticed that firestick has a no ground.. Do they work better ? And what about Francis fiberglass antennas ? Do they need a ground ? Now Allot of my friends have similar antennas as mentioned above and they are getting out pretty good to great... That is why I am considering getting another radio as well...A CB shop checked mine and said everything checks out, but this is getting frustrating.

Thanks,
Mike

I am a Peace Officer. Paramedic, and Firefighter. I have a lot of people who call on the CB, as well as Ham radio to report "their" emergencies. Some are legitimate, and some are not. It is for the people who respond to the emergencies to decide, and not the folks who refuse to allow them to be reported. As for the Mustang in Dallas, the mid to late 60 Mustangs were notorius for erupting in flames when struck from the rear, and fortunately in the case quoted, it was a gas leak insted. Just a catastrophe waiting for the right time to go into flames. I appreciate all of the calls, even though I dread hearing them sometimes. I cover a rather rural area here in Texas, and sometimes radio is the only way to get a message through. We do not have good cell coverage (THANKS! to the big cell companies.) Just remember, the fool breaking in with a trivial report may be saving a friend or family member.

"The polarization of a radiated wave
is in the direction of the electrostatic
field of the antenna. A horizontal
antenna transmits a horizontally polarized
radio wave. A vertical antenna radiates
a vertically polarized wave". This should
be self explanatory to all except those
who have great trouble understanding what
they read.

Excerpt (in quotes) from:

Electronic Communications
Fourth Edition
Robert L. Shrader

Your "misinformation" regarding multiple
loading coils in antennas is just so much
dribble.

You will still get the stinging shocks when you touch the radio. Grounding it will not stop that. You will get static discharge from your carpet. the shock is the static going to ground through your radio. IF the radio is properly grounded you don't have to worry about hurting the electronics because the charge will travel along the metal skin of the radio and then to ground. Yes this can hurt too depending on the conductivity of your skin and your own personal pain tolerance. (I'm an electrician and am no stranger to being shocked from time to time but electrostatic shocks really bother the hell out of me. During certain times of the year just getting out of my car I get hammered the moment I go to close my car door. It hurts me MORE than getting 120V AC from hand to hand.) I would recommend conditioning your carpet with an anti-static fabric softener the next time you shampoo your rugs or look into a humidifier when the problem gets bad if you can't take the pain. I have wood heat and in the winter I always put water in the iron kettle on the stove or my house becomes SHOCK CITY.

Vif, that's just normal CB sounds. The band is very noisy due to the current skip cycle being high. Many signals from other parts of the country or even the world are combining to give you the buzzing and squealing. Rest assured though, it will get worse. The cycle has not yet peaked...the channel 6 station, is a different matter though. He may be very close to you, or he may be running a linear amp, he may have his mod limiter clipped, or any combination of these things. Lou Franklin offers a product called the "Channel Guard" which MAY help with the ch 6 station, but it won't do a thing about the skip. Best of luck and 73.

They are not exactly the same as the heat sink is larger and the bias that is used is not the same either. I will say that both makers are the only ones that we have seen that doesn't have any standing wave. The no-names we have seen, we were not impressed with the design, layout, metal used for cabinet, or the performance. They looked and performed poorly. At least these two makers have quality on their minds.

>
>

Excellent points made, Mr. Jones. Please allow me to elaborate. Since this post is going to both RRAP and CB NGs, I thought I would take the opportunity to do some civilian RADAR training in the hope that we could all understand how RADAR and the decision process works ...

In your post you combined two areas that really need to be separate (not your fault, I'm absolutely astonished that you have such excellent knowledge of the subject)

Target Vehicle Identification (RADAR "decision" process:)

Reflective capability
Position
Speed

These are what the RADAR "looks" for in order of importance. A truck will have a much higher reflective capability than a car or a motorcycle. This is why:

K-band RADAR, which is the most widely used type, has a beam width of about 70 feet in diameter at 250 feet from the RADAR, 280 feet in diameter at 500 feet from the RADAR,and about 1120 feet in diameter at 1000 feet away from the RADAR.

From this, we can easily see why a truck would fill *most* of that cone, even as far away as a 1000 feet. Naturally, the RADAR is going to pick up on the largest piece of metal in the cone. If two targets are within the cone, and they are about the same size, then the closest one will usually

fill most of the RADAR cone, and once again become the primary target of the RADAR. Finally, If both vehicles are about the same size, and in about the same position, the RADAR will pick up on the faster speed and make that vehicle the primary target.

Now change this to a truck and a motorcycle, and you can see how this would be even more exagerated. A poorly trained police officer could easily think the motorcycle was the offender, when in fact, the truck was speeding.

That's why we must also incorporate a "Tracking History" into every stop:

Visual estimation of target speed
Audio tracking
Target speed display
Patrol speed verification (moving RADAR)

The first thing a police officer should do when determining if a particular vehicle is speeding is to visually estimate the speed. This can be accomplished a number of ways, but movement in relation to traffic is one of the easiest. Seasoned officers can "guess" speeds within +- 2 mph.

Each RADAR unit has an audio feature which has pitched sound in response to speed. The higher the speed the higher the pitch. This is a continuous signal, and is required to be active. It's intersting to listen to a RADAR as traffic apporaches and "slows" at the sight of the patrol car. You can "hear" the deceleration. Certain speeds have distinct pitches, and seasoned officers can tell you within just a few mph, what the speed is based on that sound.

Finally, the officer looks down, or over and verifies the speed displayed to his earlier guess. These two speeds should be very close.

In the case of moving RADAR, the officer must also verify the speed of the patrol vehicle. This speed should be within 1 mph plus or minus.

When we combine effective use of target identification and add a solid tracking history, the chances of the officer making an error almost disappears.

I applaud you for ponting out the fact that it is the Training and not the RADAR that makes the difference.

Regards,

Arnie -

The squelch circuit on all my PC-122 based radios (122/244/640e/810e)
is very choppy. If the squelch is too high, you will hear the first
blip of whoever just keyed up. I turn down the rf gain about halfway
(or more) and then the squelch is somewhat useful in noisy conditions.

What!?! Don't go to "WallyWorld," all they have is Maxon crap...Not very dependable equipment in my opinion.

Uniden is a very good brand, and currently, I can't recommend anything else. Some would say Cobra, but in my opinion, their new radios are not very spectacular and from what I have heard, prone to problems.

Others would say Midland. I don't have any experience with Midland's newer radios, so I can't say one way or another. All I know is that the mikes in their older models were very prone to failure.

As far as purchasing online, that can certainly be done, and probably for a lot less money than something you could purchase locally. For a vast selection of links to online sites that sell radio equipment. please visit my CB Page. You will find the link below...

Wait a minute what a bunch of bullshit.......

A coil does two things

1. allow you to run shorter antenna for the frequency in which you
wish to operate.

2. Burn up rf energy that you could be putting in the
atmosphere.(inefficient pieces of shit)

coils are pretty much useless othere than that so put thode girlieman
antennas away and put up a resonant one on the frequency... Don't be
stooooooopid........

Unidens are very reliable, I've had a pc76xl for several years, never a
single problem. A coworker has a pro510xl and it sounds good for the $30
he paid for it. We matched up his antenna really well and his got out
better than some of the guys I work with that have linears pushing through
their high SWR setups.

Check these sites out, I have purchased from both. Also you can buy from
Uniden I think too, http://www.uniden.com.

cb is great
amatures are great
but one is a dying breed of 2 meter stalls and cw blocks

i listen to the "RAGCHEWING" on the amature bands all
the time and the only difference between it and cb is the
distance you can cover.

there are intelligent and articulate coversations
there are no-minded uninformed ignoramuses
you can't have it all. you can only have some.

what i see here is a newsgroup that is its
own little society of classes.

you all have better things to be doing with
your time. SO GROW UP!!! stop speading
your tail feathers and enjoy what you are
capable of doing. get on the radio and
broadcast. give me something to listen
to.

I am producer for A&E and I am looking for someone with knowldege and a collection the CB radio during the seventies, the so called "trucker Era." If know someone or are someone who can help, then either call me at 818 755 4800 ext.124 or E-mail at rtatigian@wellergrossman.
This CB enthusaist must be in the southern California area, prefferably in the San Fernando Valley. The deadline for this show has come and gone and I need to get ahold of someone before the end of this week 10/22/99, or sooner. The name of the show is A&E Top Ten and the CB during the seventies is one of the Top ten Fads, it will be airing Sunday Nov. 21 at 4pm pacific 7pm eastern. Someone please pull me from the fire, and help me add more to our segment.

Thank You,

Robert Tatigian

So the guy was trying to pull a fast one, I have the papers here one the 3500 that's here and it has the very large heat sink on the back I say around 6" wide and 3 1/2 high and the cw and variable power board was installed by Clear channel. But that aside why would you put a low price on a 100 watt one and on the group here I have seen 2510 2600 2950 and 148gtl all going for more the only reason that I ask is I found a old qst book and they have the AR-3500 100 watts in it going at the time for $700.00 us and have not seen any 2510 or 2950 go for more the $350.00 so I just wanted to ask you why OK..

How much heatsink is in the xforce x400 and how many inches in the davemades m400 ? Both cabinets are about the same size more importantly how many fins are they each using , don't be misled by just size the thickness of the plate and the amount of fins plays an important role. Far as i know davemade comp amps are class C and anything other than that can be custom made such as class ab-1, b, c, or even negative bias from what I was told. No noanmes are based on a totaly different design, The reason x force doesnt have any standing wavs is because the davemades don't, they use the same tuning , transformers etc, adding bias is not a major design change by any means. I have owned both and looked them over closely and ran them daily I didnt see a major differance in either one.

qualify for a ham ticket.

>on this group? hahahahahahahahaha go play with your HT!

Which one? I have three handheld transceivers. I also have two base
rigs, and one mobile rig...not to mention two computers, six scanners,
two HF receivers, a DSP, a preselector, two active antennas, three
vertical antennas, a longwire antenna, and a receive preamp. I also
have access to the club station which has three more computers, four
HF rigs, a VHF rig, a UHF rig, and a 2m repeater station, and 14
antennas on two 100 foot towers.

Go play with your echo mic, loser.

The prices that you found are "manufacturers suggested retail prices". The actual street price for the 100 watt model was $400 when it was brand-new in the box. Even 2510's could be bought as low as $179 at one point. I think that these days a used AR-3500 100 watter in excellent condition is probably able to sell at around $250. But I recently bought a very nice one for $200. Rick

I can go along with this to a certain degree.

> This illustrates me that they love being the teacher to those whom they feel
> they're superior to, and at the same time they don't like to share

This I can't agree with at all.

The natural order of things tells us that the person asking
the question is likely to be subordinant to the person
answering the question as far as the specific subject is
concerned--that's perfectly natural and shouldn't be seen
as a negative.

As to the embarassment of being proven wrong by peers;
learning from your peers is the nature of AMATEUR radio and
is never seen as embarassing as it's the natural order of
amateur radio. In other words, it's the duty of the more
experienced to teach the less experienced. Again, it's
simply the natural order of things.

John, it might be a husband/wife team who use the same account. That -has- been known to happen on here, however goofy it may seem.

Brian

I don't know if you need that particular model, but I just ordered a kit from
Jameco for $9.95. Tunable 100 to 108 Mhz, 9 to 12V. They also have a stereo
kit for $29.95 which is tunable 76 to 108 Mhz, 9V. Both are about 2" x 3".

Mark Russo wrote in message <380A76B3.108DACAB@hoflink.com>...
Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

Oh Rickeypoo.... Please see below...

Hello Shadow
Well Yes I did mean to get your friends stirred up,

>>>So, this would classify you as the typical ham that believes he has the right to come down on another class of people just because he has a license, right?

>>>>Racism at it's finest!

and yes in one or two I did come down a bit to hard but the fact is I'm only one of several who are doing this

>>>And you all can be classified the same way. Of course the CBers think the same about you!

the FCC is coming to 10 meters to get the illegal ops

>>>And for the "flip side of the coin", the FCC has and still is taking away equipment, issuing NALs, taking people to court and revoking licenses on the 75 meter and other bands...

>>>Before you toss stones, you better make sure that your houses are not made of glass!

>>>Ever been to the amps reflector? Where the teach other amateur ops how to build amplifiers using tetrodes with handles?

and to the internet to stop the sales of linear amps for use on 10/11 meters.

>>>>You have proof of this? I sure do hope so, otherwise, you are just spewing gibberish.

>>>Also, I am happy to see that you finally used a punctuation mark... Of course, this was about 10 sentences into the paragraph.....

>>>Better late than never, eh?

it is illegal to sell amps that work on 10 meter much less 11 meters

>>>>Umm.... That is not totally true. You can sell ANY amplifier as long as you are selling it in it's original state. This means that if you sell an old Drake, Henry, Alpha, or any other amplifier that was originally capable of TX on 10/11, you are fine.

>>>You cannot sell a NEW amplifier, made after the cut-off date, that has 10 meters in it from the factory... If your amplifier is BRAND NEW, FACTORY

SEALED, and includes 10 meters (as did the SB-220 kits that one occasionally finds unopened), you can legally sell those from a storefront.

>>>Also, if the device is for "EXPORT ONLY", clearly marked, and sold under the understanding that it will ONLY be used outside of the US or it's possesions and territories, you can sell anything you want. Henry markets an 8Kw amplifier that is general coverage, and will sell it to anyone that signs a waiver that states they will not use it in the US unless kept under the 1500 watt rule for amateur ops.

>>>Guess that kind of blows your story out of the water, huh? Don't believe me, ask Texas Star... Their new CW amplifiers have passed FCC inspection!

only after you prove that you have privileges on that band can you modify the amp (that is for 10 meters)

>>>Not totally true. Only after you have proven to the MANUFACTURER can they give you the instructions.

>>>Anyone can have a modified amplifier that covers 10 meters.... Using it withot the proper authority (a ticket??) is what is illegal.

Shadow I know I sound like a mean old SOB and really I'm not

>>>No, you sound like someone with a vendetta and hell bent on cleaning up the 11 meter band. I agree that something needs to be done, but not the way you are doing it.

>>>Betcha hate it when people talk shit about 2 meters and the other CB typical ham bands...

>>>And to think that you are only a tech plus.... Shows that you are not that far away from being a CBer yourself!

I don't hate CBers I was one once even had a license for 11 meters back in the 70's, and as long as they abide by the rules we have no problems

>>>WE..... WE.... WE.... What, do you have a mouse in your pocket?

>>>As long as we don't have to listen to the hams that think they are the RF police of the world, we CBers don't have a problem with them, either!.... But your type doesn't leave us alone, either!

heck if you want to run 10 killowatts on 11 meter fine!

>>>>O.K., so your other statement about 5 watts being the legal power (which is complete BS, it is 4 watts) we should just throw out the window, although in your last statement that Shadow got you chastised anyone that ran more than the legal 4 watt carrier!

>>>C'mon... You can't change the laws, nor can you modify them to fit your needs / arguments. Don't be wishy-washy.... Come up with one complete story and stick to it!

But it doesn't stop there the 11 meter band is so full of trash that ya'll are coming up to 10 meters and trying to trash it out.

>>>No, I don't. As a matter of fact, the only radio that I have that is capable of 10 meter operation is my TS-440SAT.

>>>>I suggest you stop calling all CBers like they are one in the same, or I will believe that it is OK and start calling you the same names that I call the assholes that propogate hate and racism and other problems on 75 meters, or the "KerChunk" operators that I find on 2 meters here in Houston!

>>>Don't try to lump an entire service as one. Not every talk show host is Howie Stern (another idiot)... Not all CBers are "running to 10 meters to trash it"..

>>>Hell, upgrade to a General and get off of 10 if it bothers you so bad!

The only way to stop this is to make ALL cbers abide by the rules heck most need to read the rules

>>>>As well as you do! So far, I have caught a couple technical mistakes!

If you talk more than 155.3 miles you are in violation

>>>>Wrong... Attempting to talk more than 150 miles is against the rules. Not talking it, just attempting (unless it is in a MayDay situation. Then their are NO rules).

If you modify your radio your are in violation

>>>>Not totally true, either. You can modify the RX section all you want. You cannot modify the frequency determining circuit whatever. You can also modify the transmit section, as long as it doesn't do more than a 4 watt carrier, 100 percent modulated.

>>>Like I have been saying... I suggest you learn the law before spewing!

If you connect a linear amplifier to you rig your in violation

>>>Guess what?? The first right answer you gave! Although I have a catalog that markets amplifiers for LEGAL use of channel 23...

>>>>Can you guess what the purpose was? And yes, they where legally sold and used on channel 23..... So, that rule can (at least somewhat) be kissed away, too.

Any one of these can result in a fine of at least $2,000 to $5,000 fine not tell me how many of your friends can say that have not done at least one of the above?

>>>>And show me how many contest operators have not run in excess of 1500 watts PEP during CQWW? I mean, what do you really think the Alpha 2 hole (2X8877) amplifier is for? It is capable of 5 to 8 Kw output and sold to the amateur market!

As far as your get together I think you call them keydowns the company and friendship is fine just get rid amps.

>>>>Why should we listen to what you say? Are you THE AUTHORITY??

We have the same thing called shoot outs but it is vastly different it is a one station at a time talking to a distant station and the judges at the distant station award the prizes to the best signal it is done with better antennas not megawatts of power.

>>>Where is this done? Are you talking about field day? If so, it is a far cry from a CB Shootout!

>>>>I have participated in field day, and they pale (suck) in comparison!

No I don't know Mr. Hollingsworth personally I have talked to him on the radio and he does (or at least his staff) answers all his email.

>>>>Great... This makes you his CB Rambo?!

Fell free to email him about my actions his email is rholling@fcc.gov.

>>>>Thank you, but I can read www.fcc.org myself. I don't need you to tell me what is on their.. Obviously you do, though, as you where completely unaware of the rules and regulations that you spouted about CB radio!

I have already emailed him what I am and have done.

>>>>Great... And we care why? Does this give you the authority to act on his behalf? Should I expect a NAL to be coming via E-Mail from you?

If he tells me I wrong and to stop you will hear no more from me or my friends.

>>>I wish that was the case now!

73 (means best regards)

>>>>No shit. We used that on CB 30 years ago!

Negative, they are actually made as a new RCI, by RCI, on a new board, sorta a cross between the 148GTL and the 2950.

Also, they look a lot like the new Connex CX4400.

Is it a high drive? yes/no, either way 400Watts is about all it does, if you are using your base amp's 12Vdc converter at 12 volts, or 18, the finals in the amp can handle 20. 18 is safe for all the parts in the amp, you can get more than 500 at 18 volts.

This is what I got.

FM PLL TX 2-3 WATTS

R. Scott Communications LTD phone 250 642-2859

They also got some 20-100 WATT

Its in Canada, don't know if they still sell.

Got mine for about $300. Its fully assembled, got a jumper switch block to change freqs. Get about 1/2 mile on my setup.

xman Charlie

We will be happy to repair your amp for you, but as a do-it-yourself project, you need new torroid coils, don't wind them yourself(rfparts.com) also, your "pills" are almost deffinately fried, check them like you would a diode, or use a transistor checker, either way, get the matched quad from rfparts.com, and make sure to re-bias the new transistors when you install them, they won't be exactly the same as your previous configuration, unbiased means heat, and heat is of course bad.

And in the future, the Wilson has the metalic foil on the bottom of the antenna for a reason, that's your ground, ungrounded means high SWR, and hence..heat.

Hi,
I just got a 18 WX ST CB radio from cobra and a ATW-400 Dual band for CB and
Weather antenna.
The thing is when I am listening to the weather it is not clear.
I bought them both from cobra. Do any one have any coments?
CB for 34.99 and Antenna for 27.95. CB was factory reconditioned.

Do I really need to use SWR?

Help. Thanks.

Anthony.

i don't agree with the way the rules are written but be careful of the
"technicalities" of the term "rules".
when you get a ham license or key a cb, you automatically "agree" to an
inspection.

here in fla, when you sign an application for your drivers license, you automatically "agree" to a blood alcohol test if requested by the cop who stopped you.
if you refuse, you automatically loose your license for 6 months and, in most cases, your insurance company will treat you as though you were drunk anyway.
as a 15 year recovering alcoholic, i don't support driving under the influnce but these "agreements" by cooersion really scare me like deed restrictions and others.
if we arn't careful, anything you do will come with a hidden catch. you can breath, IF you "agree" to do whatever.
READ THE FINE PRINT BEFORE YOU SIGN!!! know where you stand!!!
i have no gripe with the fcc wanting to inspect my equipment but my domicile is NOT part of my equipment.
i will bring my equipment out to the front porch with an extention cord and he can inspect it all night long should he choose.
what do i have to hide, you might ask?
nothing to hide, privacy rights to protect.
just out of principle, the constitution is like muscles. if you don't use / protect 'em, you'll loose 'em. we've lost too many already.
jeff

> had a table radio and a TV, to interfere with. Now you have component
> stereos, amplified computer speakers, cordless phones, touch lamps,
> microprocessor controlled gadgets of all kinds, Fancy (but not shielded)
> TV's, that pick up MORE interference.

It always amazes me when a person comments on a particular time period with great insight, yet they wernt physically present at that given time. Well Dave, if you could actually remember the 50's, there were 4 television stations, 2 of which were the 2nd harmonic to the CB frequencies. This IS the reason why 4 watts was chosen as the maximum output of a CB.

>
> The ARRL has nothing to do with CB and has not wasted any of its time on
> CB related issues.

You are kidding right? Have you every picked up a copy of QST magazine and read its contents? One of the ARRL's membership bodies greatest interests it to publically distance themselves from CB radio. The only way they can do this is to proliferate enforcement of CB. Hell, we have Hams in my state that have already gone to our state police and volunteered to do this, just in case the Elthers Bill passes Congress. These guys thave nothing better to do with their time. There is nothing they would love more than to be a Radio Rambo with authority.

> If you knew anything about radio law, you would know
> that the ITU, has rules about HF spectrum, that has the capability of
> international communications.

Huh, the CB spectrum in Europe is different from that in the US. Such is true for Australia as well.

>But in
> the meantime, don't cry when the rest of us put you in jail, for
> breaking the rules, especially the rules that cause others less

Whos crying? Laws are words and words are interpretated differently by different people. This is the reason why we have a the Appellate and Supreme Courts, to dicern interpretations. If you knew anything about the constructs of our legal system, you'd understand this.

> Society is not doing just fine, as evidenced with the growing number of

> guilty of criminal and anti-social behavior, as long as you feel that
> you have the right to do what you want without regard for the rights of
> everyone else. *YOU* are the problem.

Sure Dave, and what have you personally done to better our society? At least I can judge for myself what is beureaucratic nonsense and what is actually a social ill. You guys would rather have our cops spending their time arresting CBers instead of Child Pornographers and Societies true low lifes. If we all listened and believed your rationale, we'd still be sipping tea every afternoon at 4 pm. Your insight is fantasyland stuff. If I have a choice of my kid playing around with his 500 watt amp or hanging on the corner getting into who knows what, guess which one Im going to choose? It seems that many people can identify a problem but they cant quantify a solution. In a perfect world no one breaks any laws.

> You are stating your *OPINION* here. It does not make it fact.

No kidding. You're just realizing this? Dont take this newsgroup stuff too seriously....I dont

>If the
> rules are found to be outdated, then they will be changed.

Sure, just like the cunnillingus and fellatio laws in my state that were written in 1789, which are still on the books. Theres one that should be enforced eh? For every 100 laws it is estimated that 7 are outdated. No-one has the time or the resources to change them because WE HAVE BIGGER PROBLEMS which must be addressed NOW.

>So far, not
> enough of the right people have been convinced. Since an ever-increasing
> number of CB (and ham) operators have demonstrated a decisive lack of
> discipline with regard to operating under the rules of their respective
> services, the FCC is not about to give them any more leeway.

>The FCC
> views the CB band as full of spoiled children, who need to be punished,
> not rewarded for their actions.

Oh, is that a fact. Im glad you are the official spokesman for the FCC. I hate to tell you this but the FCC doesnt give a rats ass about CB or CBers. The only time they get involved with them is when they HAVE to. The FCC doesnt even care about amateur radio anymore (they havent in 18 years as evidenced by the VE testing system and the abandonment of amateur enforcement until recently). There is much more immature behavior going on on the amateur bands by supposedly higher trained LICENSED INDIVIDUALS than than on the CB bands, all things considered equal.

>If CBers were disciplined and organized
> enough to support a lobby group like the ARRL, to fight for CB interests
> before the FCC, then possibly, things might change. As it is now, CBers
> are chaotic, anarchistic, and unorganized. There is no hope of

> presenting a united front.

Dave, Ive been playing around with CBs for close to 40 years now and let me tell you this; It has always been chaotic. It was chaotic in 1966 when everyone was using call signs and it is chaotic now. Nothing happened then, and nothing will happen now. Do you and your Ham friends actually believe that when the FCC can search out and fine the commercials interests tens of thousands of dollars for violations (which are also great political fodder), they are going to voluntarily waste there limited enforcement personnel on CBers? The only time the FCC will enforce CB and Amateur radio is when they absolutely have to.

PS: Dont put all of your marbles in the ARRL basket either because their mindset is that of about 1983. Why dont think they are caving in to the FCC's request to eliminate code? The FCC basically told them than unless amateur numbers increase, some bands will disappear. And in who's hands do you think those band will end up in? They'll end up where the money is.............commercial, because thats where the big fines and the big headlines are.

2176. Static problem follow-up

Newsgroup: rec.radio.cb

Well, I opted to ground the radio to the power supply, which does have a 3-prong cord. The only problem is, the only part of the power supply body that is conducting is the metal heat-sink at the back. Is it ok to jumper from this heat-sink to the radio chassis? or should I scrape off some paint on one of the panels or screws of the power supply and jumper off that?

>As I've said before: RF is RF.
>>

thank you for your neutral observations, really.
if more hams would "check their guns at the door", all of this bickering wouldn't be going on but they have to come here and play rf police and take it upon themselves to play judge and jury over this forum and try to squelch the freedom of speech and free flow of information for just talking about the subject and that's what angers me.
if they don't like what they read here, they should just ignore the post or leave the news group altogether.
yes, i know that they have a right to be here but that doesn't give them the right to spam others posts with unsolisited rules and condemnation.
if they want to "spread" the gospel according to the arrl / fcc , they should post it as a new message so everyone can ignore it equally.
have a good day.
jeff

this can be true for the truly inquisitive but most people who think that they
have a handle on things don't like to be told that they are wrong wether they
are or not even when they may discover later that they are.
this is called human pride and, in most cases, can not be "bread" out of a
person even after they get a ham licence or in any other situation.
when my uncle was alive, he was a general class and was so set in his thinking
that you couldn't convince him of his errors with the arrl handbook. he wasn't
wrong often but when he was, he wasn't.
i know not everyone is this way but it does occur all too often in all aspects
of life.
this is what makes us human. the sad part is this is what also leads to wars.
"i'm right, you're wrong - you're wrong, i'm right" syndrome.
$.02, keep the change. :)

Yep, Most, if not all, RADARs (handheld and fixed) use beams that are
within the microwave range of frequencies. Extended exposure to this energy
can cause the development of cancerous cells. Fortunately, all offficers
(that I'm aware of) are now taught this as part of their basic RADAR
certification.

You can do it either way. If you choose to make the connectorless splice, make sure it's physically strong enough to survive bending and such.

In youer case the best bet would be the I-Max. The main reason for this beacuseof the groundplane radials one the Maco make it dificult to pull up into a Pine tree without doing any damage to it. The other reason would be that putting up that much metal into a pine tree is asking for a lightning strike especially in your area.
Good luck on your final choice

You know nothing about WHEN I started "playing" with radio, so your comment is baseless. Your channel information is flawed as well. How can 2 seperate TV channels both be on the 2nd harmonic of CB? What you probably meant to say was that one was on the 2nd (ch 2) and the other was on the 3rd harmonic (ch5). Also, 4 watts was not the limit chosen back then. It was 5 watts INPUT (Which translated to about 3 watts output).

Regardless of what you may think, the FCC was very deliberate when they created the CB service. There is no need for high power when the intended usage is for short range communications. The mistake that the FCC made was underestimating the effects of skip propagation even at those low levels.

Where do you come up with such fantasies? To what end? What purpose would it serve the ARRL to spend their resources to "distance" themselves from Cbers? If anything, the ARRL is a business, and it recognizes the potential income by trying to recruit CBers into the ham

ranks (And their membership $$$). So it's in the ARRL's best interests
if they leave the door open to this potential source of income.

> Rambo with authority.

Does it bother you so much that there are law abiding people willing to
put forth a little time and energy to try to reign in a bunch of lawless
people? At least this frees up the "real" cops to go after harsher
criminals, that you use to justify breaking a "little" radio law.

>
> > If you knew anything about radio law, you would know

>
> Huh, the CB spectrum in Europe is different from that in the US. Such is
> true for Australia as well.

You don't understand the ITU at all, I can see. All of the counties that
have an HF spectrum CB service, have one thing in common, they are all
low power. None are meant to have international communications
capability. If a high power service were created, then, like hams, the
operators would have to be able to understand Morse Code. You can't get
around this international requirement, unless you run low power, which
is why the FCC created a 5 watt CB service on 27 Mhz.

But you do not have the right to selectively ignore rules that *YOU*
don't agree with, regardless of how you feel about them. You are
obligated to follow all rules, or pay the price if you are caught.

You might not feel that illegal CB operation is a big deal. Well another
person might feel that raping your wife is no big deal either. It's
funny that people want to ignore rules, until a lawbreaker suddenly
affects them. Then they want more rules.

> You guys would rather have our cops spending their time

So the real answer, until society wakes up from its "I'll do whatever I
want" slumber, is to hire more cops, so that we can bust every
lawbreaker.

> >If the rules are found to be outdated, then they will be changed.

> which must be addressed NOW.

Those "blue laws" are on the books because they are tough to enforce,
and seldom cited, and therefore, there isn't alot of incentive to go
through the trouble of removing them. Many of them were enacted at a
time when societal norms were much more strict then they are now. Now
that we've loosened up what is acceptable, and look what happens, we
have a generation of people that have no respect for authority, other
people, or preserving the common good.

> The only time they get involved with them is when they HAVE to.

Sure. They gave up because they couldn't keep up with the lawless
people. They go after the worst offenders only, as that is all the
manpower they can afford. That doesn't mean that they don't know what is
going on, or have a political position relating to CB.

> There is much more immature behavior going on
> on the amateur bands by supposedly higher trained LICENSED INDIVIDUALS than
> than on the CB bands, all things considered equal.

Now where is your data to support this statement? For your information,
it is a widely accpted fact that there are more CBers, squeezed into 11
meters, than there are Hams on all of their bands by sheer numbers. So
statistically alone, Cbers have more potential radio rejects than hams.

>
> >If CBers were disciplined and organized

When? I've been "playing with radio" for over 30 years, and CB used to
be very quiet, with orderly groups, and little interference, up until
the middle 70's. The only channel that was "chaotic", was the trucker's
channel.

> Nothing happened then,

> they are going to voluntarily waste there limited enforcement personnel on
> CBers? The only time the FCC will enforce CB and Amateur radio is when they
> absolutely have to.

You are basing your flawed logic on the assumption that commercial radio
stations are flagrently violating rules left and right. Such is surely
not the case. Commercial stations rely on their license to do business.
They are not about to risk losing it, by allowing rampant rule
violations to occur. Compared to the amount of violations on the
personal radio services, it is virtually nonexistant.

>

> headlines are.

Most of your statements are laced with paranoia and conspiracy. I
suppose you think Kennedy was assasinated by the Aliens that landed in
Roswell, and are currently living at Area 51.

It is a fact that commercial interests are salivating for more space to
run their businesses (God knows we need more pagers and cell phones).
Ham radio is in a decline, and I fully expect that some lesser used
bands will become realocated to commercial interests in the not so
distant future. I also predict that hams will gain other bands (That are
of little commercial value), as compensation. This has little to do with
"pressuring the ARRL". This is just simple justification.

As much as I would agree with you that s9+ skip levels are nothing more
than "noise", they are not the type of noise that a noise blanker can
get rid of. Skip are still signals. There are many time that I can not
hear any pulse noise, where a noise blanker was required. Other times,
it's a different story.

If you are prone to lots of strong local bleedover (Thankfully, I'm
not), the receiver with the best selectivity is usually best. Usually,
you'll get better results with the noise blanker off. A NB circuit
actually increases bleedover.

Message-ID: <7un3cpdnj1@fir.prod.itd.earthlink.net>
Source record: 6634

If you're not using the EXACT same meter and cable assembly, all
the way to the jack at the radio, and comparing the readings on
the EXACT SAME meter, you are NOT asking the correct question.

All an internal SWR meter is generally good for is just a relative
indication of SWR. They aren't that accurate to begin with, but
a minimum is a minimum. It could probably be adjusted, but why
bother? It's not a lab instrument! And you don't really care what it
is, right? All you care about is where the minimum is and a some
what ballpark representation of what's going on.

If you do care about it to the point of knowing, they go spend a couple
of hundred dollars on a good lab grade instrument.

Or buy something like a cheap RS meter for less that $30, and make
yourself some 'known' mismatches. Like a PL-259 with a 100 ohm
resistive load (right there 2:1 SWR) and 25 ohm (also 2:1).

Mike

>> they're identical to a discontinued Cobra model, but I'm not sure.
IT DEPENDS ON WHICH Texas Ranger CB's you are referring to. There are still
a lot of Discontinued TR-296's around which ARE exactly the last (side mic)
version of the Cobra 148GTL. All the current radios are based on the new
Ranger 696 board which is also in the Galaxy 959/949. Good Radios which peak
up better than a 148/Grant, will do "channels", and many have features such as
Rogr beep, variable power & talkback already built in.

I have a RCI2900, which I had one problem where as the radio would
"warble" when I first keyed up, meaning, the frequency would shift
down and up from the tuned frequency within the first second of
transmission - so on SSB, this resulted in a crappy sound.

The radio was sent back to Ranger, and I got it back, It still did
the same exact thing. The problem wasn't hard to duplicate - it did it
all the time, with any Mic, Antenna and power supply. Of course,
I thought it had to do with my power supply, but after I got
this regulated 35 Amp Astron - it was still doing it.

I think the newer radios are really good for the money though and
I wouldn't hesitate to use the RCI2950 - although I prefer the
analog signal meter on my RCI2900.

Alpha but have fun fixing it at home, and if you inherit any of their
earlier 8877 amps have fun watching them get destroyed by
parasitic oscillations.

Alphas are great looking and running amps when they do run, but it
takes an EE to fix the goddam things because of all the protection
circuitry involved. Then again, it is this same circuitry which
prevents someone from being an idiot with the amp.... :)

You might want to check your powersupply with an ohmmeter and see if it is already grounded to the - lead on the DC supply. If it is already grounded then you don't have a problem at all. check and see if - on the power supply is also chassis ground. It probably is.

>"Sandbagger"

Dave, comon... get real... "not insensitive to peoples needs?" For
chrissake, FRS was supposed to be done A LONG TIME AGO. Actually it
was in the form of GMRS but what happened was they made the stupid
licensing fees about a kabillion dollars and they attached all sorts
of gay restrictions to it. The FCC has not been successful in
bringing a radio service that everyone could use. And most of the
reason is that every "peoples" radio service is designed to be so weak

and pitiful that it "shouldnt" require enforcement. FRS is just a
copout for not opening up GMRS as a CB band(like it used to be),
that's all.

2219. Re: SSB mic question

Newsgroup: rec.radio.cb
Date: 1999-10-21 00:00:00 UTC
From: Bob <bob@bob.com>
Message-ID: <380F1833.FFA16095@bob.com>
Source record: 6645

Heil claims that their mic elements have a frequency response that is
tailored for communications. They have two serparate elements, one has
more mid-range presence that is for "getting" through and the
other one is for "rag chewing", it has a wider response and sounds
more natural. I sound like a damn advertisement - don't waste
your money on these things. I believe they are a dynamic type element.

I can't use any other Mic but the Astatic D-104 TU-G 9 Stand. If you are
going to use a crystal element, be sure to match that high impedance element

to your (probably) 600 Ohm mic input. If you don't, it spoils
the low end response. Also, for good clean SSB audio, I reccomend
bypassing the built in pre-amp (and just using a simple matching circuit,
it will drive your radio plenty when you match the impedances correctly)

Also, I put a radio shack electret element
in another D-104 head, and replaced the back "cover" with another
"screen", so the head of the D-104 has that "Screen" cover on both
sides. For me, this has been the best sounding mic I have used and
it looks damn cool.

Bob.

The FCC is a meaningless organization that abandoned the
CB band a long long time ago. You can forget about them unless
your causing a serious amount of interference. They don't
and won't care what you do, as long as your not interfering with
other (still regulated) radio services.

How many watts should *I* drive it with, you ask?

NONE. I don't want to be rounded up by the FCC and beaten about the face with pickles because I chose to use an illegal, awful, vicious, demonic linear amplifier.

I think linears are all infested by Satan and smart people like myself and RF Enforcer should hire a High CB Priestess to exorcise these demons and get rid of all of the sinners who use linears.

Source record: 6677

The radio should have nothing to do with the antenna swr. If you were analyzing the swr, you might not even have the radio attached. I presume you were looking at a meter on two separate radios. You should presume that neither meter is correct and opt for a third known-to-be-good meter. Let's review. The first radio gave you readings of 1.4:1 at the outside and 1.2:1 on the center frequency. The second is giving you 2:1 at the low frequency and 1.5:1 at the high with a middle frequency of 1.2:1. Looks like the antenna might be a tad long for Channel 1, but don't trust any internal swr meter. Even the cheap RS meter is not a bad model and for 20 bucks, you might consider getting one. Try a third meter and find out what is realy going on.

There are several ways. Radio shack sells a cassette tape set on
learning Morse code. There are also several computer programs that
teach the code, one being Super morse. Do a web search for it. Also
check out these web sites:

http://www.ac6v.com/

http://www.alltel.net/~johnshan/findex.html

http://www.joates.demon.co.uk/megs/N0HFF/index.htm

Does one radio put out a lot more power than the other? I have noticed slight variations in SWR testings when using radios that put out different amounts of power. It really shouldn't matter, but set your SWR while using a simple 4 watter. If you've got a 1:1.3 measured with a 4 watter, it may read as a 1:1.6 with 500 watts behind it, even though you haven't touched the antenna.

In reality the radio should have nothing to do with the SWR. I'm just telling you what I've seen. (hey, maybe I'm not in reality! <g>)

Body handling: HTML body converted to readable text

HTML>Date line, Oct 20, 1999, 10:22 AM, Washington DC.
Tom Banard assistant to the director of enforcement, FCC's Wayne Thomson, stated the following dureing a unannounced low keyed press conference.

Quote: Since the local law enforcement, has recently been given authority to act on, and to correct nuisances generated by illegal amateur radio operators (free banders). We no longer see the need to fund the branch of our agency in charge of enforcement and licensing of amateur radio. It is our opion that our efforts and funding will be better spent on the so called new frontier. Other wise known as the internet.

Operators who are now licensed must continue to abide to all present day guild lines, until Feb, 1 2000. At which time a press conference will be held announcing what additional bands will be allocated to commeral use. What ever is left will be ui\tilized much as citizen band radio is now, with no licenseing requirement.

To sum it up. The federal (FCC) government will no longer have jurisdiction over the frequency allocated to amateur and citizen band radio.

It would be possible that what is now known as freebanding, would be legal providing local and state laws did not prohibit the practice.

Well !!! To tell you the truth, I made this up. But wouldn't it be neat if it were true.

2239. Re: Top loaded antennas on magmount?

Sure you can. Although, if your antenna is over 3 feet, I would recommed one of those tripple (or quad) mag mounts (unless you like watching your antenna fall over in the rear view mirror). But the single 5" magnet will work fine for anything up to 3 feet and should also handle the 4 foot wilson flex or the 4 foot firestik firefly, becuase these two antennas are so lightweight.

And if you go with the Wilsons, you can just cut that ground wire off, since you really have nowhere to ground it, doesn't harm anything.

Source record: 6692

Don't know the mod, however if the radio has a band .45 MHz higher
then the regular band, you will still miss .445 .495 .545 .595 &
.645 without a 10 Kc switch or an unlocked clarifier with a lot
of slide. These gaps correspond to the "A" channels. The frequency
will also jump around between CH 22 to CH 25 just like the regular
band. This is due to the channel selector.

You can improve the SWR reading but not the performance.
In other words, at this point, lowering the SWR further
is just an exercise that you can do to build up your
level of experience if you choose to--it's not going to
improve your range.

> So I was not going to leave good enough alone. I lowered it slightly and the
> SWR on all channels went up! I tried again and finally let it bottom out in
> the base. It went up now to way over 1:2 on 40.

Go the other way.

> So I raised it finally to about .5in(guess) off the bottom of the base. It
> went down. Now it is 1.1 1.4 1.5.

Keep going in that direction.

> I am trying to understand what I am looking at. I thought the longer the
> antenna the higher the SWR while the shorter the lower. This sure seems to
> be working in reverse. (Remember this is a K40). Is there something I am
> missing.

What you're doing is attempting to make the antenna resonant.
It's the radio version of changing the length of a tuning
fork in order to make it ring (vibrate) as efficiently as
possible at a certain frequency. Normally, as the antenna
gets longer the resonant frequency decreases. However,
that can reverse when the manufacturer uses odd multiples
of quarter wavelengths of coax. That's how it works with
the K-40.

This is probably more than you need or want to know.

> The K40 instructions says to raise or lower whip so both (1 - 40) match.

That's the correct thing to do.

> This would seem to indicate they will approach each other or spread from
> each other as you change the length. What I see so far is they all move in
> same direction.

The Channel 1 reading will come up and the Channel 40 reading
will go down as you go. When the Channel 1 and 40 readings
match the SWR will be lowest on Channel 19--that's the best
you can do assuming the normal 40 channels is where you operate.

> Can you help me understand what I missing.

What is it that you're so confused about? Use a pad and
pencil to chart the SWR readings on Channels 1, 19, and 40
as you make your adjustments. You'll see a trend. Just
go in the direction that leads you to the proper result
(SWR equal and below 1.5:1 on both 1 and 40). Base loaded
Wilsons and K-40s are no-brainer antennas. There's nothing
you need to understand--just do the tuning and be done
with it.

If you are using the same (inline) meter with each, then regardless of
that meters accuracy, there is a difference between the two radio's
output impedence. Perhaps one radio is actually slightly off of an
exactly 50-Ohm impedence?

This would easily explain a minor shift in the SWR curve, but not a major
change in the depth of the curve, as you are experiencing. (unless you are
using a very narrow antenna, or an extremely long coaxial cable run)

If you are using two meters (of the "in the radio" type) I would suspect
inaccurate meters.

It's best to think of any antenna as just a plain impedence, that varies
with frequency. It will always have the same SWR curve, no matter what,
when hooked up to a 50-Ohm radio output.

The topic of radio output impedence is one that really intrigues me. Has
anyone had experience with, oh, 75-ohm radio? Is there any major advantage,
other than standardization, to keeping all the CB/Ham gear at 50-ohms, and
all the cable TV and reciever type gear at 75 Ohms, or 300 Ohms?

On 20 Oct 1999 23:38:07 GMT , Robert Joshua spewed forth to rec.radio.cb:
:RJC>I just hooked up a new radio (Pres. Lincoln) to my antenna setup and
:RJC>noticed the SWR pattern across the channels (CB) is different from that of
:RJC>my original radio (Grant XL). I used to have near 1:1.2 on 20 and about

i have one and i love it.
i can't remember off hand which transistor to pull for the modulation limiter because it's been a while but if you pull it, your mic. gain is still in control.
with just adjustments to the pots inside, you can get about 8 good watts am with reasonable swing on a stock mic. you can get 10 but you loose swing that way.
on ssb, you can get 20 watts pep, all with excellent audio quality.
just turn up your "am power" pot to 8 watts on a watt meter and your "alc" pot all of the way for 20 watts. mine has been set like this for 4 years with no problem.
DO NOT adjust the final and driver bias pots near those transistors as you won't gain anything and may damage something else.
if you want to expand your channel "listening" capabilities, you can install an expo 100 kit for 40 up and down.
if you ear a ham, you can do this and change the crystals for 10 meter ssb.
the board is a little tight for a 120 channel expansion but with a little patients, you will be rewarded.
if you are feeling froggy and if uniden hasn't changed the circuitry in the last 4 or 5 years, the final and driver are almost, if not, identical to the pres. 2510.
if you use an outside HEAVY DUTY power supply, you can install the 2510 power mod.
again, if nothing's changed, it is the same board , almost, as the rad shack TRC-454.
the adjustments and mods are the same with the exception of the clairifier mod.
in my opinion, it's a great radio.
good luck and have fun.
jeff

For a base antenna the best practical omnidirectional antenna is a 5/8 wave. You can still find some 3/4 wave antennas but the difference between 5/8 and 3/4 isn't worth the extra cost. If you want directional then try to find a Moonraker 4 or 6. Those antennas were awesome! You can take a 10-meter ham yagi and tune it pretty easily for CB. For base, don't bother with any short, loaded antennas. They are a waist of money. For moble a 102" whip will give you the best performance by far than ANY short antenna no matter what anyone says.

Hello Robert;
If your using the same antenna and coax, as you have stated that you are. And that the SWR is the same on both radios into a dummy load, it sure sounds like the Grant has a better output filter. That is that the Lincoln has more harmonic output than the Grant. If you have or have access to a lowpass filter, you could easily verify this. The Harmonics (say at 54 Mhz) would be reflected from the antenna, but wouldn't be by the dummy load. Thats probably why you are seeing the readings that you are. Hope this helps

Hi Michael,

I wanted to see if you could recommend a radio for me.

I want a 10 meter radio as I will be getting my ham license, but I
also want to be able to talk on CB with the same radio.

I also want good SSB ability, and good power, something between 50
and a 100 watts.

I don't need echo or roger beep.

I want a good quality radio.

This radio will mostly be used for mobile operation in a mini-van.

I am leaning in the direction of the President Lincoln.

Planning on using a mag mount Wilson 5000 antenna.

Thanks,

Duane

Every situation is different but I can't even imagine trying to solder a piece of coax back together. Disassemble the base of the antenna and reattach the coax to the base of the antenna and when complete, seal it up to make it weather proof. This might be a good time to replace the entire coax run.

Hi Mike,
>>Forget about all of these linears, and get something commercial! Get a
>>TenTec Hercules, and SGC, or a Harris! Quit running that 11 meter only
>>stuff!!
I beg to differ on most of your post.

I run all this equipment!

Never had a problem using a Hercules which was a MK2. Good reliability
and clean signal through the filters.

I have two SGC cubes. Initially had burn-in problems while I got a
handle on all those crazy status lamps and the thing tripping out all
the time. Mainly through either overdrive (current trip) or the damn
temperature trip (I run a stiff RF Speech processor which drives the
finals hard). It has run sweet since without problems on all bands at
around 600w out on a peak Bird.
>
>All Junk cept Harris.
I currently use a RF3200 transceiver as the main mobile rig. Eats all
the current smd mobile riceboxes for breakfast with good front end
filtering and a real 150w out, though it's never used due to driving
amp's.

I have never had a Harris amp.

Find me one PLEASE.

Here's a somewhat bizarre question for you.

Since at least _some_ forms of radar guns receive in a range
that also falls in the amateur allocations (to my understanding), what
is the result if an amateur is transmitting on such a frequency within
the reception cone of the radar gun? Will it influence the speed
reading, render it inaccurate, or be filtered out?

Rick

Interesting theory, but the 54 Mhz harmonics would also sum in the forward vector and the ratio would remain the same. More likely the radios are not each the same output impedance. They vary widely. The internal TVI traps are usually adjusted at the factory by hand, and will effect the output impedance also. Remember that your radio presents a 50 ohm purely resistive output impedance at one and only one frequency. Minor reactances from that center are normal, and will vary from radio to radio. I'd imagine even from the same product line. What you are seeing is normal. Adding a low pass filter would change your readings, yes, but for a variety of different reasons, losses, internal reactances, etc, not neccessarily related to the antenna load. Also, SWR meter scales are not always linear. You may find that they give identical readings for one SWR point but not another. Minor tolorance issues.... Don't loose any sleep over them. But they are great learning tools. Regards... 0

We have the President Lincoln "converted" (26.000MHZ to 29.999Mhz) and tuned
for $369.99
,That's with our one-year warranty. This is the new model imported from
France, it has the new 60 Watt final (MRF454) and all the features of the
old model, plus Automatic Squelch Control. But if you aren't looking for
that exact radio we sell the RCI 2950HP that does about 45 Watts, and the
Superstar 3900HP that is a little cheaper, but does 60 Watts as well. The
Superstar doesn't have the LCD display, but it is easier to operate and has
SSB, AM, FM, and all the power too.
The Wilson 500 has the bandwidth to support any of these radios from the
top to the bottom of their frequency ranges. I would recomend any of these
radios, all have the features that meet your request.

This only true if you mount it on top of a van, which looks funny, if you mount a 102" whip on the bumper of a van it will not compare to a good 5' loaded antenna on the roof of a van or car.

if your gonna do serious ham work the best bet is a lincoln with the 50 dollar chipswitch. youll have more features and a better radio than any others out there and it wont fall apart from driving like some others. check http://www.chipswitch.com for more info. youll even have a good 12 meter radio for when you get your liscence.

it has been said that it is illegal to sell 10 meter amps to keep them out of the reach of people like you and me.
there are legal amateur amps on the market that, with proof of license, you can get the mods from the manufacturer for.
it has also been said that hams can use "illegal" 11 meter amps on 10 if they lie and say they're home brew. where the logic is in that, i don't know as they can build their own. why not let them use them pre-built as long as they pass fcc muster?
i asked this same question last month and this was the answer that i got.

>Most hams still
>respect the rules, and would not be an accomplise to a criminal act.
>

here we go again with someone who doesn't know what he's talking about trying
to scare people with garbage information.
if one is caught using a "cb" amp, it is NOT a "criminal act". the confiscation
of one's equipment and the money one pays out is called a CIVIL FORFEITURE.
there is NO criminal procedings involved in any way. this is why the fcc writes
rules, NOT laws. it's easier to get away with the things that they do that way.
if you're going to play cop, prosecutor, judge, and jury, please go to law
school and find out what you're talking about first so you can give accurate
information.

Body handling: Inline uuencoded payload not displayed: Neomorpheous.vcf

Is the Wilson 500 a good antena worth getting to put out 200 watts with a regular 40 non altered Midland 77-113? I have a little will but some people told me that the little will will not work properly with 200 watts. I also have a Wilson 1000 magnetic but it's too big for a car. I wat to be able to put the antena and the wip inside the trunk until I'm on a highway taking a long trip to check on bears and stay awake. Anticipated thanks for your help with this!

--

Insane: Working fifty hours a week in an office for fifty years, at the end of which they tell you to piss off, and you end up in some retirement home, hoping to die before suffering the indignity of not making it to the toilet on time!

>

Hello O;
Interesting information, but I stiil think its caused by harmonics. I
will explain why I think that:

He states that when fed into a dummy load the SWR was the same on both
radios. If it were a output impedance difference in the two radios wouldn't
the same effect be seen? That is the SWR being different on the two radios
into a dummy load?
If you were to feed a 54 mhz signal (assuming a second harmonic) the SWR
on a 27 Mhz antenna would be higher than you would expect being fed with a 27
Mhz signal. So the ratio would not be the same. I think that its this SWR
from the harmonic signal that he is seeing on his meter.

I would have to agree with this, after running a CB shop here in colorado for years and having people bring their Copper readio's in for repair because copper jacked them around for so long that they gave up, i wouldnt order a damn thing from them again. We did order a whole LOT of HR-2510's from them a few years ago that were supposed to be NEW IN BOX radio's which turned out to be re-furbs. Over 50 of these damn radios. Luckily only a few had problems.. I would avoid Copper unless you are buying stuff such as antenna's, mic's, parts etc.. As said above, things suck all around at Copper, My suggestion would be to talk to Rich at Left Coast Radio.. http://www.coaxkid.com.. i've dealt with him in the past and he has a very good reputation with the public and is a great guy. If i had to rank all the shops on the net, i'd say his is #1, Bill at Bills 2 Way is good too from what i hear, his site is http://www.bills2way.com. Both Rich and Bill back up everything they sell and will work with you through your worst radio nightmares :)

Just my 2 cents :)

David

2301. Uniden PC122XL Transmit Questions/Problems

Newsgroup: rec.radio.cb
Date: 1999-10-21 00:00:00 UTC
From: Jonathan Cunningham <dawfun@seanet.com>
Message-ID: <380FD624.F4AE6581@seanet.com>
Source record: 6750

Hi folks,

I recently had a PC122XL installed in my Pathfinder and I can't seem to make sense of a couple particulars with this radio (seeing how I'm a total Rube when it comes to CB, this is no surprise to me).

1. I've noticed that when I press the mic key, the RF meter lights up, ostensibly to let me know how much power I'm transmitting with (the manual seems to corroborate this). When I press the mic key in USB or LSB mode, the RF meter lights up for a brief second, and then goes dark...even though the key is still depressed...Is this normal?

2. I have yet to get anyone to acknowledge my presence on AM, LSB, or USB. I'll wait until I get a good strong signal from someone, then when there is a break in the conversation I'll chime in with "Breaker, 1-7" (for example). Nobody EVER answers. This has been the case as long as I've had the radio, and I"m starting to think that something is wrong with the mic or something. Anyone have any tips on how I can get some response from fellow CB'ers?

Would either of these problems be affected by SWR? (I had the thing professionally installed, and am assuming that they did a good job in tuning up the antenna).

Thanks much,

Jonathan

I have seen 2x2879's swing a bird 43 forward to more than 700 bird watts at only 19 volts, I know I will probably get flamed and called a liar, but it is true, and there is no need to tell me about harmonics because this little 2 pill is real clean it puts only one spike on the spec analyzer and that spike is right where the radio is transmitting, but it sure is hard to get all of them to do these kind of numbers.

That depends. If you have a metal toolbox, that makes a great place to mount a centerload antenna such as a Wilson 2000, or 5000 Trucker or any exposed coil antenna. Long whips are great on the box too, but can be too tall. It all depends on what kind of talking you do,and how practical you need to be. If you don't have a box you can mount a whip on the bumper. A lot of guys around here love the mag mount Wilson and K-40's stuck up on the roof. Hope this was of some help.

Message-ID: <380FDC48.435F6539@rica.net>
Source record: 6755

Help !!!

Been working on my DX-55V for a no audio problem, found that TR16 squelch switch was clamping down the audio, when the bias was removed from it via removing R60 the audio was normal. Found this signal comes from IC1 a LM324 quad op amp, replaced it with no results, then removed 8V from squelch circuit problem still there, removed D28 xmit switch, problem still there, if pin 10 of IC1 is pulled low with resistor to ground audio is fine, but otherwise pin 8 keeps TR16 biased and shuts down audio. If anyone has an idea or seen this problem before please email me. Thank you all for your time, appreciated it !!!

The K-band RADAR has a frequency of 24.15 GigaHz. This is an FCC allocated frequency and is not shared with the ARS.

A few years back, some students at Georgia Tech devised a "jammer" that operated at this frequency. The device was found when a student was stopped for another infraction and the officer's RADAR kept displaying a steady 55 mph target speed (even though the student was stopped at the time)

I used a five foot Firestik II with a tri-magnet mount last year. It worked pretty good. If you decide to use a long Firestik with a tri-mag put a heavy duty stanless steel spring on it. You might also want to use a heavy duty quick disconect like the Hustler QD2 (pure stainless steel,) as well.

They do work on the Doppler principle. I don't know the exact details though. Arnie? In the 70's they were checked in the field for proper operation by striking and holding a tuning fork in front of the unit. If it gave the required reading, the unit was working correctly. The officer was required to testify in court that he tested the unit (and that it was working correctly) both before and after the violators tickets were issued.

Also the radar units were used to check calibration of the police cars mechanical speedometer. When you point the radar unit forward out of a moving car, it will read the cars speed. The speedometers were often off by 3 to 5 mph. A calibration correction chart was kept for each car, and was required for testimony on any tickets written using the cars speedometer.

Some more tricks played by radar cops in the 70's:

Parking at the end of a runway and measuring the speed of aircraft (just for fun). Some officers in stationary cars were too lazy to turn around and measure a car coming up from the rear. They just aimed the gun at the patrol car's rear view mirror and read the speed. If you could see the car in the mirror, so could the radar gun. Officers in a speed trap often would use several guns side by side. No interference was noted. I think that if there was interference, the gun would just refuse to read, rather than give a wrong reading. The officer was still required to make sure the visual estimate agreed with the gun's reading as a precaution previously mentioned...

The maco is supposed to have a wider band coverage. The I-Max is better than the 1600. The I-Max handles the weather better and is a lot easier to put up (only 6lbs). Also the imax might be safer in a lightening storm. I have a radio that covers 25.165 to 29.655 my swr's are 1:1.7. They stay under 1.3 till I get to 28.315, then increase from there.

Hello Kent: The Motorola CB Radios used a "Motorola Commerical look a like mic". This mic had a internal pre-amp and a adjustable volume control.
The mic cartridge is a dymanic type, a wire would around a magnetic. The super thin dymanic mic wire is famous for breaking, resulting in the mic not
working. I used a old Commerical Cop type Motorola bullet proof mic. A good tech could wire it in. Also the popular pre amp mics might work in the
Motorolas. Or even a new or different mic dymanic cartridge.

Robert,

VSWR is a voltage ratio. The error is probably in the graduation of the meter face. It could also be an erroneously set trim pot inside either unit. The objective should be to shoot for the lowest VSWR. This will read the lowest on any meter. If you like, you can put a 50 OHm dummy load in placeof your antenna and check for a perfect VSWR but I think you'll find that all meters agree with a perfect 1:1 VSWR reading.

at $76 a pill from rfparts.com that would be $304 just for the transistors when i could buy a brand new amp for $299 from left coast radio. i'm not saying im not going to rebuild my amp its just that $300 to fix an amp is a little pricey and also that people say to use a set of matched quads however no one will say why. i assume you get better performance but what is the performance increase? and is it worth it when single pills are $17 a piece?

Yes and no. The theory is correct but; they don't, and haven't
considered the real world (actual) gain of a stainless steel 102" whip
compared to better antenna (sometimes shorter) designs.
That does not mean that the 102 is not a good antenna, and it
does not mean that other antennas can blow it away either. It means
that some antennas can show marginal gains over the 102.
If these antennas are shorter, then that antenna truly is a gain.

true statement both have won, and as you know side selection and many factors play to who wins on any given day if you run either amp you have a great chance of winning. In my opinion for all intensive purposes they are basically the same, don't take this the wrong way but when an x force wins I feel that same person could have used a davemade and won also , just as if someone used a davemade and won they could have used an x force and won just as easily it also goes to show the dominace of the design being used.

Galaxy radios are manufactured by Ranger Communications, so it then comes down to features. Go with the 2950...if you want a base station version of the Ranger 2950 mobile, get a Galaxy DX 2527 base. No, Copper Electronics does not sell refurbs...they do have some items that are very low use that have been previously sold and returned that are offered for sale. But, they are listed as being so low use that they are " Like New " in condition, but in fact are not new. This is clearly stated on the website, and in the printed catalog. So long.

Right again, ex-law enforcement one ... :-)
Doppler is the principle on which RADAR is based. The principle simply states that a signal's frequency is changed based on its relative motion.

As taught to police officers in RADAR class:

When there is relative motion between two objects, one of which is transmitting wave energy, the frequency of the signal as received by the other object changes due to that relative motion. How much the frequency is increased or decreased is determined by the exact *speed* of the relative motion.

Tuning forks are still used to *test* the calibration of the RADAR unit. Typically a 65 mph fork and a 35 mph fork are used. The test must be accurate to what? Plus or minus one mph.
The only thing that has changed since the 70's is that the test may be conducted prior to and after shift (normally eight hours) and will still be acceptable.

I've heard of most of these *uses* for RADAR. One that was used in the bad "old" days was to select a speed on the "lock" feature (which is no longer available) and snooze until a speeder woke you up. (not much of a tracking history there, huh?) Not that I ever did that.

And I agree with you, it is not the best performer in my book by any means,
I dont care what the books say, not for all around transmitting, it is to
cumbersome and it will only perform if mounted on top of a good
counterpoise, thats just my opinion of what I have seen throughout the
years, it is not worth the trouble you get with it.

I agree that they are both good, but I see the same numbers out of other amps as well. I didn't say all amps but others. a lot of the winning brand has to do with where your located in the united states, one of the reasons so many people hear about Dave boxes winning is because there is so many of them out there, now IM not ragging in any way, just saying it like I see it in the south.

Those are theory, mostly old. The whip works real good in some case's, but in most case's a good loaded antenna will outperform it because of its mounting restrictions.

I cannot tell you if anyone is still making this but I can tell
you that CPI incorporated that light in its receive preamp box. It
was not just a stand alone light although it would be real easy to
make one if you could print the actual sign and backlite it.

> > -RC

Some meters need a little more than 3 or 4 watts to read
accurately. This having to do with the sampler and the diodes used.
Also, do you recalibrate the meter when you change frequencies? If
not, I could suggest that your Lincoln may not be putting out the
same power across the band as the other radio and this would change
your "u" graph to show a higher swr on one or both ends.
Another suggestion is that the Lincoln may be reacting
differently to the swr than your other radio. This could mean that
the power from the Lincoln could change depending on the
swr/impedance it sees. In one instance it could like the impedance
and load into it better on one end or the other or someplace in
between. Depends on the tuning of the Lincoln's output stage.
I must point out that if you're seeing an swr below, say, 1.5 or
so I would just leave it alone. This is a very good reading and
attempting to get below that would just be an excersize in tuning.
There really isn't anything to be gained practically unless you
envision running several hundreds to thousands of watts.
Off hand I would say its a combination of the radio's tuning and
the meter's sensitivity or ability to read correctly with low power.

no antenna will put a signal strait ----------> out
i think they have a ----------> ---------><---------- obsession

but the ---------->
can be used to indicate the amount of power radiated
and i am not talking about the radiation pattern
and coils radiate like staked loops
and the radiation resistance is about 1/8 to 1/4 if lucky if not
it is about 1/10 to 1/100 of a ohm basically negligible as compared
to the rest of the antenna
and yes i consider 20 to 40 db down as negligible
and if you want to get ----------> in to it well i can do that
(note) this is not radiation patterns but shows what part of the antenna that
radiates usefull energy

1/4 wave whip over ground
relative radiated power

I've found the same thing with my northstar 3000. If I leave the
variable power setting on low it will give me a different swr reading
than it does on high or medium. Granted I'm not using the best swr
meter in the world (Rat Shack) it still changes depending on the power
setting I have it on.

There's a big difference between being told you're
wrong and being proven wrong.

I'm just like the next guy; I hate being told I'm
wrong and will usually speak out against the person
telling me I'm wrong. On the other hand, when I'm
proven wrong I just have to suck it up and move on.
Any continuing rebuttals beyond that point are just
the mark of an insecure/immature person.

Perhaps the amplifiers work okay, but lots of people have been
returning the SGC2000 rigs. The icom marine rigs are much
more reliable. (sad to believe but true) then theres this other
company that people talk about but I forget their name... that make
marine HF transcievers....

this is not one of my stronger suits but this makes sense because the lincoln
is a broader banded radio with broader banded output filters than the grant
which would allow more harmonics through.
2 cents spent.

OK, here's something else that's interesting. After tuning the antenna for a 1:1.2 on channel 20 on the Grant, I switched over to the Lincoln and got a reading of 1:2.2 (on channel 20). I needed to _re-tune_ the antenna in order to lower this below 1.5. Funny thing is, and I mentioned this before, is that with the dummy load, both radios read the same SWR...

Go out and check your radio with the engine off at various times of
the day. If you hear this noise exactly the same every time you
check, then theres something wrong with the radio. However, if you
sometimes hear the channel really quiet and clear, then the only thing
you can probably do is turn down your RF gain when the noise comes up.
Also check your antenna connections, maybe there is a short.

2379. Talkback/Roger Beep in 79-290?

I don't reacall the K number (they use the K10's now) it was a grey unit with a black face. The lockout was about center of the unit and had three rotatable numbers and (of course) the "lock" set button. We used it for VASCAR (Which I'm still certified in) because it also had an elapsed time feature.

>I've often wondered how you guys get an antenna 90 feet up in a tree?
>Do you climb the tree to mount it? If so, aren't you scared of
>falling out?

I use tree spurs and a climbing belt. Use a rope to repel back down. But I was a tree trimmer for 10 years so I have that equipment on hand. Tree spurs are like the pole spurs that linemen use except they have a longer shank to pierce through the bark deeper. Have you ever seen a lumber jack show and they race to the top of an 80 or 100 foot pole? Same type of deal. Once you get to the top you tie in around the main trunk. Coming down is easy, just kick out and lean back. Just like repelling off a rock cliff. Of course pine trees are so easy with all their close branches no spurs are needed really. Keep your weight (feet) in close to the trunk and the limbs will hold you fine. If you know how to do it fear of falling doesn't exist (well almost doesn't). If your not a little scared then your not a safe climber. Some guys rent or know friends with bucket trucks too. (cherry pickers) But when it's in a back yard many times a truck cannot get to it. You can use the tail of your rope that your tied in with to pull up antenna parts. The tail of the rope hangs down to the ground. When you descend, you go down and the tail goes up. You have to keep an eye on your tail as if you run out of length you hit the ground hard! You must re-tie before you run out of rope. With the spurs you can run up and all over a tree like a squirrel, but practice makes perfect. Proper knots in the rope are needed as well. If you don't know them, DON'T TRY IT. You can find or contact your local electric company to find out where a tree trimming crew is (they trim around the power lines) and then you can stop and ask one of the guys on the crew if they will come put up an antenna in a tree for you. For a small fee, one guy usually will on a weekend or evening, I did anyway. A 90 foot pine tree is like a walk in the park, if you know how to do it.
That's how I do it anyway. Hope that sheds some light on your question.

Mike

Sammy, Sweetie, pleeeeeeeeeeeeaaaaaaaaase!

mf_luder is a troll, a una-basher, and a crotchety old loser.

I, on the other hand, am a breath of youth and freshness, bent on
raising the level of repartee here, confidence in our future in this
lovely hobby, and on finding a studly male ham with a tall tower.

Bob, which antenna is best is open to great debate. I personally use
the Wilson 5000 and like it very much. Others like the open coil types
and they seem good also. As far as the "best" method of mounting drill
a hole in the middle of the roof. It will give you the best performance.

Who needs a 'no-code-tech' ticket. i spend most of my hf time on the 20mtr cw part of the band anyway. cw is funky and a stupid thing to force on people but it is sort of fun if you are half-way descent at it. ya gotta practice once in a while to keep the speed up but it's like any other useless thing people work at; (playing and instrument etc) some think it's fun others don't...

'been on the ham bands for almost 20 years withOUT registering my rights away to the federal socialist police pigs. Anyone with enough money to buy a radio should just go ahead and do the same. Signing that license is basically giving away at bit of what little protection you have from the government. Don't be an idiot, just bootleg.

If your not scared .. your not human. The tree is in the woods behind my house. I read the post that indicates that I should use tree spikes and a belt, If I can get some of those I will "try it" but my original plan was to nail steps on the far .. or "woods" side of the tree so that if I had to do some maintenance I could easily get back up there. (the kind you see going to tree forts and such.) Or maybe put up another antennas for other band operation below it.
I think that from the posts I'll get the I-Max 2000 for 10 - 11 meters. Cost of an antenna at <$100 is not a problem and the 24 foot length may get out better than the 18 footers. But I do have a good question. If I intend on using one antenna for both 11 and 10 meter operations, Is there a single legal radio I can purchase to cover all Freq.'s across the 10 - 11 spectrum? That gut at ExportRadios.com seems to think that his President Lincoln converted and tuned for $369 will do what I want. (but how can that be legal unless you can chop the power when on 11 meters to 4 watts somehow? I play by the rules so that others may enjoy the same hobby when on 11 meters. Makes it more challenging to DX also.

Yesterday I DX'ed on upper 28 from NH to FL! (yes on my stock 148 gtl st and the Wilson 5000 that you recommended.)

Funny that nobody confirmed nor suggested coax.
I assume that the RG-8 is ok for a 150 - 170 foot run.

I think your wrong Jay,cross polarization of these 2 antennas would
make them almost invisible to each other,this effect is pretty
pronounced on 11 meters,thats why mounting a yagi(horizontal) part way
up a vertical tower won't degrade the patterrn enough to worry about.
Why don't you agree? I'm open to a little education.

A CB radio is licensed, there is just no paper work to show for it.
Check the manuals you get with the radio. THere are FCC regulations that
you must follow. Simply posssing the radio makes your legal and licensed
to use. Both FRS and CB are the same.

I agree that we're both entitled to our respective opinions. The fact that I support the rules and regulations, and you try to justify breaking them pretty much decides who's "right" in a legal sense. Now, whether the "popular" opinion swings one way or another remains to be seen. Sooner or later, people will get fed up with other people who ignore "inconvienient" laws, and something will give...

That being said, I just enjoy the debate. I am far from the "Joe Legal" that I may sound at times. I have no real problem with people running power or extra freqs as long as they do it responsibly, and cleanly (Which means that they not cause undue interference to other people). I have more of a problem with the social misfits. I really have no time for people who use CB as some form of mental masterbation, with foul language, inane comments, jamming, music playing, excessive noise toys, and no sense of the word courtesy. I would rather have the band full of 1 KW stations running in a respectable and courteous fashion, then a band full of 4 watt mental deviates.

But again, that is just my opinion, the law still stands, until someone changes it.

> copout for not opening up GMRS as a CB band(like it used to be),
> that's all.
>

The state that GMRS was in, was done at the request of the PRSG and other "serious" users, as a "barrier" to prevent GMRS from becoming another 27 Mhz CB. People often wonder what became of the original CB users, that wanted CB to be what it was originally intended, a short range personal radio service. Those people mostly moved up to GMRS, to escape the sewer that has taken over 27 Mhz CB. People who want to be able to depend on their radios to get necessary, and possibly important messages through without getting jammed by some 15 yr old mental midget auditioning to be the next Howard Stern, or another guy trying to talk to bumfutz Kentucky, from northern California.

FRS was designed with avoiding "another 27 MHz debacle" (a quote from an early interview over FRS) in mind. The idea is SHORT range radio. I agree that FRS range is probably TOO short. If it could be made to carry

5 miles RELIABLY then it would be better.

News flash! GMRS has relaxed much of its licensing requirements. The price is cheaper, and the forms easier to complete.

But what do you really want? Do you want to have reliable communications with family/friends, or do you want a free for all anything goes band? You now have the choice of both (As well as ham radio for those willing to put in a little work).

Heck if all you want to do is reach out and touch someone, there's always internet chatrooms......

You're arguing semantics here. Depending on the case, it could very well become a criminal case, depending on what the particulars involved (Deliberately interfering with emergency comms is a felony as is broadcasting a false MAYDAY). I've read of cases where people actually got JAIL time, for radio related actions. I'm not saying that this will happen everytime, but it has the potential to be considered "criminal", depending on what you're guilty of.

If it would make you feel better, change the word in my original statement from "Criminal" to "Illegal". The statement is still true.

># of pills you have i dont know how a mod to the amp can see more watts.
The problem here is that different watt meters can give different
readings.

You also have the users who insist on feeding their antennas with a
given length of feeder, some resonant, some not.

Already you have several variables.

IMHO, and some of the more tech'd up can tell me otherwise, but if you
want to get near the truth.

So for AM.

1. Firstly check your amp into a quality 50ohm dummy load on the bench
with a good stiff power supply and the radio you intend driving it with.

2. Then, connect the rig and amp in the mobile. Use a non-peak but
average reading Bird or similar industry standard power meter connected
as close to the antennas feed point as possible.

3. Then, after tuning the antenna for minimum reflected power, make a
note of your vswr reading.

4. Then turn the slug to read off your forward.

5. Then subtract your reflected from your forward and there you have it,

the true output of your mobile on AM under un-modulated conditions.

Yes, I know in a competition all this swing thing takes over from
physics but...

My 2c, I mean 2p.

Phil / UK

Message-ID: <jfZP3.172$wU3.98950@ratbert.tds.net>
Source record: 6865

Quick post to simply say.. I dragged an old 139xlr out of my closet, threw a ragged-looking D104 TUG-8 on it, and got it fired up... did the conversion to allow coverage from 26.0850-28.0050. (Of course, I had to broadband it a bit) Don't have the meters anymore so didn't touch the wattage (other than adding a tad of swing), but attempted to unlock the clarifier. Funny thing was, it increased the spread on the clarifier, but only on the receive- the transmit remained locked... this is my understanding of the mod:
1)Cut R-117
2)Cut D-30
3)Find the backside of the clarifier knob.Follow the PURPLE and BROWN wires and cut them just before they connect to the PCB.
4)Solder the PURPLE wire to an 8 VDC source.
5)Solder the BROWN wire to GROUND
Am I missing something? Or is this ancient rig just messed up somewheres... If anyone can help, please do.. One other question.. besides crystal swapping, Supposedly this 858 chip is capable of alot more than the 192 "channels" I acheived. Normally, I wouldn't care, but this rig for some reason broadbanded all to heck- I seem to drop barely a quarter power when going all the way up or down.. so a bit more would seem to easily be handled...
Alright, I'll shut up, (yes I'm long-winded on the air too) Thanks in advance, Tinker (ch. 23, Central NY)

Ahhh....

Dummy loads are by design purely resistive. Antennas are
reactive.

If the tuning changes, then the antenna is interacting with your
radio.

I would suspect that your radio is NOT 50 ohm output, and probably
needs adjusted.

The antennas Sheila is using are the Moonraker Beam and Starduster Ground Plane antennas.

"Cross Polarization", nobody said anything about Cross Polarization. And if one of the antennas effected the other antenna, even in cross polarization the pattern would be unwantingly significantly distorted.

And I must disagree with you here, if the ground plane antenna is mounted to close to the Horizontal Beam, the beams pattern will be distorted, by the ground planes, ground plane radials. I have seen this on installed antennas, and have analytical measurements from Eznec, that show a distorted beam pattern. But to be fair, I have also seen the beams pattern not distorted. But the closer the ground plane radials are to the antenna, the more the distorted pattern effect will be. What makes the difference, I don't have the answer. But I will disagree with you on, you can not just put a ground plane type antenna up over a horizontal Yagi, and not have some effect on the Yagi beam antennas pattern. Most vertical antennas mounted above a horizontal or vertical, or a cross type Yagi beam antennas, are the fiberglass type antennas that do not have ground plane radials, and do work quit well.

Also the ground plane antennas that are available, (or should I say) still around, come with 3, and some come with 4 ground plane radials. If the ground plane antennas with the 3 ground plane radials, are mounted above a horizontal Yagi beam antenna, at least two of the radials will not be parallel with the elements of the beam antenna, causing the beam antennas pattern to be distorted, in such a way that it appears to be a omni directional antenna.

So a ground plane antenna with 4 ground plane radials, I would mount well over a 1/4 wavelength above the horizontal Yagi beam antenna, with the ground radials facing the same direction as the boom and elements.

Chris,

Its all a matter of opinion unfortunately. I think the D-104 is good not only because it sounds good, but it is easy to handle. I am not sure (no pun intended) about that Shure mic, but I hate plastic parts on mics. Its too noisy and squeaky when you key it up.

Also, don't you hate all those Civics running around Poughkeepsie?

Bob.

wrote:

>If it is illegal to sell an amp for use on 10 meter, why does the FCC allow
>over 200 watts on the band? (Depending on license.)

You're looking at this backwards. The question should be:

If the FCC allows over 200 watts on 10 meters (which it does), why is
it illegal to sell an amp for use on 10 meters? And the answer to that
question is, it isn't.

First of all...it is not illegal to sell an amp for use on 10 meters,
PROVIDED that it is being sold to an amateur operator for use at that
operator's station.

Secondly...licensed radio amateurs are permitted to construct their
own amplifiers for use in this or any other amateur band, and they may
also sell such amplifiers to other amateurs, or to a dealer - which
may then resell them to another amateur for use at that amateur's
station.

Third...amateurs may also legally modify an amplifier for use on 10
meters (or any other band) at their own stations.

Fourth, there is no regulation preventing a manufacturer, or an
amateur operator, from building a transmitter that can exceed 200
watts on 10 meters.

There are restrictions on the building or modifying of 10 meter amps
by hams, but such construction/modification is not entirely
prohibited. The reason for all the restrictions on 10 meter amps is to
keep 10 meter amps out of the 11 meter CB band. Or that's the way it's
supposed to work, anyway. Anybody who's listened to The (Toilet) Bowl
lately knows that in practice, things aren't working out quite the
same way the FCC intended because people in the CB band are still
getting amps from somewhere - illegally, of course.

73 and good DX'ing,
John D. Kasupski

Ok, I've got the antenna tuned so that I have less than 1.5 from 25 to 40 (CB) and then 30 channels above that (to about 27.705, which aren't too useful for me). I'm going to try to lengthen the tuneable tip on the Firestik IBA-5 and move that on down to a more useful range of 1-40.

If the Lincoln _does_ have a problem with not presenting the antenna with exactly a 50-Ohm impedance, BUT I can get the SWR low on the channels I want, is it ok to use w/o adjusting or would I need to get it adjusted right away? and does this happen very often, that is, radios being off in impedance? The Lincoln is brand new...

2437. Stupid People.

Newsgroup: rec.radio.cb
Date: 1999-10-22 00:00:00 UTC
From: Bob <Bob@bob.com>
Message-ID: <3810A51E.1210A45B@bob.com>
Source record: 6886

Rant Time:

I can't help but say this, how can anybody in their right mind sit
here and look at shit like this. I am watching people posting
the stupidest shit about coils. Flat vs. square coils, 2 vs. 3 coils.

Get real people, instead of making shit up - or saying what you *think*
happens or on how something works - why not educate yourself?
Why not learn something and KNOW it to be true before
you come on here and make ridiculous statements?

Bang heads on mobile antenna - get over it - there is barely
a difference in these antennas! Efficiency is all you can compare -
there is no such thing as "gain" with these antennas.
Nice animated GIF showing some cheesy arrows, yeah, that's
how it all works.

Try, the angle-of-radiation is determined by the antennas height from
(above) ground,
and in most mobile cases, this distance is lower than a 1/4 wavelength.
In most cases, this angle-of-radiation is very high, around 45 degrees
at its lowest point. Drive your mobile up onto a big mountain, and guess
what - its possible that take-off-angle could drop as low as
10 degrees - its all determined by the surrounding earth (related
to its conductivity and height in relation to your antenna)

You bullshit about radios and antennas may fly with the local
crowd where you hang out, but don't bring your false shit on
here and expect to everyone to be as stupid as you (you meaning
the stupid reader).

Bob.

A new radio should be right, right out of the box. If the impedance was more than 5% out of tolerance, I would be a little unhappy. Beyond that, get the dealer to exchange it or calibrate it properly; poor quality here might well indicate other poor quality detailing elsewhere. As previously mentioned, just connecting it to an swr meter and then to a dummy load of some sort is all it takes to learn the true impedance, and then the internal calibrations should be fairly easy.

This is an easy kitchen table job. Find a very short piece of 50 ohm coax--RG 8, 58, 213--any 50 ohm will do, but you only need a few inches. Properly attach a PL 259 to one end-solder properly. Use your ohm meter to verify that the circuit is open. Go to RS and pick up a 100 ohm, 1/2 watt or larger resistor. Use your ohm meter to verify that it is 100 ohms +/- 2%. On remaining end of coax, attach the resistor between the center conductor and the shield. Again soldering this is best. This will give you a very precise 50 ohm load. Be aware that you can't apply much power to this for very long, or get a fatter resistor! Attach your swr meter in series and it should be FLAT. If it isn't, then the radio impedance is not 50 ohms.

The truth is that most people on this ng have no idea what they are talking about, but then they shouldn't be expected to know much. CB was intended for a non technical group. The CB user should be able to buy the radio off the shelf, wire it up and talk. It is that simple. Anything beyond that is window dressing. Notice that there are very few questions about genuine repair issues.

A couple of years ago I saw 3 different HR-2510's have a similar problem. Their SWR was much higher than other radios (Grant ect) on the same meter, cable & antenna. If you physically took the top cover off the radio the SWR lowered in line with the other radios, but replacing the cover made it jump up again (we discovered this by accident). We were able to retune the antenna to a low SWR, but then it was off on most other radios. The people would have never known if they didn't already have a radio tested on their antenna. I wonder if the LINCOLN mentioned in this post lowers it's SWR if the cover is removed??

CNHOPE1 wrote:
>
> What is better a antenna that has a flat coil or a round coil?????????//

If you are referring to the wire in the coil itself, flat is better. It has less capacitance between the windings and consequently lower loss. However, I admit that at 27MHz you'd need a lab instrument to notice the difference. If you are talking UHF, the reactance from a round-wound coil will reduce the possible bandwidth of the antenna - when compared to a flat, or ribbon, wound coil. But you must also consider that the coils in VHF & UHF antennas are used for phasing. In a CB antenna they are used to shorten the physical length of the antenna for convenience.

I hope I answered your question. 8-D

>
> -RC

Perhaps you misunderstood what I have said or mixed in what
others have said with mine.
Your radio wants to see an optimum antenna/coax impedance of
about 50 ohms so that it will deliver it's power to that system
efficiently. This is assuming the radio was tuned into a 50 ohm load
to start with. Since the radio is new and untouched inside, I would
bet the tuning is ok.
However, you may have a strange impedance happening due to coax
lengths and the meters' own internal line length. This slight change
in impedance might be affecting the way your radio see's the antenna
system as a whole. If the impedance moves in one direction it can
allow the rig to put out more power and in another direction it may
put out less. You may be experiencing this.
With the broader banded radios the output stages can be a bit
finicky in the way it loads into slightly different impedances than
what it was last tuned for.
Someone also pointed out that you may have an appreciable amount
of harmonic energy being transmitted from that radio. If this is the
case you may never get the antenna system tuned correctly. As an
example let me say this, if you have a lot of 2nd harmonic energy
leaving the rig you will see that much more reflected power coming

back because the antenna is not going to absorb that frequency and radiate it. The more reflected power you have the worse the swr will read.
Now I have seen some rigs that put out a lot of crap besides the intended frequency and these do screw with your head when it comes to swr. I haven't seen a Lincoln or 2510 do this unless there's something wrong with it. But it can and does happen to these two rigs when there's a problem in the final section.
The test to see if this is happening is to scrutinize the output with a spectrum analyzer. Not a likely scenario for you as these can be pretty pricey devices. In lieu of the analyzer, install a decent low pass filter directly after the radio and before the meter. If the output power drops more than say a fraction of a watt, you may have had some harmonics leaving the radio. If this is the case you'll also notice your swr falls back in line and follows a more normal trend. You will most likely see a small drop in output because the filter does introduce some insertion loss just having it inline. Again, this loss should not be more than maybe a 1/4 of a watt.
All in all, the Licolns and 2510's are very good radios and should provide you with years, literally years, of great service.
BobC

>
I think you wanted to say put a 50 ohm 2 watt resistor on the
end of that coax because using the 100 ohm resistor will show at
least a 2:1 swr.
Also, you can install this 50 ohm(or something pretty close) 2
watt resistor inside a pl-259 and use this as a dummy load.
Soldering the resistor inside the connector will provide some heat
sinking for the resistor and allow some extended operation at 5
watts.
Measuring the output impedance of the radio is a bit more
involved than this and most likely the radio is just fine.

In actuality the omni mounted above the beam will change the
pattern of the beam somewhat. It depends on how close the omni is to
the beam and possibly the style of beam. This can happen w/o an omni
and just something in the near field of the beam. It could even be a
tree at what you might think is a good distance from the beam.
Everything in the near field of the beam can have some affect on the
pattern.
Going a little further, the affect can be more pronounced at vhf
if you don't route the coax in the right direction.

> http://community.webtv.net/thumper485/THUMPER485SQTH
>

I have found Shure mics to be very good for most installations.
They are very rugged and have quality cartridges and switches. I
would consider using a Shure before a D104 although the D104's can
be used just as well.
The Shure mics come either amplified or non amplified in mobile
and base configurations. Depends on the model and what radio you
want to use it on.
There's nothing wrong with using an amplified mic on SSB if you
can figure out how to run it correctly.
Ideally you would run a mic that is close talked for keeping
down room echoes and other noises. You can do this with an amplified
mic as well if you turn the gain down.
Just find a mic that suits your voice and room acoustics and run
with it.
As a sidenote, you can optimize the quality of your tx sound in
the radio by carefully tuning the carrier generator to the filter
characteristics and sometimes modifying the audio frequency
responses of the mic amplifiers in the radio. Then just find a good
quality communications mic that has the right response for what you
intend to do with it.

Ok you are talking about modulated watts correct, I would say check the peak power for starters if it is not in proportion to the rms power they probaly are false rms readings and just a case of overdrive. , What were the results of the spec analyzer how many db was the 2nd and 3rd harmonic.?
If i remember correctly #12 said he can make a texas star 2 pill show big numbers on a bird meter What size slugs were you using I have yet to see to many bird slugs that read identical to each other.

This is a Usenet newsgroup. It is not a mailing list. The only person
who can remove you from this newsgroup is YOU. So you can send
messages like the above until you are blue in the face, or you can
learn something about your computer and do it yourself, which is the
only way it CAN be done.

If you'll stop ranting like a dadblamed idiot and tell us what kind of
software you're using, someone on here might be able to tell you how
to do that...otherwise, you can remain clueless and the rest of us
will just killfile you so as not to have to read your sniveling every
week. Your choice.

2528. Re: Why SWR not same for different radios?

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: rjchen@leland.Stanford.EDU
Message-ID: <7ut12k$3d8$1@nntp.Stanford.EDU>
Source record: 6977

Ok, some updates...I tried the resistor at the end of the coax but probably didn't do it right since i got SWR greater than 3 (same for both though). But I figure this is the same thing as a 50-Ohm dummy load and they definitely show the same SWR with that. So, I'm guessing impedance is not the issue here...

Regarding possible harmonics problems, would RS sell low pass band filters? and what frequency range should it cover? or does that need to be specified? and would Chipswitched radios have more a tendency to put out these harmonics?

This morning i switched over to a different antenna, a Wilson NG-4 no-ground. With this antenna, both radios show the same SWR pattern! I have no idea what's going on now...Maybe I need more grounding on the IBA-5...

2529. Whats the deal with multiple Ham call signs?

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: Wildcat <wildcat@tp.net>
Message-ID: <zSnQ3.3526$14.87582@typ12.nn.bcandid.com>
Source record: 6978

I cant help but notice there are those with multiple Ham call signs. I realize that one can have a call for each club and/or repeater, as well as their own personal call, however why would anyone want more than one call to use in their day to day QSO's? Experienced Hams please reply.

2530. Re: High Prices

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: AB7RS <tglenn@imt.net>
Message-ID: <381211A7.31FD@imt.net>
Source record: 6979

Charlie 3,er excuse me its "candy man" now(wonder why he changed it?)is in my opinion a good one to stay away from.I have spent thousands of dollars there and while his prices are OK for a middle man(I now deal with HIS sources)he screwed me so much I could hardly sit down.90% of what I ordered was for resale,I recieved junk that had been previously opened,used stuff,a power supply without an original box or paperwork that didn't work and looked like someone had spilled (puked)raisin bran on it.All of this was a pain in the rear to get corrected but I kept using him because he is willing to sell the illegal stuff that gives such a great profit.
The last straw was a very expensive Galaxy 1000 base amp,when I got it the box had no padding at all and the tubes were already installed(not good).When the customer came over we plugged it in and all the tubes crashed,seems one had a shorted filament,I should have checked? The hell I went thru to get help with this and the out of pocket was too much,the tubes I bought from him as replacements were not the good(?) Galaxy tubes but some flimsy looking sweep tubes,plus after playing with the amp and giving it a good look it was obvious it was a piece of crap even if working properly.
Don't know about Bills and everybody knows about Copper.I hear "Skipshooters in
mt is good ;)

2531. Re: HELP HELP... Power Supply

Any radio can talk worldwide barefoot.
I think the 2950 is a better rig for anyone who may someday want to
get on 10 meters because it works well there and the Galaxy is a joke on
10.Plus the 2950 doesn't have a transvestite board.

Hey why dont you ask Gun what his two pill does, this might be a little easier for you to swallow since it would be a Dave box doing the unbelievable numbers.

Thanks man. I did say that on a average a two pill generally does around 500 or so bird at these volts we have been discussing, this one is just one bad mutha!!!, I do not know how I could of explained the situation any better, but I knew that it is hard to believe, but it is true and if you noticed, certain people did not reply or flame because they to have seen it out of some of their 2 pills, again it is not real common, but very feasible. Its seems about as crazy as seeing 8 x 2879's deadkey 4000 bird watts, and stay together for 30 seconds @ 20 volts and not blow, crazy but true.

2539. Re: Whats the deal with multiple Ham call signs?

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: njmedman@aol.comnoemail
Message-ID: <19991023162440.26112.00000312@ng-bj1.aol.com>
Source record: 6988

You can only have 1 US callsign at a time. Clubs and repeaters sometimes use a different callsign, but an operator only has one US callsign at a time. Personally, my US callsign is KF4KHC and while I was stationed in Korea with the army, I was HL9HCT because I was operating in another country and was required to obtain a reciprical license. There are also lots of Korean hams who have obtained a US ham callsign too by taking the tests on US military bases there and they use the callsign when they visit the US.

Where did you see a ham with more than 1 callsign?

If you go into an electronic shop and ask for a reasonable power-supply that is suitable for a CB radio they should be able to help you. If not, a 5 - 6 Ampere Regulated power-supply is what you want and if your rig got 10 -20 Watts output I would recommend 6 - 8 Ampere.

yeh i was going to ask that question myself , but i wanted to save it for later. especially in the case of kasupski, who seems to get some kind of cathartic response from telling everyone how smart he is. i guess the multiple call signs are his way of trying to make him feel superior to us old cb types,....icm out.....

Well, yes actually. They are not LAWS, but RULES. Regarding any potential criminality, that would indeed depend on the situation.

One thing is for certain: If you are unfortunate enough to become a 'target', you can count on LOTS of various charges being brought against you. This is done to ensure that before it's all over, you will be found guilty of SOMETHING.

No one walks away scot free. Ever.

I just thought of something else... in some cases, hams could have multiple callsigns because they have upgraded... when they started they got a "tech" callsign, then when they upgraded, they got a "general", etc... callsign. Only 1 is valid though. They could also had a callsign, then applied for a vanity callsign.

By posting mutliple callsigns in your signature, it may just be so others who have contacted you under an old callsign will recognize you.

Okay, what you need to do is turn your radio to the ninth band, put
your mic in between the cheeks of your ass and fart as loud as you
can. This will cure the problem with the other 8 bands...

You don't need to modify to receive.

2558. Re: Antenna on a Jeep HELP

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: emcm@city-net.com
Message-ID: <38142ea7.9166520@news.city-net.com>
Source record: 7007

Tinker,
Firestick just came out with a Jeep specific mount. It goes on the drivers front fender top and protrudes from under the hood. The hard core dirt eatin' Jeep crowd on alt.rec.jeep+willys ng love it.

The second most popular spot on the TJ (97 and above) is where the others here have suggested - the spare mount. There are a lot of Jeepers that have gotten a flat bracket from Radio Shack and mounted it on the top of the tire carrier plate. On pre-97's the rear side external ball mount is the most popular.

Third place is behind one of the spare tire bumper mounts on the tailgate. If you put it there be extra careful to get a good ground.

I put mine (TJ) on an "L" shaped bracket that attaches behing the license plate holder.

Hope this helps...

Ed

The difference here might be the use of a peak-reader versus an
average (RMS) reading Bird. In all of these debates that needs
to be specified.

Test the radio using a powered, peak-reading meter
(will show a peak of 15 to 20 peak watts depending
on the tuning).

Buy a modulator (small, adjustable, Class C) type amp.
With it you'll be able to key at 2 watts and swing to
over 100 on a peak-reading meter and 30+ on an average-
reading (like you're using now) meter.

I was looking through ads on eBay and came across a funky looking Wilson 1000 with tri-star radials integrated onto the brass mast with an adapter for the whip. I was wondering if the radials are beneficial and would work on a Wilson 2000. You can view this weird combo by going to:

http://cgi.ebay.com/aw.cgi/ebayISAPI.dll?ViewItem&item=184261930

Anyone know how they did it? I asked the seller but she knows nothing about the antenna. Shes selling it for someone else. Thanks in advance for any info.

A flat coil is better for wind resistance if it is mounted 'edge
towards the direction of travel.'

Incidently, once a coil is flattened; it is called a "foil."

I use a 444D and a 526T series II (Super Punch). The 526T has become my
favorite mic to talk on over the last 7-8 years of using it.
Please keep in mind I collect mics and own over 50 mics and have used most
mics available including Heil cartridges in quite a few different
applications. You might want to try the "10 DAL" head on the D-104
(sometimes called the sideband head) as it will knock down the background
noise and has a different sound curve than the crystal element.

Why would a birdie always happen on CH 13? Since they are internal
oscillations and they come thru at 2*IF, it seems strange for
this to happen on ALL bands on CH13.

2591. RF Gain/Squelch

Newsgroup: rec.radio.cb

That's Strange... I've had my 3k Classic (3CX1200A7) for nearly seven years and it's still on the same tube at full output. Better yet, my friend who lives across town has had his 3K Classic X (8877) since the eighties with the original tube. You're the first person I have ever seen propose that having a heavy duty power supply is detrimental to amplifier performance. I think perhaps you've been hanging around the poster who once suggeted that hooking up one's coax to a car battery would amplify your signal.

My grandchildren will be using my Henry, quite possibly with the same tube still in place. Can you say that about an Alpha with it's dainty 4-watt grid dissipation tubes????? I think not!!!!

You're not totally hopeless though...I do agree with you about the Collins. The 30S-1 is still to this day a great amplifier.

I've had consistently good luck with the Shure Bro's products. If I had to generalize, I would say that their preamplified microphones do accentuate the higher audio frequencies a little. I currently use a 590T on my mobile with consistently good reports.

> As a sidenote, you can optimize the quality of your tx sound in
> the radio by carefully tuning the carrier generator to the filter
> characteristics and sometimes modifying the audio frequency
> responses of the mic amplifiers in the radio. Then just find a good
> quality communications mic that has the right response for what you
> intend to do with it.

I agree. I did an experiment years ago where I "opened up" the frequency response of a Realistic AM radio. Normally CBs allow about 300Hz to 3kHz of audio bandwidth. Mine was merrily passing 10kHz. Not too surprisingly, it splattered like a mad bastard. Interestingly, the bandwidth was so wide that many SSB, and better AM radios, couldn't "hear" me properly. With that in mind, most radios have an optimized audio passband that shouldn't be messed with. This is especially true of SSB radios where very sharp filtering is used. If you overdrive your mic preamplifier there is a greater liklihood that you'll be unintelligible on *some* radios, and not others. I use a Grant XL and find this radio to have very, very sharp Rx filtering which makes the "overdriven" radios sound very distorted.

Cheers!
Andy

Dave,

As I understand it, the biggest danger to CB linears is base stations, not mobiles. If one blows out his neighbors TV, that neighbor may hire a lawyer. When it gets to court, the judge may bring in the FCC. Based on their testimony, the judge can then render civil damages or ask for a redress if both parties agree. It equally pertains to both HAM and CB stations, under the law there is no distinction, a station is a station subject to FCC R&R.

I have had all the appropriate "in-line" interference filters during my urban ham days, I was covered as far as the FCC was concerned.

FWIW,

Greg

2602. Re: Antenna on a Jeep HELP

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: Greg Miller <greg@millerweb.com>
Message-ID: <v4rQ3.40$_11.5220@nntp1>
Source record: 7051

I have a 95 Country (Cherokee) and I've just this week got back into CB'ng, a strictly practical issue driving 80 miles a day on IS 80. After doing the Radio Shack thing, I returned some and hit a local pro. I loaded up with the K40 1/4 wave antenna (mag mount, smack in the middle of the roof for a good ground plane, about $70), and today purchased the Uniden PC68XL ($114). The results are very impressive. I garage the Jeep and that's a problem for CB, even 1/4 wave. The K40 has a twist quick disconnect that allows me to garage the Jeep and yet get great signal to noise. True, it's a pain to do anything prior to hitting the garage door opener, but it's not that big a deal with this rig.

FWIW,

2604. The Wife loves CB

Newsgroup: rec.radio.cb
Date: 1999-10-23 00:00:00 UTC
From: Greg Miller <greg@millerweb.com>
Message-ID: <OxrQ3.44$_11.5310@nntp1>
Source record: 7053

Hi all,

My wife of 7 years "now" loves CB. Consequently, it was easy to get toys into the vehicles. Now to be honest, she's a tough customer on spending money. There are two reasons why this works. One is the commute on Rt 80. We were unusually in a parking lot situation just two weeks ago for two hours. She said near the end of the delay, "let me ask this rig". She asked, "how long is the delay?", the driver said "3 minutes". Sure enough, 3 minutes later we were moving. I looked at her and said, it's time to get CB in the vehicles. The second reason is that she has an awesome sence of humor and loves to Yak. So she has added "the boys" ("Drivers") to her list.

Another BIG and HUGE reason to buy CB is that our typical 50 minute to 2 hour Interstate commute, based on accidents, sun glare, etc. is that you are dynamically involved. You are just not sitting there pissed off in your box. You know much more detail than radio provides, and you can talk to the rigs and get updates. It's psychologically less stress during the commute if you can talk to others in the same mess, plus it's fun.

I'm a HAM radio operator, and I really think CB ("11 meters") is great. I find that the rigs ("the drivers") are 85% polite and professional. The other 15% are blowing out receivers, playing music, or are just gross beyond normal. Profanity is "normal" in CB and unless you are overly sensitive, it's not only "OK", it's actually amusing. Turn on your AM/FM radio, is "shock jock" talk any worse?

FWIW, comments invited.

I agree with MR. 137 the Alpha V 5/8 MACO Ground Plane is the best choice. Some will disagree. I have owed 10 base antennas and have built a few. And I always go back to the Alpha. It is strong antenna to, It lasted through 3 Hurricanes. The mast bent but the antenna didn't. I do suggest changing the 14 gauge wire on the gamma match to a 10 gauge. and I have used 5000 watts without problems. they are under $80 so it is prices right. Joe Gun antennas are a bit over priced but are just as nice.

Typical ARRL...

Gotta plug amateur radio whenever they can!

I would imagine that she has been exposed to the lovely world of ARRL and amateur already, and prefers to carry on a conversation with people, rather than tell them what kind of radio she is talking on.

If you read the entire post, and not just continued to have some preconceived notion of what you where going to say next, you would have seen that she enjoys talking to the truckers!

Jack,

Then what you are saying is my beam antennas (Moonraker 4, Maco 3 element and M-108) are all wrong?

Because it sure does seem to me that they exhibit a better signal when being RXed on a Dr. Crow double coil then either of my two single coils?

Also, would NEC be wrong?

We have run (as well as a couple other people on the group) antenna modeling that proves the statements that I made.

Not book stuff, actual, practical on the air tests...

I don't live in a book... I live with reality.

I suggest that you learn to do the same.

With it above the load like it is it would work like a capacitence hat, allowing a shorter stinger to be used, this does not do this if you put it below the load.

FOR SALE:

I have the following items for sale:

All are less than 2 years old, look and work like new. Cost new $2915.00.

SGC PS-50 50 Amp Cont Duty Power supply -- $335.00
SGC 500 500 watt amp (cont cvg 1.8-30 Mhz)--$ 935.00
SGC 235 500 watt auto tuner 1.8 - 30 Mhz --$ 935.00

All manuals included. I would like to sell this as a package and will take $2000.00 for the lot, otherwise priced as indicated above.

Terms: Certified check, money order, or cash. You pay the shipping.

No UPS COD, if you want COD, FedEx is ok.

Please reply via e-mail, and don't forget to remove the +nospam+ from my address.

There's a man with a bald head and a wooden leg who gets invited to a Halloween party. He doesn't know what costume to wear to hide his head and his leg, so he writes to a fancy dress company to explain the problem. A few days later he receives a parcel with a note. Dear sir, "Please find enclosed a pirates outfit. the spotted handkerchief will cover your bald head and, with your wooden leg, you will be just right as a pirate." The man thinks this is terrible because they have just emphasized his wooden leg and so he writes a letter of complaint. A week passes and he receives another parcel and a note which says, "Dear Sir, Please find enclosed a monk's habit. The long robe will cover your wooden leg, and with your bald head, you will really look the part. Now the man is really annoyed since they have from emphasizing his wooden leg to emphasizing his bald head and he writes the company another nasty letter of complaint. The next day he receives a small parcel and a note which reads: "Dear Sir, Please find enclosed a bottle of molasses. Pour the molasses over your bald head, stick your wooden leg up your ass, and go as a Carmel apple.

Yes because the rf gain makes your signal come in stronger so you need more squelch to quiet it. Just the opposite when you turn it down

If you're running under 1000w, the A99 will do you fine and is very simple to assemble and put up.If running over that, the I-Max 2000 would again be easy to install.
I have had no luck with Shakespear, have had 3 defects in a row.
The Maco V58 is also a good antenna, but can be a little more intensive to assemble and subject to oxidation lessening performance.

the coil acts like a bunch of stacked loops
and yes they do radiate
it is so little that i tend to ignore it and some times forget it
the radiation resistance is about 1/4 to 1/10 of a ohm
and yes it would be about 20 to 30 db down
but once it hits the ionosphere the polarization is so
scattered that it will be negligible compared to the vertically
polarized signal that the other station will hear
and yes it will make you stronger to other local stations
that use a horizontal antenna but is that not going at it
"bass ackwords" hi hi =:]
it will not tell anybody what the performance of the antenna
is with respect to the primary radiated wave
and no the horizontal beam should not hear a vertical dipole
vary well if you want to radiate a horizontal wave get one of
those HI Q loop and mount it on the vehicle
at least you will get about 2 1/2 watts out with 4 watts in
instead of 0.04 watts out horizontal with 4 watts in
you will work the locals a lot better but it will not make
any difference to the dx if mite even impair dx operation
because a horizontally polarized antenna has a higher
take off angle as compared to the vertical

Depends one what kind of talking you want to do. If you want to get on the air with something that will do the job and not cost not an arm and a leg : the Antron is a good option. If you want to go a little bit better : IMAX 2000. If you really want to give you station the best antenna to work with purchase the Spectrum. It is aluminum, so you have to take proper precautions if you are in a windy area (IE dowling etc). I've had expierence with several base antennas, and this is simply put the best base omni antenna out there right now.

The short of it:

Lowcost option - Antron 99 ($45 - 55)
Medium cost option - IMAX 2000 ($80 - ish)
Bang for the buck - Spectrum 1600 ($110 - hard to find but worth its weight in gold)

Check out the sites online: www.bills2way.com or
http://www.dlcwest.com/~dx.comm/cbbase.htm
They will have prices and be more than willing to work with ya to set ya up.

Good Luck, :)

BREAK!
It has been a while since I have been in the group, so I will get to the point.

I have a 66v that was butchered (iron burns, clips, etc.) the radio works great except the NB will not work, I have noticed that if switched to NB+ the frec counter goes out. the receive is a little "goofy" if turned all the way up in has 20+ dB noise (on a quite night) I usually run it at about "1 o'clock". any suggestions?

It could also be that some people have both a ham callsign (KC2FNG)
and a monitor station registry (KNY2VS), while certain other
self-appointed know-it-alls around here are too stupid to know the
difference between the two.

73 and good DX'ing,
John D. Kasupski
KC2FNG, KNY2VS

Hello Wildcat: Yeah good point, John did it last time. John kind of reminds me of the hams I see when all the radio enthusiasts get together at the coffee shop. There really down on us CB'ers, and unfriendly, snotty, and just a pain to listen to. They usually end up setting by their selves.

Not to mention his snotty and technically incorrect postings. Pity!

The multiple Ham call signs problem that I've heard about, is a little mystifying. One of the 2 meter repeater owners in Los Angles (Roy Turner, of the famous 147.435 Zoo machine) has been contacted by the FCC about having to many Club Ham Call Signs, I believe. The rub is that he has to many call signs, but I cant find in any of the rules where its against the rules to have to many, or a set limit of call signs. Roy is a great guy to talk to, he has QST type (Ham Radio Related) broadcasts on the repeater that talk about all different types of radios and radio subjects. Quit a few people tape these broadcasts, and I love to listen to them. Everything from W.W.I, W.W.II, to present radio stuff, and his a nice flair for talking that makes the broadcast very interesting.

But what is mystifying is that, the FCC is going after Roy for all his club call signs. But the FCC isn't going after the bootleggers, jamers, and others who have violated the FCC rules for years and years, on the repeater. And I am quit sure that a lot of people have contacted the FCC for all these openly identified, bootleggers and jamers.

the hams here are very quite on this one. ive heard of that same case and others. its actually not illegal but a bad show of faith to have more than one call. some hams have been caught with as many as 15 callsigns. one family here in texas, every member had mulitple club calls. its a joke. this is one of the subjects hams will be quite on and hope the thread dies.

Hello Tim: I can't see anything wrong with the guys having all the call signs, they even pay
for them! Maybe the FCC can come up with more call sign base numbers, and sell them.
Yes I've heard of guys having a bunch a call signs, way over 15 of them. But at 15 dollars apiece (I think, or more) I say let em have all the call signs they want. I have a problem remembering my one call sign, let along a bunch of them.

Wonder what the FCC could make to sell CB Handles. Yeah 25 bucks a pop, and you get your CB Handle registered with the FCC, along with a registered number, on a fancy certificate. Have as many as you want. I crack myself up!

Hello all in the group.

I have a radio in the shop for repair and have been told it is dead and no parts available for it any more. What is gone is the microprocessor I am told???
Symptoms: No receive or transmit in any mode
No frequency display at all.

Question 1 - Will the chip switch mode bring it back to life?
Question 2 - are there any parts available for these 2510's

Thanks in advance.

Bob

forget abou the signal engineering antennas. i had one , its too flimsy, the screws wont hold, the fiberglass elements are too thin, the matching system is too weak. i could list much more. i got rid of the lightning 4 and brought a moonraker 4 a much better antenna. if you really want a good antenna I would consider the JO GUNN , its kind of pricy but a very good antenna. or the maco antennas. good well built antennas. If i wanted to spend the money i wold buy the JO GUNN. good luck on your decision. jerry!!!

If the processor is dead, Chipswitch should bring it back to life barring
any other unseen trouble. The original chip for that radio should be
available still but Chipswitch would cost you less.

Really? That is hard to take after I really thought I wanted it. How long ago
did you have one? I know the have been around since the early 80s or something,
and I was told (on the air by some guy who has one) that the antenna
has changed over the years, and the new ones are better. I am leaning
towards the quad antenna - and I think the Signal Engineering antenna
is the only maker of one.

I did hear the spreaders are like 3/8" - I don't like the sound of that!

Thanks for your input!

Bob.

Rick, did you not entirely understand what the man just wrote? His wife likes to talk to local people in the same situation as she is in. If she humorous, like the man says, then she is not going to want to talk to some old stiff necked, crothety old, go by the book, ham. (no offense to the hams out there intended) The main traffic channel is CB channel 19 anyway. I had to travel in Houston traffic and spend an hour or more in traffic just to make a 30 minute commute to work everyday and that CB really made the trip a lot easier. Why would she need 100 watts to talk to the driver next to her anyway. Rick you should have read into what was posted before your --couldn't resist urge-- came on.

Greg, You really do need some sort of communication device in every vehicle you have (unless you have a cell phone) just for the sake of - peace of mind-. A CB comes in extremely handy when the main road turns into a parking lot. If she knows her radios, the man in the red suit will have a good one for you under the tree!
Have a good time with it just the same. And for the sake of sanity.....NEVER BELIEVE EVERYTHING YOU HEAR ON A CB RADIO! Only the important stuff!!!

An individual amateur may only have ONE call at a time,club calls are
something else and there was not a limit but now that some
self-indulgent hams have abused this the FCC is looking at it.Be assured
that hams are a little upset,but it really doesn't bother us too much,no
big deal.If you want to talk about this ad infinitum go ahead.
What is one call of a person claiming to have multiple calls?I would
be happy to find the truth about any calls held.

While I don't believe that profanity should be used on any radio,
there is an FM station in my area, I believe they are 100Kw, that has
a daily talk show called, "Monsters of the Midday", which is so
pathetic and stupid that it more than makes up for the rowday CBers
that inhabit 11-meters.

Why does CB radio talk consistantly bring on bickering about different
radio bands??? How do you know she doesn't already talk on 10-meters
and has her ham license??

A 5watt 11-meter rig is the proper device for talking car-to-car in a
local traffic jam. There is no better alternative for the price.
Just leave it at that...

Then whats the problem,clubs can legally get calls for whatever they think they need one for,JOTA,special events,field day and other contests,etc.,all perfectly legal.A few went hog wild with this and the FCC has dealt with that.
The situations quoted in the thread said INDIVIDUALS,not clubs.

Message-ID: <yDJQ3.965$7M6.78011@news.corecomm.net>
Source record: 7163

The 510Xl is a rather small set. Do you really want to install a Potentiometer in it? Why don't you just drop down your carrier level to where it's best for your radio and leave it there. With a 240 watt amp I would try to get your carrier down around a 1/2 a watt or so, any more then that and you would be driving it to hard that's where distortion comes in. I installed a variable power hook up in my Cobra 25 LTD. It worked great but the only drawback was I was using it in the car and without a watt meter in line it's hard to know what power level you're at. Good luck with it.

Excessive drive is most likely suspect,
although a mismatched antenna system could
also cause similiar damage. Replace the
"pills" and start over.

http://housecall.antivirus.com/housecall/start_pcc.asp

That is a link that will let you download a small virus scan engine, then do all the scanning over the www.... Thereby always having the newest updates to your engine.

It works nicely, and there are very few virus' that this scanner won't detect.

2733. !!!!!!FS: 12 Volt Gel Cell Batteries

Newsgroup: rec.radio.cb
Date: 1999-10-24 00:00:00 UTC
From: K8TJ <tje@usol.com>
Message-ID: <HoYTOAU1097yG=yFylpXxYkJY6yn@4ax.com>
Source record: 7182
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $12
12 volt 7AH --- $13

I have only a few 4's and 6's and about 36 of the 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

try giving it a direct 13.8v from an ext power source car bat ect if it works with that then you have a bad internal supply...if that still don't work somthing driver or finals may be thermal intermitant and need replacing..

By "tested Good" are you testing amp hour capacity?
Every Gel-cell I've measured from the alarm systems has always have SEVERE

amp hour degradation. (I've tested Yuasa, Johnson Controls, and
Panasonic.)

Hello, i bought a Mirage-RCI 2950 from Coppers Electronics and it arrived in perfect factory fresh condition. No...i do not believe that Coppers will do the modification for you, though it is very easy. They sell a video that will show you how to do the mod. The Mirage-RCI 2950 is just a standard Ranger 2950 with the word Mirage stamped on the top, no difference at all. There IS a different type of Mirage 2950 though, it has a slightly different microprocessor that allows it to cover a frequency span of 24mhz thru 30mhz when converted instead of the 26mhz thru 32mhz that a Mirage-RCI 2950 or a standard Ranger 2950 would cover. Its the Mirage MX-2950-EX. They are fairly hard to get, and cost around $300. So long.

Two high school sweethearts who went out
together for four years in high school were both
virgins; they enjoyed losing their virginity to each
other in 10th grade. When they graduated, they
wanted both to go to the same college, but, the
girl was accepted to a college on the East Coast,
and the guy went to a college on the West Coast.
They agreed to be faithful to each other and to
spend anytime they could together.
As time went on, the guy would call the girl and
she would never be home, and when he wrote, she
would take weeks to return the letters. Even when
he e-mailed her, she took days to return his messages .
Finally, she confessed to him that she wanted to
date around. He didn't take this very well and increased
his calls, letters, and e-mails trying to win back her love.
She soon became very annoyed with his persistence and
now with a new boyfriend, she wanted to get him off
her back.
So, what she did is this: she took a Polaroid picture
of her sucking her new boyfriend's dick and sent it to
her old boyfriend with a note reading, "I found a new boyfriend,
leave me alone."
Well, needless to say, this guy was heartbroken, but,
even more, so, he was pissed. So, what he did next was
awesome.
He wrote on the back of the photo the following,
"Dear Mom and Dad, having a great time at college, please
send more money! I'm getting pretty desperate!" and mailed
the picture to her parents.

Northstar's are Chinese JUNK !
I saw something strange the other day. Does anyone in the past remember that "Churning noise" that starts out on Channel 40 & slowly moves lower & eventually goes below CH. 1 ? I heard some kind of a computer noise on a BIG truck the other day that shows up on a couple channels intermittantly that sounds similar but stays on the channel for a while. Which computer makes this noise? It is picked up by different CB's in the same truck. E mail me with ideas @ truth@planetc.com Dave

What?

You can EASILY get more power PEP than you can average.

I have seen single 4CX250B amplifiers that where capable of WELL over 10 Kilowatts output PEP, but didn't do much more than 500 watts average.

If you are going to quote Dennis, I suggest that you continue to quote him on everything he said, and not just what suites you.

It is not hard to get higher Bird readings (average power output) without the corresponding PEP readings.. Most all of the MB8719 chassis radios that I do will do nearly 9 or so watts Bird, but will not do much more than 12watts PEP....

So, that somewhat blows your argument out of the water.

, What were the results
> of the spec analyzer how many db was the 2nd and 3rd harmonic.?
> If i remember correctly #12 said he can make a texas star 2 pill show big
> numbers on a bird meter

Which is fairly easy to do.

Clip the caps going from collector to ground, then remove ONE of the negative feedback resistors.

Key up.

800 watt Texas Star.

Be sure that you can flip the power off to the amp, because half the time the amplifier will not unkey, and will sit in oscillation until it destroys itself.

What size slugs were you using I have yet to see to
> many bird slugs that read identical to each other.

Then you have a bunch of people that like to juggle their slugs!

They are all calibrated in one of about 5 test units at the factory.

Oh bullshit.

Anyone of the people that I know of that goes to the 11 meter breaks have household incomes in excess of 50 thousand dollars a year.

Most are small +++ business owners, or work in highly respected trades.

Your views are the same as an asshole... Everyone has one, and it stinks.

Serves only to promote a myth that helps your bullshit argument, and is completely false.

Sorry you chose to live in a dreamworld, but that ain't the way the rest of the world works.

Now, let's compare price.

6 meter rig.....
11 meter rig

6 meter amplifier
11 meter amplifier

EME station
11 meter beam.

Gee... You can do the same.

Ever wonder why most amateur operators are college grads (4 years +), have 50K or more a year salary by themselves?

Because it is an elitist hobby, that's why.

I run an entire amateur station, and have all the toys to go with it, but seem to have more fun on 11 meters, rather than telling everyone I am running rig X, antenna Y and the weather here is ABC.

Toll Free

Please note: I do not accept unsolicited email or usenet posts from asshole RF police. If you are one of them, don't think that a rebuttal is your right, or that you can reserve that right, as it is not true. The comments reflected in this post are mine, and the majority of the CBers out their. If you disagree with me, keep it to yourself.

That disclaimer makes about as much sense as yours, eh?

If you don't know diddly about radio, go in this order...:

Screwdrivers Experts Guide to CB Radio
Understanding and Repairing CB Radio
ARRL Handbook for the Radio Amateur
Radio Handbook by William "Bill" Orr

If you know something about radio already, skip the Screwdrivers Experts guide.

Hope this helps... With the above listed references, you would know everything to design a radio, antenna system and linear from the ground up, all on paper.

I would not have an answer Phil, but will look again and respond if possible no since in saying I know when I dont, I can tell you this though, with a watergate listening 25 miles out, I notice with two guys tying on the watergate barefooted, one guy can run a two pill doing a little more than 500 bird watts, the other running this 700 watt two pill, the guy running the 700 watt two pill will win every time, swap amps and its just the opposite, this test was done with more than one brand of competition amp running against the hot two pill, it confused me too but the proof was in the pudding.

phil wrote in message ...
>Doc,
>>bird 43, bird 1000 watt load, 900 amp supply@ 19 volts, techtronics spec
>>analyzer. 2 x 2290 @ 15 volts for drive with cobra 29, 8 watts out of

I recently cought a major power surg in my basestation. It is now in the shop being repaired. I have a loaner from a friend. Problem is it came with no mic. I have 2 hand mics. The radio is a Uniden Pro 500 mobile radio on a power supply. The mics are.. Ranger 2950 stock hand mic, TRS Challenger hand mic.

Specs

Uniden Pro 500 is a 4 pin mic plug.

Ranger 2950 mic is a 6 wire mic
Shield, Red, Black, Yellow, Blue, White

TRS Challenger is 4 wire mic
Shield, Black, Red, Purple

Could anyone tell me the wiring for either mic to be used on the Uniden Pro 500

Ranger 2950
Pin1.
Pin2.
Pin3.
Pin4.

TRS Challenger
Pin1.
Pin2.
Pin3.
Pin4.

If anyone can help, I will be so greatfull.

You said "I have seen 2x2879's swing a bird 43 forward to more
than 700 bird watts at only 19 volts." There are plenty of
Bird 43s with peak-reading kits in them; that's why I posted
what I did. You have to specify average of peak when making
claims like that just to avoid confusion. Your later post
where you outlined your test set-up in detail is the proper
way to do it. Over the years, on this newsgroup, there's
been alot of confusion over numbers obtained with different
test set-ups. The more detail you can provide about your
test set-up the more credible your claim becomes.

I am not sure about that reply but will see where this post goes. I am not about to give up my 2510 to one tech that says it is dead and he will hold on to it for parts?? I will do everything in my power to get it back up and running rather than leave it with a tech as a parts radio..... I LOVE my 2510......

> And with class c, get plenty of distortion.

The distortion created by running a zero-bias amp on AM
is nothing compared to the distortion created by over-
modulation. The original author already said that his
radio keys 2 and swings 5. That tells me that the AMC
circuit has been defeated and that the overmodulation
distortion is already there and will be amplified by any
amp he uses regardless of what class the amp is operating
in.

If you want to crusade against distortion on the CB band,
start by trying to convince everyone to restore the modu-
lation limiter circuits in their radios. Once you've
accomplished that, then you can go after non-linear amps.

2782. Re: Whats the deal with multiple Ham call signs?

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: njmedman@aol.comnoemail
Message-ID: <19991024205809.02533.00000750@ng-fr1.aol.com>
Source record: 7230

Hmm.. I really doubt that what you guys are seeing are guys with multiple VALID callsigns. Most likely you are getting confused between individual and club callsigns. An individual can only have 1 US callsign at a time. This is tracked by SSN by the FCC. If they own a repeater, the repeater usually either has their callsign or a callsign of the club that sponsor's it, but that is not their callsign. It is also true that a club may have multiple callsigns for special events, like in Korea, the club I belonged to on base had a special event station everyyear with the boy scouts and the call for that event was HL9BSA. They had another for the club. A club callsign can not be used by an individual if they are not doing something with the club (like a contest or special event station).

And on the issue of "buying" callsigns - there is a "vanity callsign" system in place and I think it costs money, but again, you can only have 1 valid US callsign. Period. Anyone who has more than one must be into more illegal stuff, because they'd have to have more than 1 SSN... regular callsigns don't cost anything. The club you take the test with may charge for materials, but that is a nominal charge at best.

I hope that clears things up, and please, let's not have any more comments about "uneducated" people in the newsgroup just because they are unsure about multiple callsigns. These kind of comments are not productive and typically come from the hams I'd rather not be associated with, plus they give the opinion that all hams think that way, forming a type of discrimnation against us. Thank you.

>

The same antennas are used regardless of amp..generally 1/4 wave antennas which are just basically a straight hollow aluminum shaft about 1-1 1/2 inches in diameter and approx 6 feet tall with a tunable tip which makes up the remaining 2 feet,Go to Toll`s site at BigRadios.com and there are pics of keydown vehicles...i`m getting my scanner hooked up today so if for some reason you can`t access his site I`ll send you a pic of my van with my sticks on it

I hope I did`nt brain my damage.

The FCC's beef is that there are, say, 15 call signs with only one trustee.
That's way too many for one person to supervise--especially when they are
spread out across thousands of miles.

The other aspect is that the FCC is responding to complaints that a few
individuals have sucked up all the good vanity call signs so that these are no
longer available to the general population.

>a hole in the middle of the roof. It will give you the best performance.
>billn6vlr
>

I would not drill any holes unless you know what you are doing. I put a ball mount in the center (almost) of the cab of myf250 and had nothing but problems with my swrs.It may be best to put the mount a little towards the front off the cab say 6to12" especially if you are going to use a topper(cap).I now use a 5 foot fiberglass whip off the mirror and get better results with the swrs then the ball mount.The location is very important and different in each aplicatiion and a few inches may make the difference. Just trying to save you from learning the hard way like i did.

2798. Need Help on Meters

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: jlascottys@mindspring.com
Message-ID: <3813de82.21255082@news.mindspring.com>
Source record: 7246

Hey every one,

I have been reading in on this news group for sometime, just trying to get a feel for the group. I have noticed that there are a lot of well experienced people in this news group and I hope that some one could give me some good advice.

I have just started getting into CB's. I have researched a lot about it though. I am running a Connex 3300 peaked, with a top modulation arround 40-45 watts, along with a small amp at 125. I am transmitting on a Wilson 500 magnet mount anteana.

I am looking to get a set of meters so I can keep an eye on my SWR's and power output. I was conssidering the Paradynam PDC 600. Is this a good set of meters? Are they pretty acurate? I want something that will at least register 1000 watts. I know that I will upgrade to high linears in the future and I want a set of meters that I can use for a long while.

Any other suggests would be helpfull.

I was told that my CB radios were 11 meter radios, but I think I was ripped off... You see, all my CB radios only have 1 meter on them that says: S/RF, except for my Cobra 2000 that has 2 meters. Does this make it a 2 meter radio? I paid for 11 meters, and I only got 1, except the Cobra 2000. Those ham rigs that are 160 meters must have a HUGE front panel to mount all of those 160 meters on to.

Don't get a spectrum analyzer, unless you have lots of money to spend.

Neat toys, but for one ups? Have you PRICED a spectrum analyzer
that works at 50MHz?

You can get a 'tunable' meter. What you're doing is just setting up
the radio for minimum output at 54MHz. If you just put a 'tunable'
filter in line, and then measure the RF on the output, that does the
same thing, for a lot less money. In fact, you could just feed the
output of a 54MHz tunable filter to you O scope and set it that
way.

If you are worried about harmonics, just install or build a lowpass filter.

The spectrum analyser would be the best bet. However, you can use an oscilloscope if the unit has a half decent bandwidth (at least 25MHz). Key up the radio and crank up the sweep speed 'til you get a cycle or two per screen. The harmonics will the the fuzziness of wave form. The fuzzier it is, the more harmonics it has. Many 'scopes have a x10 magnification that'll make this fuzziness (if it is there) easier to see.
Tune your harmonic filter for minimum fuzzies! 8-D

Cheers!

2821. HELP! Cobra 75WXST -- Lots of Reception Static

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: Jay Chlebowski <tijec@primary.net>
Message-ID: <ZF3R3.1988$SU1.181937@news1.primary.net>
Source record: 7269

Howdy All:

Ok, before we begin I'll admit to being new to CB, but not necessarily new to mobile radio installations. I've always had Scanners in my trucks and got tired of simply "listening" to truckers going down the road and decided to start doing some "talking" of my own.

So, I read as much as I could on CB operation, many of the pitfalls and common FAQ, and took the plunge last week. However, I'm really disappointed in the performance and am not sure where to start to look for the problem. I thought I did my homework pretty well.

Anyway, that's why I'm hoping for some clues from you all...

The setup:

Radio: Brand New Cobra 75WXST. I chose this simply because of the small installation and convenient all-in-one design. Cobra also seemed to be pretty reliable as far as the brands go, so I didn't think much about it.

Antenna: Wilson 5-foot Silver Load & Valor "Quick Flip-Down" Mount

Coax: Firestik 18ft with Fire Ring

Mount: Firestik Stake Pocket Mount [mounts in those holes on the top of a pickup truck bed]. It's actually mid-length of the bed and not near cab nor the tail, on the driver's side.

OK...

I reasoned that with a tall truck and 5Ft antenna, secured tightly to the bed [which is mounted with bolts to the frame] I should get pretty decent radiation pattern, and the ground shouldn't be a problem.

I went with the 18ft coax, which barely makes it with all the length in an extended cab, 8ft bed truck, although I didn't like having to solder the pins and terminals on the wire. I figured Firestik would have done that, but no big deal -- I soldered the center pins and center strand of the coax securely.

I ran the power lead directly to the battery, and the ground to a local ground under the dash where a bunch of the dash components were grounded from the factory.

I used an external SWR meter from Radio Shack before I did anything, and tested my SWR. From the factory, the Wilson didn't have to be adjusted. I had an SWR of 1.3 on Channel 1 and an SWR of 1.4 on Channel 40. It was slightly less on Channel 19 or 20.

So, I figured...hot dog! I've got it set up right! =]

Then, I fired it up. Ack! All I can really pick up is a bunch of static! I have to set the Squelch "gate" to around 9DB or so to filter out everything but normal conversations. Even at that level, the signals are _VERY_ distorted to the point that you can't understand anybody really talking.

So I hit the "SoundTracker" button, and that seemed to make the "conversations" even more unintelligible, and didn't really do a thing for the static level. Heck, the scanner picks up the "conversations" and signals better than the CB does. I can understand those fine, and have about a 5mile range with only a 2ft scanner antenna.

Bummer.....

So, I started troubleshooting.

First, I removed the quick disconnect thinking that might be a poor connector between mount & antenna. Nope, still the same.

Then, I tried hooking up the "ground wire" or whatever it's called on the antenna directly to the mount. The Wilson directions note this should only be needed if you've got constantly high SWR, and that it will drop the "resonant frequency," but I thought what the heck. No change.

So, I swapped the antenna to the scanner antenna which is on the other side of the truck and connected via the same mount and same coax. Same results, so that seems to rule out bad coax, mount or ground [the scanner works like a champ].

I'm stumped.

Is this just that poor of a CB? Could the ground still be bad? How come the SoundTracker feature hardly does anything, or is this more of a "gimmick?"

Any suggestions or comments? Am I missing something?

Thanx for the help!

- Jay

Guess I better get back on the porch with my 200MMX
and wimpy cable modem!

BTW, my little 2 pill DID talk on AM to a few places Sunday.
40 CH AM!

If you lamers can't DX from your mobile, give up!

Yes, I did say, "Unit 69, Chesapeake Bay!"

hey xforce , i know for a fact that what you say is barbara streisand and why is it these people who you are referring to , never get on this ng and brag about their stuff, well i think the answer is quite simple , they don't have to, so far i have been on here about a year and all i hear about is xforce this and xforce that , and what do i hear about dave made, nothing and i think i know why, perhaps he does his talking on the, shall we say as you guys refer to it, 'the killing fields'. so to you mr xforce , i have one thing to say , stick a pickle in it and shut up and quit being a party hack for the xforce punks, geez son get yourself a real job and maybe a life. you do know there are things outside of radio don't you , maybe like ooooooohhhhhhhhhhhh, chasing skirt. now that would be a most excellent improvement but perhaps a stretch for you good buddies. anyway, icm out.....

I agree with that. Just a touch of echo on AM. Off for SSB. Be careful,
don't break that plastic mic key!

As a side note, the condenser element has a good bass response which
can overdrive some radios before the voice is loud. That's why I keep
a D-104 handy. Some radios are tinny and the Sadelta works great.

Try putting a Sadelta on a PC-122 some time and attempt to make it
sound good!

I just won an Eagle Sidewinder off of eBay. I've noticed that some of the power mics listed in Coppers catalog for the Eagle Sidewinder 6pin don't require a battery. If I use an Astatic 575 with this radio will I be able to use it without the 9 volt? Also, after reading responses from a past post I'm interested in buying a Shure 527 mic but can't seem to find a store that carries them. Anyone know who sells them? Thanks.

Toll I would certainly hope so perhaps along the lines of say 3-4 times more pep

>
> I have seen single 4CX250B amplifiers that where capable of WELL over 10
> Kilowatts output PEP, but didn't do much more than 500 watts average.

Ok Is it done with voice modulation? How wide is the pulse ? What is the duty Cycle?

>
> If you are going to quote Dennis, I suggest that you continue to quote him
> on everything he said, and not just what suites you.

I am not directly quoting him just said i thought I remember him saying he could show you big watts out of a 2 pill TX Star . If i wanted I guess I could research watt he said exactly, but it would be a waste of my time, because i really don;t care.

>
> It is not hard to get higher Bird readings (average power output) without

>
> So, that somewhat blows your argument out of the water.

That is true for many Cobra 148's some do 20 watts rms, but the peak watts arent there compared to the 8-9 bird out of the 29 and 40-50 wattts pep. Ill bet more people use the radio that creates the highest pep the 29 compared to the 148's higher rms figure in a keydown situation. Toll let me ask you this which do you think would be louder for arguements sake lets use the 2 pill example they both do 1500 watts pep yours hold 700 rms mine holds 500 rms, again the peak values are the same. I am not asking whos puts out the heavier signal but the apparent loudness which of the 2 will be heard or will they both sound equal?

I am sure the way slugs are handled by people they go out of cal, but the
point remains you can order 5- 1000 watt slugs and check them all against
each other and have very different readings, the same goes for the reflect
null of the slug I have seen far to many vary from slug to slug. take care
toll

I know a guy who ordered a Harley , he got it one year later, yes he could
have went down and bought a Honda but he waitied and is tickled pink and
would do it again.

>well if you are lucky and your calls are not ignored you might get it in 3
to 4 weeks.......

I guess selling illegal amps should be real easy to get, sell it to anyone
that wants one, hey maybe a drive up window .....Where ever you guys are
heading dave has already been there, and done that, I remember when he used
to work 16-20 hours every day on this shit like you guys are doing, He has
moved on to bigger and better things you have given him the greatest
compliment already by using his design, and him taking 123 under his wing
and tutoring him has also been a success story for him, remember you can't
be first but you can be next. if it wasnt for 123 coming to davemade you
guys will still be selling the pirate, and Tx Star line.

and what happens when the box
> blows due to user error or a part fails (it happens) and you send it back
to

2850. Re: Power mic battery & Eagle Sidewinder

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: Train <cbmods@mindspring.com>
Message-ID: <7v2rl8$9nf$1@nntp2.atl.mindspring.net>
Source record: 7298

If the mic needs a battery.....the mic needs a battery. You might e-mail advanspec@aol.com about the Shure mic. He was a dealer for them when I bought my 526T from him a few years ago. Tell John Train sent you and he'll treat you right!
He can also set you up with a 575M6 for that thing if that is what you would like for a hand mic

2851. Original SAMS PHOTOFACT CB (#1-#292) Series For Sale

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: Paul <usmc@pcisys.net>
Message-ID: <3814F088.5FE5@pcisys.net>
Source record: 7299

I have for sale a 98% complete set of original SAMS Photofact CB Series manuals from #1 to #292 in excellent condition. Missing numbers are: 108, 152, 208, 212, 216, 221, 225, 230, 236, 244, 259, 264, 270, 271, 273, 274, 281, 284, 286, 289-291.
Price is $750.00 for the set (I will not divide), and I will pay shipping to anywhere in the U.S. Thats less than $2.50 a book (thats less than repro costs), and thats IF you can find them. The price is firm. If interested, I can be contacted at:
usmc@pcisys.net

Thanks

Paul

2852. ECHO MICS...

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: "MIKE (707)" <no4n4x4@hotmail.com>
Message-ID: <L1SQ3.36089$E_1.2043502@typ11.nn.bcandid.com>
Source record: 7300

Echo mics, or any other type of echo-generated signal SUCK !!! Especially on sideband. So, 86 the stupid echo, and get a REAL microphone. I't all about AUDIO. Spend your money on a good D-104, or even a Sadelta microphone. And if you run a REAL sideband base station, the Shure 444 is hard to beat. All that echo and roger beep stuff, only makes your station sound terrible. 'Nuff said... from a 26 year sidebander.

MIKE (707) Just MY opinion, I could be wrong.

2860. FS: Assorted sweep tubes

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <19991025035336.14565.00000694@ng-cr1.aol.com>
Source record: 7308

I am selling 61 assorted sweep tubes (list below).

I recently purchased a garage full of parts from a retired TV & radio repairman. Iï¿½m an audio guy and I donï¿½t use sweep tubes, so Iï¿½d like to sell them off. I was told by the seller that some were new, some were used, but he wasnï¿½t sure which were which, and most werenï¿½t even in their original cartons (some were loose). I have checked all of these tubes on a B&K 667, and have verified that all of the tubes listed below test LIKE NEW, have no grid emission/gas/leakage, and have no shorts. I have also re-boxed the loose tubes. (I rejected any questionable tubes during testing). During my testing, I made some judgements regarding the physical appearance of the tubes. The ï¿½rating systemï¿½ that I used below ranges from ï¿½NEW-VG-GOOD-USEDï¿½. The tubes marked ï¿½USEDï¿½ may have discolored glass or significantly burned getters, but they STILL test ï¿½like newï¿½.

MAKE ME AN OFFER, Iï¿½m a motivated seller!!! Offers to buy the entire lot will be considered first, but I MIGHT consider breaking this lot up.

(FYI, if these tubes were purchased as NOS from that tube-selling place in Arizona, the cost would be over $1600...not that Iï¿½m expecting to actually GET that much.)

Interested buyers, please respond by email.

Regards,
Tom Mitchell

Body handling: HTML body converted to readable text

you really dont know what goes on in the industry......go read a book!

i was referring to the actual amount of people who are still working under daves guidence........and so far it seems that the crew is getting smaller......this would make for a real bad situation "if" orders were to come in......just how long do you think it takes to build ...lets say an 8 pil........or wait cant have one of those without the driver so you need a 3 pill with that..... so if thats all you had for orders for 2 days i guess it would be rather simple to build and have delivered the finished and tested product within 2 weeks time......but is it reality for this to happen when you order through dave made......well if you are lucky and your calls are not ignored you might get it in 3 to 4 weeks.......and what happens when the box blows due to user error or a part fails (it happens) and you send it back to dave........wow another 3 to 4 weeks......dont get mad at dave or anyone who works for him you must have sympathy for them.....it takes time to fill orders when you are understaffed....so please be patient when ordering from dave or get quick results from well you know who.....X
Force!......goooooo team! by the way i am not wearing any underwear under my skirt today.

Screw linears. Just do what seasoned old-timers do...turn up the mic gain on the radio and the mic all the way and scream. Get those meters swingin' y'all ! Intelligibility means nothing...Feedback thru your houses light bulbs is everything ! Impress your friends and neighbors...make your cars brake lights dim and flicker when you modulate ! :)

Well, you are intitled to your opinion. I have a Sadelta ME3 ECHO power mic and the audio is just as clear as the D104 I have. What sounds like shit is when people turn the echo all the way up. The best setting is between 3 and 4 on the echo dial. This way there is just a slight echo accent and you still have that crystal clear audio.

>

Actually there is a BIG difference between ham and CB where interference is concerned. A ham is legally allowed to run a "linear", whereas a CBer is not. If a ham is causing interference, the worst thing that can happen to him is the FCC can impose "quiet hours" if the case is extreme (And that usually only happens when the ham is a hard nose, and refuses to compromise). Usually, if the ham can demonstrate good engineering practice, in the design of his station, and proper filtering and grounding is employed, then there isn't much left to do on his end. The problem is with the receiving device (Which is true the majority of the time). And this is where the pissing contest starts. Who's rights have priority over each other and so on.

The same conditions can be applied to a CBer as well, the difference being that a CBer has to be 100% legal, if he expects to "win" any case. The other thing is that that ham license entitles a ham to the operating privileges granted by the federal government (which supercedes any state or local govt). A CBer has no license, and could be held to an existing local statude such as a "public nuisance" or "disturbing the peace" clause. A ham has a certain "right" to construct and operate a radio station, which can and does help defend against any civil charges.

I know a local CBer that was taken to court over his CB interference, and was found guilty of "disturbing the peace" and had to pay a fine of $300. The neighbor had tape recordings of the interference, and it didn't help that the CBer was heard swearing on the tape.

One could say that he didn't have a good lawyer. But could you justify paying lawyer's fees to fight a $300 fine? Other than for the principle, it doesn't make financial sense.

To your original point, it is much safer for a CBer to run power from the mobile. That way you never interfere with the same people for very long.

> 2510......
>

I agree. Many unscrupulous "techs" will tell you that a particular radio
is "fried", and then offer to "take it off your hands", as a courtesy.
The real deal is usually a simple fix (like a bad voltage regulator),
and the "tech" will fix it later and will either add the "parts rig" to
his personal collection, or sell it for a big profit, since the 2510's
are scarce, and many people want them.

I'll bet that the micro is not bad on the radio, and the real fix is
something much simpler.

2890. Re: Whats the deal with multiple Ham call signs?

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7v1p9p$l0g$1@holly.prod.itd.earthlink.net>
Source record: 7338

Well...

Your license is a STATION license, with OPERATOR privlidges.

You can still technically apply for multiple licenses for multiple locations, although if you do that, the FCC frowns on that. The problem was the FCC 'technically' allows individuals to file for all kinds of groups and club licenses. What happend was when the database was checked, they found individuals with many more than they could ever use. One guy had 23 separate calls! The FCC has started procedures against the individual to revoke all the extras.

But that's just the extreme. I did a check of licenses in my area, and found "The xxxxx Family Radio Club" for one individual near me, and his 'good buddy' just had to follow suit and got a license for the name of his street. Will that pass FCC muster? Probably, as it is just one extra license.

One issue here is that like I said, a HAM license is a STATION license. If there are multiple HAMs in a household, LEGALLY there is still only one single call for the house. It's the STATION. But there is always a way around that. Like if I'm in a friends car, I LEGALLY have to sign with his call sign. The ONLY time I legally can use my sign is if I am a higher class license than him, and if I am CURRENTLY operating in an area where my privlidges are valid and his aren't, then I have to sign both. But realistically would I sign his call or my call on 2M for example? Well, if I 'borrow' his car, aren't I also 'borrowing' his equipment? Isn't that technically making the station 'mine' for accountabilty?

So it's not all cut and dried. And yes, there are lid HAMs who abuse the system. Some more than others. But I wouldn't call having a 'second' call for a make believe club fraudlent or abuse, just a little bit of immaturity and taking advantage of the letter of the law kind of thing.

Mike

Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.cb,rec.radio.shortwave

Trade even up: Viking Valiant 1 for Hallicrafters SR-150 or 400 with power supply/speaker, in like condition.

Freshly tubed, solid state modules in place of 846's. Front panel is exceptionally
nice; nearly mint. A few scratches and minor knicks on the upper lip.
Only draw back, someone widened out the right hand manual/ptt
switch hole. An on/off flange hides the flaw nicely. All knobs and inserts
intact and like new. Crystal knob cover is there. Lettering perfect. VFO
is beautiful.
The maroon cabinet has been painted, not a perfect job, but not bad.
Has a transmit-receive relay built in.

Let me know what you have!

Regards,

Cary Fries

2906. Re: midland 79-290

Newsgroup: rec.radio.cb
Date: 1999-10-25 00:00:00 UTC
From: Robert Moore <rgmoore@swbell.net>
Message-ID: <38150A09.31D8BD76@swbell.net>
Source record: 7354

I relatively new to CB but I'll give you my two cents. I bought a 79-290 to replace my Cobra 148 GTL (it's going in the house as a makeshift base). I've had it about 1 week now. Pluses are the mod was really clean and easy. Short two pads and pickup 200 freeband channels and 10 meter. The radio has a good number of features. SSB tunes easily with the coarse and fine clarifier controls. I'm driving a linear, so I don't know what the dual finals peak at. Freq counter works across the board, dual watch works well. Things to be aware of:
1. I believe Midland's site and Bill's 2 way state the radio has rf gain control. This is not entirely true. There is the LOC/DX switch and that is all.
2. Channel selector works kinda squirrelly. Twisting pressure applied to knob will change the channel prior to it clicking. Thus quite often, when you turn the knob one click you change channels twice. I've heard of an export version of this radio which uses up/down buttons instead of a rotating selector, this might be a symptom of that option internally.
3. 10 meter or 240 expanded mode are selected by holding buttons during power up. You lose all memory presets when switching from one mode to another.
4. Comparing the rx quality from the Cobra to Midland, I am a bit disappointed in the recieve. It is somewhat noisy. However, I installed this radio coincidental to the increase sunspot activity ~1 week ago. This accounts for some of the noise. I haven't run my Cobra since I need to fire it up and compare the two side by side. I'll reserve judgement until then.

Overrall, I'm pretty happy with the radio considering features vs. price. I'll run this one until I can get the President Lincoln. I have documentation for all the mods. Let me know if you need any info. But I recommend ordering from Bill's 2 way and he supplies the mod info with the radio. Run your power lead all the way to the (fused at) battery to minimize engine noise.

> What?
>
> You can EASILY get more power PEP than you can average.

Toll I would certainly hope so perhaps along the lines of say 3-4 times more pep

>>>>But, that is not what was being talked about before...

>>>What was being talked about before was having the PEP value to back up the claim of 700 watts Bird.... And that wasn't there... The 2 pill wasn't doing anywhere near 2100 watts PEP.

>>>My statement was to say that you don't <<necessarily>> have to have the PEP / AVG relationship textbook correct to have the claims be true.

>
> I have seen single 4CX250B amplifiers that where capable of WELL over 10
> Kilowatts output PEP, but didn't do much more than 500 watts average.

Ok Is it done with voice modulation? How wide is the pulse ? What is the duty Cycle?

>>>Yes, it can be done with voice modulation. You use a switching power supply (I know you guys know about those) and pulse the grid / screen and anode of the tube. This keeps the total average power down, but will still allow for higher than normally capable output powers.

>>>The downside is that you must use a Hi-Q tank circuit so the flywheel effect will have enough to complete the sinewave. Hi-Q translates into expensive.

>
> If you are going to quote Dennis, I suggest that you continue to quote him
> on everything he said, and not just what suites you.

I am not directly quoting him just said i thought I remember him saying he could show you big watts out of a 2 pill TX Star . If i wanted I guess I could research watt he said exactly, but it would be a waste of my time, because i really don;t care.

>>>>What he said exactly is what I stated above, and what has been commonly known in the CB tech circles for quite a while.

>>>The other "trick" was to put 2879s into MRF 455 amps and not change the turns ratio or caps on the output.

>>>This would make a nice 800 watt PEP amplifier.

>>>Lasted about as long as you would with Christy Brinkley! ;-) But, it would get the customer to love you. The unscrupulous techs could always blame the unstable amps failure on the user, then charge them again to mod the amp back to stock!

>
> It is not hard to get higher Bird readings (average power output) without
> the corresponding PEP readings.. Most all of the MB8719 chassis radios that
> I do will do nearly 9 or so watts Bird, but will not do much more than
> 12watts PEP....
>
> So, that somewhat blows your argument out of the water.

That is true for many Cobra 148's some do 20 watts rms, but the peak watts arent there compared to the 8-9 bird out of the 29 and 40-50 wattts pep.

>>>No, there not. That is exactly what I said.

Ill bet more people use the radio that creates the highest pep the 29 compared to the 148's higher rms figure in a keydown situation.

>>>Down in the south, that is starting to change. People have been listening, and the 148 is starting to make a comeback.

>>>If they just went for the highest output on the Dosy, then EVERYONE would run a galaxy with a pair of 497s in it... That would give you 100 or so watts PEP output!

Toll let me ask you this which do you think would be louder for arguements sake lets use the 2 pill example they both do 1500 watts pep yours hold 700 rms mine holds 500 rms,

>>>Simple. You have not provided enough information to base this on.

>>>You would also have to know the carrier values involved, as the "loudness" of an AM transmitter is based upon the difference in carrier to modulated power output.

>>>If you took your and keyed it at 700 watts, and backswung to 500, but where doing 1500 PEP, you would have 800 watts of modulation.

>>>However, if you ran a station like me, and had the carrier near the 300 watt level, you would have 1200 watts of moduation.

>>>Which one is louder now?

>>>Now, back yours down to 100 watts of carrier, forward swinging to 500, and it would be a toss-up, although I would put my money on the 300 swinging to 700, as the AVG power shift is the same, the PEP is the same, but the TOTAL aggregate power is higher on the 700 watt signal.

>>>If you don't believe that, ask Chill next time you are on the phone with him how my Suburban sounds... Or #6 in your neck of the woods.

again the peak values are the same. I am not asking whos puts out the heavier signal but the apparent loudness which of the 2 will be heard or will they both sound equal?

>>>See above.

>

I am sure the way slugs are handled by people they go out of cal, but the point remains you can order 5- 1000 watt slugs and check them all against each other and have very different readings, the same goes for the reflect null of the slug I have seen far to many vary from slug to slug. take care toll

Yes, you are right, but the tolerance is still there... +/- 10%.

You too, CM..

Jeff,

Its sounds like either the modulation section is blown or your mic is bad. Maybe a bad wire in the mic wiring, or internally in the radio. Check for cold solder joints in the radio, and also do a continuity check of the mic wiring with a multimeter. If known of this works find a known good mic, and test it that way. If the is a Mic gain, or dynamic Crank it Up. Make sure its working. also if its got these type adjustments check to see if there is a dirty Potentiometer. I know I speeled that wrong!

And if all else fails try a technician in your local area. If there nothing wrong he shouldn't charge.

Good luck

I agree with what Robert said. It is a good radio but has some quarks.
I have been running one for about a year and have been pleased with it.
One thing to look for is I hit the face release button by accident when
the unit was on and the brain went berserk. (It is to close to the band
select button) In about 2 days it started to change channels by it self
and lose the memory. If you remove the face plate and look at the back
you will see rows of contacts. 2 of them say "short if errors exist"
or something like that. I did just that and all has been well. I also
agree with using Bills. I have had good luck with them and they sent
the mod sheets along with it.

There's a big gap between the "Screwdriver Expert's Guide" and
"Understanding and Repairing CB Radios." If you're at that level
I recommend the CB Tricks series too. Even the Thomas Publishing
books can be useful at that level. Don't underestimate the value
of the beginner books; they form the foundation for you interest
in high performance CB.

well gee golly, i'm suprised all those foul mouths on 14313 would let you talk on there band. whats wrong with 40? are the the short wave stations hurting your ear? i was right here on 11 working europe and africa with a cheap radio and a antron 99 making real friends not just meaningless bullshit like the hams. try listening on 26285 usb or 27555 usb in the mornings and afternoons. youll hear so many different countires it may make you want to give up those old ham bands. i have 112 countries confirmed, sinlge mode, single band right here on 11 meter ssb and all thats qrp with the confirmations direct from the country and not via beuros or qsl managers(that was last cycle). the idea that real dxing cant be done on 11 is a joke. hams are always being heard praising the great dx on 10 meters but 11 opens early and closes later with stronger signals than 10.

>
> I have.
>
> It don't hold a candle to the _average_ traffic on 20
>meters--and that's not just limited to mornings and afternoons.

thats right. we dont have a contest or net thats occupying every other freq

>>i have 112 countries confirmed, sinlge mode, single band right
>>here on 11 meter ssb and all thats qrp with the confirmations direct from

>the
>>country and not via beuros or qsl managers(that was last cycle).
>
> I thought you just said you run an amp.
>
> qrp is 5 Watts and below. Are you _sure_ that's what you meant?

no where in my earlier post did i say anything about a amp. i use a hr2510 at
25 watts and a antron 99. learn to read better before making dumb ass comments

>>the idea that real dxing cant be done on 11 is a joke. hams are always being
>heard praising
>>the great dx on 10 meters but 11 opens early and closes later with stronger
>>signals than 10.
>
> Of course it does. The lower the frequency the greater the dx
>opportunities. That's why most hams use 20 meters for dx instead of 10
>meters which is only good during the peak of the cycles.

guess what? right now we happen to be in or near that peak and the world wide
openings on 11 meters are fantastic everyday.

> I just checked the current status on a dx packet cluster and
>there are currently 6 active dx stations on 20 meters that have been
>reported in the last 15 minutes. It is now 0224 UTC (10:24 EST). That
>counts _only_ stations outside the US. Want to count the ones on 11
>meters right now?

even though its not widely used go check out http://www.wwdx.com/cluster and it
has some good spots. as we get more organized on the net it will pick up.

> Seriously, I have no problem with freebanders at all. Those of
>you who operate clean freeband stations (and who don't use the bottom
>end of 10 meters, as some do) are bothering no one and if you choose to
>violate the rules a bit in doing so, it isn't any of my business.
>

the freebands are what ham radio was supposed to be. its not a collection of
rich old geezer wanting everything to stay the same. your just as likely to run
across a kid in brazil as a business man in russia on 11. the ham bands arent
like the old days. theres no new life because nobody is friendly and no new
comers are welcome to the well established clicks.

> On the other hand, my original response wasn't to a freebander's
>post but to one by a CB'er who was bragging about his _power_. That
>_does_ violate the rights of others (the CB'ers who are jammed or
>overpowered by his signal and can't enjoy equal use of the frequencies).
>There's a world of difference between a clean freeband station and a
>"MOD-U-LA-TION" CB'er whose only goal is to show off how much power he
>can pump out from their amps or how obnoxious they can be.
>
> Rick

you can say what you want about the dummies and there dirty linears here on 11 but i can say the same about the super big stations i hear booming in on 80 and 160 at nights and all the others during the day. whether you like it or admitt it or not people are breaking the laws and acting like asses on all the bands. i wont even get into all the problems vhf has had with bad operators.

ps yes i still have 112 countries on 11 meters with qsl's direct from the countires to prove it. 25 watts and a simple vertical. not even a amplified mike to help and i even know code but i have no desire to be a ham. i'm afraid i might get that hollier than though shitty ass attitude you and others have. follow the links on my signature and find out a little of what truely goes on before you open your mouth.

WHO PRECUTS YOUR HEATSINK?
HOW MUCH DO YOU PAY?
THERE IS MORE TO IT THAN CUTTING AND SOLDERING PARTS ON A BOARD. AND IF YOU ARE BUSY WITH MANY ORDERS THERE IS NO TIME TO PREP FOR THE WORKLOAD. IT IS NICE TO HAVE SOME FREETIME TO PREP BUT BY THE TIME YOU PRESS 200 TRANSFORMERS THEY ARE GONE OR NEED TO BE USED RIGHT AWAY.

I am not sure if you have any experience in building mass amounts of competition boxes but it takes time and a little bit of skill. Maybe one day you will find out exactly how long it takes to build from scratch.

>Got a 5-pill in 4 days

happy for you

> Grab a solder iron and fix it

not all users of amplifiers have the knowledge or even know where to begin when a problem occurs with the amp they are useing. so dont give me this kinda lame ass remark.

> Yeah its easy to have quick service when you got 50 amps sitting there on
>the
>shelf cause you`re only selling 3 a week

3 a week thats a good one.
50 on the shelf?
cant even get them on the shelf.
they go right from the test bench to the shipping dept then boxed labled and shipped. Another one with assumptions i see.

I used to have a little box for checking this. You adjusted it for full scale reading. Then threw a switch to measure the second harmonic energy. It was set up for CB band. A friend who was a retired engineer for GE gave me the plans and it was real easy to build, unfortunately I no longer have the box or the plans.

you probably dont want weather. its pretty useless. cobra or uniden is the way to go for sure. you might want to just go right into a 148GTL or a uniden GrantXL. they both have A.M. and SSB(single sideband). sideband is kind of a nice thing to have. you can talk i little farther on sideband. especially when its quiet. with the 148 or the grant the only thing to really upgrade is the antenna. you can also do some pretty cool modifications to either radio. like channel expansions and power and modulation increases. i think you would be pretty happy with either 73's!!!..937--snowman---chicago

Er...Rick...an Antron 99 is an antenna, not an amp. It's a 1/2-wave vertical collinear array that covers 10, 11, and 12 meters without a tuner. Made by Solarcon. Cost about $40, or $70 if you order it with the radial kit.

wrote:

>my 2510 is doing 25 watts. thats too much power? please remember i'm just using
>a half wave vertical

Ummm...yeah, it is. The maximum legal limit on CB is 4 watts AM or 12
watts PEP sideband. Furthermore, the 2510 is a ham rig modified to
work in the CB band, is not type-accepted for CB use, and is therefore
illegal to operate in the CB band.

>try listening on 26285 usb or 27555 usb in the mornings and afternoons.

Didn't you just tell Rick to learn how to read? I suggest you do the
same...learn to read Part 95, where you'll learn it is illegal for you
to operate on those frequencies, or for that matter, anywhere else
except the 40 frequencies or channels specified in Part 95.

>the freebands are what ham radio was supposed to be. its not a collection of

A bunch of unlicensed, undisciplined morons operating illegal
equipment on unauthorized frequencies? No, that's not at all what ham
radio is or ever was about. Try again.

>ps yes i still have 112 countries on 11 meters with qsl's direct from the
>countires to prove it.

Yeah, and every single one of them is illegal under Part 95...so are
we supposed to be impressed by your ability to ignore the regulations,
or your stupidity in publicly flaunting the fact that you do so, or
both? Either way, I'm not the slightest bit impressed.

the scanner has lower sensitivity and you do not hear the nose level
and some scanner atomically lower sensitivity when a band is extremely nosey
so you will not hear the general back ground noise
so the people you hear in the noise on the cb you will not even hear on
the scanner so just crank up the squelch till only the strong and readable
ones come in
and if some one near by is still extremely distorted then get a used cb
some place or barrow one off of a friend
or go to a cb store and ask if they could drag an old used one out to the
truck to see how it works and and if one of the above works fine then
go to the place you got the cobra and tell them you want the defective junk
replaced
some times stuff comes out of the box bad

On the Channel changing of the 79-290 Midland. The selection works on pulses instead of the traditional Channel Selector you might find in the less technically advanced radio such as the cobra and uniden. This accounts for the delay in the channel changing taking two turns to get it. It is an off/on pulse switch. Hope that clears that up. It is not a radio defect. The Northstar radio's work in a similar way.

Subject: The FCC has spoken

Well I finally got a reply form the FCC they are looking into illegal operation on 10 and 11 meter.

>>>Gee, guess you are too stupid to realize that you got a form letter, eh?

>>>People all the time are getting a response from them.... Guess that means that Clinton WILL be impeached, too, eh?

As some of you know I have been collecting email address replies to emails and URLs of sites and people who either sell illegal amps and or illegal mods for cb radios.

>>>Great. So, you are like the traffic cop that got beat up as a child. You sit aimlessly and snitch on other people.

>>>I hope that your children are treated the same way, as are you.

I have tried to tell you that the FCC is going start enforcing the rules on 11 meters as well as the ham bands but all I have gotten is insults and flames so the time is coming

>>>Yeah!!! Your such a man! You have become a successful snitch... Bitch... Well, those are one in the same, ya know!

I suggest if I emailed you about illegal info or illegal equipment you were selling that you straighten up quickly because as soon as I can get this information in a neat form I'm sending it to the FCC.

>>>Go ahead and send them my name. You will notice that I don't sell a goddamned thing, and you will quickly be made a fool of because you are now taking this personal.

>>>Would you like my call sign, as well?

>>>Also, I notice that you don't reply to your email.

>>>Your nothing but an asshole. Beat up on the airwaves, got your lunch money stolen from you, wife hates you, sleepin with a trucker asshole.

Go climb back in your little hovel and quit whining, because nobody here cares.

Toll Free
I said that.
I don't sell linears
Somehow you have me confused with someone who actually gives a flying fuck about you, your insignificant little lift, and your personal vendetta against CB radio.

Ya little Crack!

Hi. Yes, I'd like to have the e mail addresses. We are looking at this
whole
problem. thanks

>>> "Rick Bullon" <kc5ajx@unicomp.net> 10/18 8:14 PM >>>
Hello
I 'm sure than someone else than Mr Hollingsworth is reading this and I
thank you for taking time out of you busy schedule.
I read in the ARRL newsletter Vol 18 Number 37 dated Sept 17 1999
that Mr hollingsworth while addressing a forum at the Shelby Hamfest in N C
stated that the next area that the FCC is going to try to clean up is
illegal CBers on Ten meters.
I have started tracking down a few sites on the internet that post illegal
mods and /or sell linear amps. I have emailed a few stating that the info or
items on their site was illegal and that the FCC was looking into illegal
ops and amps on ten and the internet.
Well as you can guess the replies (of the few I received) ranged from KISS
MY A**!! to "the information on my site is for informative purposes only and
should not be used to violate FCC regulations"
My question is .... Is the FCC interested in websites that promote
modifying CB radios for 10 meter operation and/or sites that sell amps for
10/11 meters? Also is disclaimer these guys are using legal or just a smoke
screen??
I still have copies of the the email replies I received if your office is
interested in that can of info
If I can do anything to provide leads or any orther info to your office
please let me know. Also if I'm being a pain let me know that too HI HI

How can you talk about dobbing people in for illegal communications and programs when you yourself might be involved in illegal and/or stolen programs or cracks for programs that you might or might not have borrowed. Oh and if anyone is thinking of sending Mr dobber a hacked program or virus, be aware he also seems to be good at firewalls.

Today is a great day for a new start. You may look as though you're wearing a halo, and you may feel angelic. Enjoy the feeling of having the world in the palm of your hand. Just remember where you shit. Others will remember were you don't, and in the end if you have been shiting in someone else's woods then carma will eventually get you.
Freedom of speech is something that a lot of people take for granted. Use it carefully and love they neighbour. Don't be a greedy person and keep all that knowledge to yourself.

The TRC 448 was an oddball of a radio. If I remember right (I had one years ago), there is an 8 pin mic preamp IC that was prone to failure, and difficult to find a replacement for. I had to "adapt" a standard op amp, and make some circuit changes to get mine working again.

If you can determine that the mike itslf, is not bad, then I'd say chances are good that the mic preamp IC is bad....

>From my experiences, that Sadelta mike just does not sound good, even with the echo off. The problem is that the mic itself is too "bassy", and makes the operator "muffled" sounding. There have been some brave experimenters that have made some "modifications", to change the audio response, and can get them to sound decent. But out of the box, they just don't seem to mate well with most radios.

I usually agree after one caveat. If you talk to them and explain the error of their ways and they understand and accept your advice and make the necessary changes to sound acceptable, then they can be saved. If they get all defensive, and blast you with filthy language (Most of which will be unintellegeble due to the over-echo), and a barrage of noise toys, then they solidly fall into the "idiot" catergory.

This is so pathetic. Another GI JOE wanna-be that thinks he received a Superman cape with his Ham license. You should listen to the QSO's up around where I live. These guys are actually standing in line, making pests out of themselves at out State police headquarters because they want to be the ones who single handedly rid the country of this nasty CB plague.

When you ask each of them what they are personally doing about stopping kids from getting their hands on illegal drugs, the airwaves become silent.....

I called a local repair\dealer out my way and asked about the 9001. He said the same as other poster that the radio is pretty much the same as the 5010. With the exception of the finals being readily available. He also mentioned that the 9001 has superior rf shielding for the cpu which apparently the 2950 lacks. His opinion is that the 9001 is a better built radio than the 2510,2950,lincoln. No doubt some will dis agree, but this is "his" opinion from his experience from the repair side of things.

2 men are in a Dr.'s office. Each of them are to get a vasectomy.. The nurse comes into the room & tells both men "Strip & put on these gowns before going in to see the Dr. to have your procedures done." A few minutes later she returns & reaches into one mans gown & proceeds to fondle & ultimately begins to masturbate him. Shockedf as he was, he asks, "Why are you doing that?" To which she replies "We have to vacate the sperm from your system to have a clean procedure." The man not wanting to be a problem & enjoying it, allows her to complete her task. After she is through, she proceeds to the next man, but then drops to her knees & proceeds to give him oral sex. The first man seeing this, quickly responds, "Hey! Why is it that I get masturbated & he gets a blowjob?" The nurse simply replies, "That is the difference between an HMO & Complete Coverage.

2961. 148 GTL: Worth Fixing?

Newsgroup: rec.radio.cb
Date: 1999-10-26 00:00:00 UTC
From: r8500@aol.com
Message-ID: <19991026092434.23625.00001973@ng-ch1.aol.com>
Source record: 7410

OK, here's the situation: I have a stock Malaysian made 148 GTL which I purchased new about two years ago for $175.00. The radio has been used very little since I bought it, and was just aligned yesterday. However, recently my 148 GTL was dropped on its faceplate from a height of about 4 feet (ouch!), which resulted in the knob shafts for the dynamike control and the volume/squelch control being bent to the point where these controls are almost unusable. My question is: would it be worth the money to have the knob shafts on my 148 replaced, or would I be better off buying a new radio like a Grant XL or a PC 122? It's been a long time since I've had a radio serviced, so I don't have a real good idea of what the average rate for labor is these days, although most shops on the net seem to charge about $45/hour for SSB radio repair plus parts cost.
Any help/advice would be greatly appreciated.

Thanks and 73,
David

the grant xl is the same radio as your 148. the 122 is good to but harder to add extra channels.

MIke,
I take exception. The person who is the control operator must sign.
That means that if you're borrowing the radio/car/station and you are the
control operator (ie, the owner of the equipment is not around) then you must
sign. You may LEGALLY sign with only your own call, or you may PROPERLY sign
with owner's sign, a slash/break and then your own call. The first method
satisfies legal requirements concerning operator identification. The second
method will protect you if you are accused of operating with excessive
spurious radiations at such and such time, you can point out that you were
operating the station at that time, but that it was not your equipment, and
that you had no reason to believe it was "dirty." Not much of a defense, but
the FCC may look more kindly on you. By the way, little room for argument
here, it's a test question on the Advanced exam.

>So it's not all cut and dried. And yes, there are lid HAMs who abuse
>the system. Some more than others. But I wouldn't call having a
>'second' call for a make believe club fraudlent or abuse, just a
>little bit of immaturity and taking advantage of the letter of the law
>kind of thing.

Actually, unless there is a valid club or special event station, I see
it as being abuse. There are few enough calls to go around, we don't need one
person using multiple calls. In this region, you're stuck with a 2x3 call
until you hit Advanced class, and even then the Extras are all 2x2 instead of
1x2 or 2x1 calls. It doesn't help when someone is holding multiple calls of
ANY licence class...

Hmm, the TRC-448 was the 'different' radio in the RS lineup. All the
others were Uniden uPD858 based. That one was I thing GRE and
I forget the PLL number. But the common element here is no audio
from the mic. Didn't that rig have a PA function? Plug a speaker into
the PA jack and troubleshoot it strictly as an audio problem first.

If that works, then you'll have to move on the troubleshooting it
as an AM rig next.

But I'll lay odds one of the low level audio amps blew. Next choice
would be in the AGC/limiter for the mic gain.

i don't see how the fcc can restrict / control content on the net as there is a
first amendment right to free speech issue here, disclaimer or not.
the fcc can control my activities on the airwaves but not what or how i talk as
this is out of their jurisdiction.
this is why you can openly buy books on the subject of radio mods on the net or
in book stores. first amendment rules applies.

From: pllo2a@aol.com
Message-ID: <19991026105736.12814.00001139@ng-cd1.aol.com>
Source record: 7420

>As some of you know I have been collecting email address replies to
>emails and URLs of sites and people who either sell illegal amps and or
>illegal mods for cb radios.
>

to fill your cigar box? the fcc CAN'T do anything about speech content here as
the first amendment would surely stand in it's way.
the only thing the fcc can control is hardware issues so you can stop trying to
scare people with your smoke and mirrors.
>
> I have tried to tell you that the FCC is going start enforcing the rules on
>11 meters as well as the ham bands but all I have gotten is insults and
>flames so the time is coming
>

it might be your delivery. if you reported equipment suppliers instead of
speech content, you would probably have more credibility with them.

>I suggest if I emailed you about illegal info or illegal equipment you were
>selling that you straighten up quickly because as soon as I can get this
>information in a neat form I'm sending it to the FCC.

and they'll round file most of it because they know they can't act on speech
content here.
>Go climb back in your little hovel and quit whining, because nobody here
>cares.
>

here or the fcc.
this is not aimed at you, toll. it's to the guy you responded to.
jeff

next to the audio output transformer, there should be a black diode. this is
called an anti-spiking diode.
if it's blown, it cuts audio to the transformer.
check it with an ohm meter. if it's open, replace it observing proper polarity.
good luck.
jeff

I have a question about his radio. When I switch to FM on any band the radio goes quiet for a second or two then seems to revert to AM mode with the FM indicator. I don't know that much about FM. I this radio functioning on FM? How can I tell? Is there any other mod for FM other than the channel expo? Thanks in advance for any assistance.
Rob

Take a look at what this guy thinks he is. He is a tech plus like me, which means he only took the 5 wpm code test. Yet he is using cw abbreviations, ie:HI HI and 73, which are only appropriate on CW. This guy is even a ham wanna be. You would think a real ham who looks for DX on 15 meters would be doing what he is doing. No, a real ham would not waste his time like Rick does. Don't get me wrong; I am not a real ham.

Rick Bullon dribbled:

> Also if I'm being a pain let me know that too HI HI
> 73
> Rick Bullon
> KC5AJX

And since Rick does not have privileges on the HF bands, you can see him at hamfests with his name and callsign on his baseball cap. He has his two meter handheld on his belt, and a speaker mic attached on his lapel. Rubber ducky commando. He meets his buddies on the repeater and all they talk about is what pizza place that they will meet at. They also tell each other that they are full quieting into the repeater. While they eat their pizza in the restaurant, they all have their handy talkies sitting on the table listening to the repeater. With their faces stuffed with pizza and their fat bellies pushed up against the table, they talk about the low life cb'ers and how they are gonna clean them up, when they themselves are no better. They have no technical knowledge. Oh, they can change a battery pack on the Icom, or maybe install a mag mount on the car. Some even have an SWR meter. Yes, I have a tech plus license like Rick. I have been to the pizza place with the dorks like Rick. But I quickly learned after doing what they do, I am not like them. I have a life and they don't. Yes, I know people just like Rick, and I pity them. When you put this mental picture of him in your mind, you will pity him also. Do you think Riley Hollingsworth would hang out with Rick? LOL. I'll have more on this later...

You are correct, the control operator MUST sign. But the STATION
license is REQUIRED. Now, if you visit a friend, then you can always
say you 'borrowed' his station, and sign with your OWN station
license. And there is no requirement to log it as such anymore. But
my understanding is that excluding you 'borrowing' his station, the
station license is the station license. There is nothing that prevents
you from signing both, but the station license MUST be signed.

And the only time BOTH calls are REQUIRED, is that if you, as control
operator, operate in an area where the privlidges granted to the
default operator of the station license are exceded.

Just because you use someones station does not change the station
license. You can still be control operator without changing station
license.

I don't really see us as in disagreement, just that your method of
identification 'assumes' the borrowed station. And in you're scenario,

with the owner 'not around', they technically you'd better be
'borrowing' the equipement, otherwise it's an unauthorized
transmission if you didn't have standing permission to use
his equipment. Then it could be argued as a grey area if a violation
occured, and the owner, just to cover his butt, would have to say it
was 'unauthorized' or the equipment was 'borrowed'.

Back in the early 70's, when all equipment in and out of a station would
be logged as in and out of service, this was readily apparant, as you,
with 'your' call, would have to 'log' the station equipment you were
'borrowing'. Otherwise, you flat out were in violation. In addition,
if
you were to operate your friends station as a guest control operator,
you would enter it as such in the log. HIS log. You could also enter
it in yours, but I don't believe it would have been required there.

If you think about it under the 'old' terms of logging station
equipment,
then the methodology of keeping track of what is 'required' becomes
clear. Even though you don't have to do the log of the borrowed
equipment anymore.

And I agree with you about the abuse of calls... No one really would
complain about one extra call for clubs or events, or even families.
But once there's abuse, how do you define the difference between 1
and 10? It's much harder than defining the difference between 0
and 1.

Mike

2992. John D Kasupski and Rick Bullon

Newsgroup: rec.radio.cb
Date: 1999-10-26 00:00:00 UTC
From: Harry <n5joy@hotmail.com>
Message-ID: <3815F4FF.E5EA5BAB@hotmail.com>
Source record: 7441

Callsign: KC2FNG Class: Technician Codes: HAI USA
Name: JOHN D. KASUPSKI
Issued: 24 Sep 1999 Expires: 24 Sep 2009

Here is another Rick Bullon wanna be.
This clown has been a NO-CODE tech for 1 month and his
signature line on the bottom says "73 and happy DXing"
How does a "no-code" technician know anything about
what "dx'ing" is unless he used to do it on 11 meters?
And "73" is meant ONLY as an abbreviation for "CW",
which John does not even know what di-dah is. Hey
John, how long were you a cber before you became a
"NO-CODER" last month? You and Rick belong to the
same dork club. You are an idiot Ham Want To Be.
Real hams look for dx on 15 meters and rag chew on 75.
They don't go to restaurants and put their handhelds on the
table and listen to the local repeater while they stuff their
fat faces with pizza. Real hams also don't waste their time
on the cb news group. I have a ham license but I don't consider
myself a real ham. But I am also not a no-code know it all
either. I am not a self righteous hypocrite, which I suspect
that you and Rick are. Maybe I don't have a life, but compared
to you and Rick I have a great life. Maybe you and Rick should
put this effort into something that really matters. Do you get
this excited about runaway government spending? Are you
this passionate about confiscatory tax rates? Do you even
care about the millions of people going to hell for eternity?
No, I suspect you only care about what cbers are doing, and
where you and your rubber ducky commando buddies are going
for dinner. Now that is a wasted life.

Happy DXing John
Harry

does anyone know the dimentions of the cobra cb dish antenna?
it seems to me that to be resonant at 11 meters, it would have to be awfully large. a friend and i are having a disagreement over this.
if any replies, please click the e-mail box also so i can save the answer.
TIA

jeff

Sorry to be confusing...I only meant that the channel mod triggered FM showing up as an option when the mode switch is toggled, but behaves as I previously described. I just wasn't sure whether or not additional modification would make the radio function properly on FM.

BTW, I have seen mods referring to VR12 as controlling FM power, but this was blanket for DNT Calypso | Euro CB 3900 | Midland 79-290 | Superstar 3900 LCD | Team TriCom. This, in a addition to the FM indicator lead me to believe the FM mode should work.
Unless I hear differently, I'll assume this radio can't be modded for FM.....
Thanks again.
Rob

Never had a problem with mine. The Chipswitch page
(www.chipswitch.com, no I'm not a salesperson) mentions that the radio
could have gone down to the 15m band but had some spurs that couldn't
be removed so they locked it out. Could that be what you heard?
Alternately, at 24.8 mhz your swr will most likely be quite high if
you have an antenna tuned for 11m, but that's not abnormal behavior.

Just my $2.00 (I'm pricey)

dirk

> Or will that swing kit mounted to my tree help the antenna that's mounted to
> the tree as well?

No.

The point is that swing kits don't get you anything that a
good tune-up won't get you. It's SOOO easy to put variable
dead-key power in a Cobra 2000. With that you can key at
anything from zero to 7 watts and swing to 15 to 20 peak
watts. It's the peak to dead-key ratio that determines how
loud you are. The makers of the swing kits know that and
use it to their advantage. Now that you know their advantage,
use it to your advantage.

There are MANY better signal generators than the 2040.
The 2040 is considered "service" grade equipment not
"laboratory" grade equipment.

> We can't seem to
> find a replacement, but we are open o suggestions.

Real, hi-end shops use service monitors like the IFR-1200
and IFR-1500. Even at the lower end there are generators
such as the Wavetek 3001 that will suit your needs.

> Also, does anyone know of
> a watt meter that will read peak modulation like a 1040 ServiceMater, we are
> looking for a meter that will read "Swing" well.

The 1040 is nothing special. I'll sell you mine
for a VERY reasonable price. I use my 2040 because
I'm a poor CB tech, but for a decent price I'll sell
it too. In other words, I have a mint B&K CB test set
with original documentation that I'll part with if
the price is right. I'm especially prone to part with
the 1040. The Mirage MP-1, the Autek Research WM-1, and
the Bulldog are meters that are moderately priced and
will show peaks like the 1040.

You are definitely right ICM. Base stations are the "Real Deal", but ebonics, politics... maybe, maybe not. Big Thunder-No numbahs, Brass, Old Man in the Wheelchair, Toll Free and the rest of the southern stations that are NOT ebonical linguists clean step some of the Afro-American Strappers. Sometimes just holding a QSO with these fellas on the BOWL is a nice change of pace. And (by no means of offense) their "Modules" are clean. Let me tell ya! Sometimes I can't get past Big Daddy Kane, CC and Loverboy, but when I do, those are the guys that I hear and try to get back to.

137 back out!

You've caught it at a good time. 14.313 has been known to be one of
the worst cesspools in the amatuer space at times. There's also an
area down in 80M the same way.

It usually runs fine, until someone comes on and 'interfeers'. Then it
seems things get out of hand real quick. But I've heard that there
were a few 'regular' instigators that have been silenced recently....

Mike

Sounds like....

He's trying to set up two antennas either as a phased 2-element
array (to reinforce signal along one axis and attenuating along
another at 90 degrees) or as a single active element using another
antenna as a director/reflector.

Source record: 7554

Why buy the 79-290 when you can get an Eagle Sidewinder? The Eagle has all the features of the MIdland like dual watch, last channel recall, band scanning, a course/fine clarifier, mic gain, and dual finals. What the 79-290 doesn't have but is standard on the Sidewinder is a REAL RF gain, FM mode, a PA, the ability to switch bands by pushing a button WHILE ON, 400 channels (verses 240,) and a microphone with channel up/down buttons. The Sidewinder is a much better radio all around. It may not have a removable control head or weather channels like the 79-290 but then again who really wants a radio that pops the control face off in mid key? As far as the weather feature goes, stick your head out the window and look up!!!!

Your opinion of what these VHF hams do is irrelevant. Whether you like
their conversations, subject matter, appearance, or choice of
restaraunts, the fact remains that they're operating legally, and in
most cases, courteously. If this type of operation seems boring to you,
in comparison to the "loud and proud", "Lets see who can step on who",
no holds barred, CB operation, then I can't expect you to understand.
Reality check: *YOU* are part of the problem.

You call a ham with an HT on the restaraunt table a "dork" with no life,
yet you see nothing wrong with running around with a 9 foot antenna on

the roof of your car, and enough batteries and alternators to power a small country, simply to run "big power". I would say that you would need a life as well.

The bottom line, people that are "into" technology hobbies are often viewed by the technology have-nots as "dorks". Like it or not if you're into CB, you're as much a "dork" as any ham, if only for slightly different reasons.

I don't think that I am part of the problem. I don't do any of the things
you cited above. I don't talk on radios much. I do alot of repair work.
I get on this group and try to get some technical expertise from
knowledgeable people. One of my favorite gurus was Dennis #12. He
knew more about radios than 99% of hams do. I don't get into the loud
mouth operators or any of the foul mouth discussions on this group. I don't
talk that way. What boils me is these idiots who get their no code tech
licenses and think they rule the world. Nothing on this newsgroup is illegal.
Telling people how to modify their radios is legal. Now if they talk on a
modified radio that is a different story. These idiots need to mind there
own business and spend more time on their local repeaters where they
belong. I don't care for a lot of hams and there are a lot more cbers that
I don't care for. Most radio operators by nature are odd people. I like
the technical stuff and the rest is garbage. Like I said most tech class hams
know nothing technical. That's a contradiction in terms don't you think?
Judging from your reply, I need to look on QRZ to see if your a no-coder
too. Most likely.

> That's Strange... I've had my 3k Classic (3CX1200A7) for nearly seven
> years and it's still on the same tube at full output.

>>>The 3CX1200A7 is a different animal altogether. That is a tube that is worth a shit.

Better yet, my
> friend who lives across town has had his 3K Classic X (8877) since
> the eighties with the original tube.

>>>That I find very hard to believe, as would Dan, the distributor for Henry.... The 8877 tube is the biggest failure that Eimac ever made.

You're the first person I have
> ever seen propose that having a heavy duty power supply is detrimental
> to amplifier performance.

>>>No, I am not saying that it is detrimental to amplifier performance. What I am saying is that the bigger power supply will dump a HUGE amount of current to the anode if their is a flashover, causing the anode and other parts of the tube to burn up.

>>>Henry's do suffer from parasitics in the old 3-500Z boxes. Those are the ones seen most on 27 megs. Your amplifier is a little "out of reach" for the typical 11 meter operator.

I think perhaps you've been hanging around the
> poster who once suggeted that hooking up one's coax to a car battery
> would amplify your signal.\

>>>Funny.

>
> My grandchildren will be using my Henry, quite possibly with the same
> tube still in place. Can you say that about an Alpha with it's dainty
> 4-watt grid dissipation tubes????? I think not!!!!

>>>Wait. Let's compare apple to apples... What about the two holer Alpha 8877 based amplifiers.

>>>Don't sell Alpha short, just because they became another profit center after Dick Ehrhorn sold the company! Before that, Alpha was a name up their with the rest. I agree, the 3CX800A7s are shit tubes, for shit amps... But, the 8877 is only a cut above... And the notches are not too far away! With the two holer, at least you had nearly the same amount of grid dissipation that a single 1200A7 has!

>
> You're not totally hopeless though...I do agree with you about the
> Collins. The 30S-1 is still to this day a great amplifier.

I am far from totally hopeless in the amplifier arena. Keep reading.

==========
Whoa wait a second now, for starters nothing has changed with his chassis so
remember the word "assume" its happening again, and secondly The wrap around
chassis has been around for sometime at daves ask 123 about the 250b cases
and the ac chasiss, and the plans that dave and dan had talked about over
breakfast about dave changing to the wrap around on the dc stuff. He even
went so far as to draw the plans for them, funny thing is when dan left so
did a few copys of the new chassis design that never made it to them metal
man. He aint learnin shit, he forgot more about electronics than the 3 of
you put togther.

>HOW MUCH DO YOU PAY?
>THERE IS MORE TO IT THAN CUTTING AND SOLDERING PARTS ON A BOARD. AND IF YOU
>ARE
>BUSY WITH MANY ORDERS THERE IS NO TIME TO PREP FOR THE WORKLOAD.

Its called assembly line production..Mister Ford invented it in 1929...You have someone whos only job it is is to cut boards or sinks.You have someone who only drills and presses.Someone to measure cut and sort various coax and wire so that when you`re building your 5 pill you just reach in the bin that say "5-pill coax" and grab one.It would be stupid to have to stop and measure and cut in the middle of every amp...Sure if you got one guy going from start to finish it will take a while..But I doubt even your set up is that disorganized

I hope I did`nt brain my damage.

R U a HAM? If you got a license, no matter what class, you are a
licnesed Amateur Radio Operator (HAM) no one should bemoan the fact of
class because those people who brag I AM AN EXTRA (ADVANCED, GENERAL)
are surely showing no class at all.

I fought for Tech-be proud.

3044. Why the HAM COMPLIANTS

Newsgroup: rec.radio.cb
Date: 1999-10-26 00:00:00 UTC
From: Ken Waters <kenh2os@pacbell.net>
Message-ID: <38165675.F06DF94E@pacbell.net>
Source record: 7586

I was wondering why so many hams put there complaints and such on the newsgroup.

Are they just trying to make sure they stir up things here or what?

I understand their complaints but I don't need to see it all the time.

I have CB's , some are modified, and some are not. It depends on the quality of the equipment. I don't use power, I don't care about screaming matches etc..... If I wanted to own a HF ham Style radio. I would have it.

If I wanted to have my money drained out of my pockets, I would put holes in them. I have been I tech for 20 years and just don't care for over price equipment with primadonna's on the other end.

At least CB's are real people, and you know right away what there worth.

Good day to all,
And lets see if we can be nice to everyone.

3045. The Superbowl or channel 6

Newsgroup: rec.radio.cb
Date: 1999-10-26 00:00:00 UTC
From: Boba Fett <bgv@li.net>
Message-ID: <RxsR3.11292$I_5.8735@dfw-read.news.verio.net>
Source record: 7587

I was sent this message regarding the bowl.

"If there are 10,000 cber's on the superbowl...
then out of 10,000 only 1,000 can be heard some of the times...
and out of 10,000 only 100 can be heard most of the times....
and out of that 10,000 there are probably only 10 of the most well known
guys that talk on the superbowl and can almost talk skip when they want.....
Do you know that out of that 10, maybe just maybe there are 2 of them on
this newsgroup. They probably have talked to each other as well.
East Coast???? West Coast???
Do you know who they could be???"

This is a great example why the bowl is not for the weak!
Check out those odds.

3046. Re: 148 GTL: Worth Fixing?

Newsgroup: rec.radio.cb
Date: 1999-10-26 00:00:00 UTC
From: Ken Hansen <khansen@njcc.com>
Message-ID: <7v5n36$98r$5@mars.njcc.com>
Source record: 7588

I'd look at it this way - if you replaced the knobs and the pots
behind them, would the radio still look "good" - if not, you may
want to bite the bullet and buy a new radio, selling your old radio
at eBay to offset the cost of the new radio.

Shop rates vary from $40 - $75 hour round me (NJ), but the higher
priced shops are really catering to commercial radio repair, not
CB or Ham.

A new "consumer" radio (non-export model) should cost about
$150 - $200 at worst, and a repair job will easily cost you $45x2,
plus part costs... In otherwords, the wrong side of $100. :^(

Hope this helps,

Ken
khansen@njcc.com

> functioning on FM?

No.

> How can I tell?

FM has a very different receive sound compared to AM.
With the squelch open (fully counter-clockwise) FM
has a very harsh sound compared to AM or any other
common mode of operation.

> Is there any other mod for FM other
> than the channel expo?

I don't understand. Channel Expo usually means
extra channels--not extra modes of operation.
The 79-290 already has a very easy mod available
to get 200 extra channels. There is no easy mod
(that I know of) to enable the FM mode of operation.

You may be confusing mode of operation and frequency.
For example, CB Channel 20 is on the frequency 27.205,
and the mode of operation (AM, FM, USB, LSB, CW) doesn't
change that. In other words, mode of operation and
channel (frequency) of operation are independant of
each other.

I don't know the current exchange rate, but 195 sounds like too much
for that radio. For SSB and FM use it's a good radio, but you may
want to keep shopping for a better price or go all the way and get a
President George. The George is a Lincoln taken to the next level
of evolution. The 2510 style radios are based on a 15 year old design.

That is the purpose, that is why Texas bug catcher antenna use the capacitence hat , to shorten the stinger. Now dont get me wrong I dont suggest using one of these things, just saying that is what is supposed to do if you add it "above" the load.
Power House / FeMaster wrote in message <5657-38146DF6-12@storefull-134.iap.bryant.webtv.net>...
It's a gimic and completely useless. If you really want one, just click the link below and buy it and put it on your Wilson 1000. You'll notice just how useless it is when your antenna can no longer acheive a decnt SWR wthout cutting off about 2' of the whip...

From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <381677AD.8EE1FF74@netzero.net>
Source record: 7598

Go to the local techs and see what they want to fix it. If the radio works and the only problems are straight forward and mechanical, an old-timer tech that has a number of 148s in his bone yard (parts radios) should be willing to fix it for an hour or less labor and $5 to $10 for parts. For example, I'd do it for $40; that's an hour at $30 per hour and $10 for parts. The radio is definitely worth spending $40 on. The techs that won't take that job and match or beat my price are all young-sters and/or punks that don't have a decent bone yard and shouldn't be trusted in the first place. You have the perfect radio for testing the competance and experience level of the techs in your area. Keep in mind that guys who want you to drop the radio off and pick it up in 2 to 4 weeks are obviously going to be ordering the parts and should be con-sidered middle-of-the-road techs.

Yup! I found no useful content on that crappy website.

I guess a registered monitor or scanner or whatever the hell he
is one of 3 things.

1) he's to stupid or lazy to take the ham exams

2) he thinks he's an udercover kinda "007" type dude.... and being
registered
kinda authenticates this in his mind...

3) He thinks showing his registration patch on his roebucks jeans will help
him
pickup little boys.....

| > 2510......
| >
|
| I agree. Many unscrupulous "techs" will tell you that a particular radio
| is "fried", and then offer to "take it off your hands", as a courtesy.
| The real deal is usually a simple fix (like a bad voltage regulator),
| and the "tech" will fix it later and will either add the "parts rig" to
| his personal collection, or sell it for a big profit, since the 2510's
| are scarce, and many people want them.
|
| I'll bet that the micro is not bad on the radio, and the real fix is
| something much simpler.

no, i would say it is YOU who is part of the problem.
harry is his own person instead of being a lock step / goose stepping ham like most of the rf police.
this just goes to prove what i've been saying all along.
if someone doesn't agree with the ham / arrl platform, they are lepers who's opinion doesn't count.
just for the record, your "opinion" here means less to us than ours does to you.

Believe it or not it is the truth. Around 10 years ago he bought an NIB
8877 tube from me as a back-up (a spare from my 77dx) because of all
the 8877 horror stories. It's still sitting in his shack unopened. I do
admit he babies the thing though (never pushes it to full output etc.).

We were just reading from different pages that's all. I for one have long left glass tubes behind. Eimac does'nt make them anymore and the price just keeps going up and up on them. Perhaps if Svetlana ever releases their 3-600Z things for the 3-500z amp market will improve, but I'm sure they aren't gonna give em away either. I have an L-4B just collecting dust in my shack....anyone interested??????

Alpha
> 8877 based amplifiers.

Didn't you just say that the 8877 was the biggest failure eimac ever made? Frankly, I always liked the 8877 (although it is kinda "delicate" as compared to the 3cx1200a7). It's just too damn expensive to fool with anymore.

I was comparing current production models with similar output ratings. If you want to compare the 77sx to a henry, then you have to compare it to the 5k classic two holer (2 - 3CX1200A7). When you do this the Henry still wins hands down in the ruggedness category. Besides, the 77sx still fetches more than $3000.00 used, and is also out of the reach of the "typical 11 meter operator".

>

away!
> With the two holer, at least you had nearly the same amount of grid
> dissipation that a single 1200A7 has!

I used to own an Alpha 77dx, and I agree......Alpha is definately not the company it used to be. For the price of an new Alpha desktop amp you can buy an infinately more rugged Henry console amp and have change left over. I'm sorry, but if I'm going to pay more than $3000.00 for an amp, it better at least have an oil filled HV filter capacitor in the power supply. And for goodness sakes Alpha....lose the 3cx800As....PLEASE!!!!

3070. Antenna help on grounding

Newsgroup: rec.radio.cb
Date: 1999-10-27 00:00:00 UTC
From: News groups <Thunder@cinci.rr.com>
Message-ID: <x4tR3.96$vD.4488@typhoon2.kc.rr.com>
Source record: 7469

I need some help from some of the pros out there concerning grounding...I slip seat (different truck everynight) the trucks are usually Sterling trucks with the famous fiberglass doors with no grounds.. The company does not want us to use mag mounts because I have heard everything from 1. they are grounded and we are nuts 2. it scratches the paint 3. it can fly off and cause a law suit (stupid since it is behind a large air shield) 4. it ruins the welds on the truck. I have tried the Wilson no ground it is garbage -can't hear. I have tried the solorcon zero ground it is better.. But I want to use my Wilson 2000 or a better antenna than the no grounds... I have heard from some people that a floating ground works and then others say it doesn't work.. I NEED ADVISE..

thank you

mike

Source record: 7475

When you do the mod on the 79-290, it opens a whole bunch more frequencies as I'm sure you're aware, but it also adds "FM" to the mode list... as you hit the mode button, you go through AM, USB, LSB and FM... but FM isn't actually added, but initially it leads you to believe so.

I think what he was asking is if there is a way to enable FM... if they have it on the display, then there MUST be a way to actually enable FM...

RCI 2990 is a 100 watt base unit. The radio has been modified for 26-32 band coverage, the moulation limiter has been clipped(r291)this are the ONLY modifications done to the radio. The radio is a 9 for cosmetics and is one screaming base. Other features include digital Echo, variable pwr, AM FM SSB and CW operation, built in swr meter,dual fans, and a D104 Silver Eagle microphone along with the stock mic. I would like 475.00 + Shipping. This is a 600.00 radio and 100.00 mic hard to beat a deal like this

> jeff

I don't think that this diode is the problem. If the diode were to open,
you would have no AM transmit at all, and SSB would be normal. If the
diode shorted, you'd see about a 1/2 watt more carrier power out on AM,
an everything else would work fine. Such is not the case according to
the symptoms. AM and SSB have no audio, which indicates a problem in the
lower level audio stages (Before the SSB tapoff to the balanced
modulator).

The 448, was indeed "different". I believe it used an REC 86345 PLL. It was expandable, but not terribly far. The radio that I had (and others that I've seen) had a serious problem where if you changed from AM to SSB while the mike was keyed, you could pop the final transistor out. I did it 2 or three times before I wised up.

The mic preamp, like I said previously, had a knack for going bad. I had to replace it with a standard op-amp, and make the necessary changes to get audio back again, since the replacement part was not locally available.

The TRC-449, (an 858 radio) which replaced the 448, was a MUCH better radio.

I respected Dennis as well, but I seriously doubt that you could back up
that 99% number. You're just pulling numbers out of a hat based on your
own personal bias.
I've known some brilliant hams in my life, that could build damn near
anything. I learned alot from these guys at an early age. They're still
out there, although it is a shrinking number.

Dennis would have made a great ham. He, like many other people, just
seemed to have an "attitude problem" with the IMAGE of the typical ham.
I hesitated getting my ticket for many years for the same reasons. But
there are enough "flexible" people on there now, to make it interesting.

So much of this CB vs. Ham stuff is based on nothing more than image.
Radio is radio!

> I don't get into the loud
> mouth operators or any of the foul mouth discussions on this group. I don't

And those "bad boy" type CBers are any different? You know, the guys
that think that your popularity is directly proportional to the amount
of power that your meter shows.

> Nothing on this newsgroup is illegal.

Be careful of making blanket absolute statements. There are MANY things
that could be construed as illegal, information not withstanding.

> Telling people how to modify their radios is legal. Now if they talk on a
> modified radio that is a different story. These idiots need to mind there
> own business and spend more time on their local repeaters where they
> belong.

So now you're their "mommy"? "Where they belong" is where they decide to
be, not where *YOU* think they belong. Many hams are also (ex) CBers as
well. Like myself, they care about the band and are concerned with the
degradation that seems to be going on in increasing numbers. Many hams
would never have gotten ham licenses, and would have remained happily on
CB if the "riff-raff" factor had not gotten so out of hand.

> I don't care for a lot of hams and there are a lot more cbers that
> I don't care for. Most radio operators by nature are odd people.

Any "techie" is usually an "odd" person to those that only know their
job, football, beer, the TV, and an occasional romp in the sack with
their bimbo of the day.

You play with radios and computers (Otherwise, why would you be here),
so that makes you somewhat "odd" as well.

> I like
> the technical stuff and the rest is garbage. Like I said most tech class hams
> know nothing technical. That's a contradiction in terms don't you think?
> Judging from your reply, I need to look on QRZ to see if your a no-coder
> too. Most likely.
>

I was in ham radio long before no-code became official. Interestingly
enough, I see more tech-minded nocoders, than extras these days. The
"techies" are the guys that always wanted to play with ham radio, but
were turned of by the code requirement (Much like I am). Now they can
easily pass the simple test and enter a much bigger playground to play
on. There is more experimentation going on, in my area, by Techs and
Tech +'s, than extras. Seems that all most of the extras want to do is
work HF DX, and contests, and are perfectly happy to buy all their gear.
(but they know 20 WPM, so they're the "better ham"). The "lower class"
guys are the ones building repeaters, building packet links, dabbling in
APRS and ATV, and actually building antennas and other projects.

I can't see any good reason, for people who are truly interested in
radio, to NOT go for the no-code. The test is easy, and the bands and
privileges that you gain are much better than what's on 11 meters.

Then there's the so-called "stuffed shirt" factor. So many people say
that hams are rigid, boring, shuffed shirts. Maybe a few older ones are,
(the ones that talk about their failing health for hours on end)but if
enough of your friends get on the ham bands, you can operate the way to

want to (within the rules), and the heck with what other people think. There are certainly enough bands to choose from.

I think alot of the CB metality also has to do with a psychological condition. The same condition that makes binge drinking more fun when you were underaged. The thought of "beating the system", and getting away with something illegal, makes doing it so much more "fun". Shooting skip, running power, modifying radios, all illegal on CB, but perfectly legal on the ham bands.

> > The bottom line, people that are "into" technology hobbies are often

> hey harry, correct me if i'm wrong.
>

The big problem with Harry's "scenario" is that he make a few (too many)
blanket assumptions. The biggest one, is that all no-coders are
non-technical. That may be true in some cases, but certainly not in all.

Secondly, technical knowlege is not required to be courteous and
observant of at least the rules of decency and common sense.

You guys are just as guilty as the "wannabe" hams you are attacking. You
are making assumptions without any facts to back it up. Can you say
HYPOCRITE? Sure you can.
You don't like it when some of these guys (and they're not all hams)
complain about the lawlessness of CBers, and make a blanket
generalization. Now you retaliate with the same?

Blanket ad hominem attacks on people without any facts are nothing more
than mudslinging, and no different than children in the playground.

And there is is in a nutshell. It's not the amps. It's not the freeband. It's the ATTITUDE. The "I'll do what I want, the hell with everyone else" attitude. If your first reaction to this post is to say "F* you", then you have it and are part of the problem.

There is a good passage in the bible that basically says to do on to others, as you would have them do onto you. If people would respect the rights of others, and not be so self absorbed, and self centered, then there wouldn't be this mess on CB.

If you don't like CB, and turned it off and became a ham, go
find another NG to whine on. You are a hypocrite! You are nothing!
Don't bitch at me for using a two pill. Just because you can't talk
skip on AM from your mobile on 40 CH CB, can't stand the heat and
general dysfunction on CB, take your NO-CODE license and get on
2 meters. I'm sick of your whining. Dr. Kavorkian has your shot ready!

Yeah, I agree there. I had a friend with a 448, and you could expand
it, but not NEAR as far as the 449 chassis. I didn't think it sounded
near as good as the 449 on transmit audio either. Rather tinny.
Although it was just as sensitive as the 449, and handled interference
a little bit better until I ripped apart my IF strip in the 449 and put
in
the crystal filter (RS built the 457 that way, so I just ordered the can
and the filter, then moved one can in the 449, took out the jumper,
and put in the new can and filter and tuned it up). I don't know
why RS carried both rigs, unless it was an issue with quatity, or
just the fact that RS wanted more rigs in their lineup in 1978.

I never knew a 448 to fail though, and I don't recall EVER seeing one
in the repair shop...

3107. Re: 148 GTL: Worth Fixing?

Newsgroup: rec.radio.cb
Date: 1999-10-27 00:00:00 UTC
From: r8500@aol.com
Message-ID: <19991027103132.22635.00002563@ng-fi1.aol.com>
Source record: 7506

Thanks to everyone who responded to my inquiry, both in the newsgroup and via email. It's great to see that there are so many knowledgeable people willing to help out. Fortunately, I was able to have my 148 GTL fixed at a local radio repair shop for only $15.00. It turned out that the knob shaft for the volume/squelch control pot was not as badly damaged as I thought, and the tech was able to straighten the knob shaft without much difficulty. The dynamike control pot had to be replaced, however. There was also an LED wire which had broken loose when the radio was dropped which had to be resoldered.
Thanks again for all the help--it is greatly appreciated.

The TRC-55? The old 23 channel rig with the 'flip over' clock? It
even worked as an alarm clock?

Wow, I haven't seen one of those for maybe 22 years!

Just find something that 'fits' into the AC receptical. But if I
remember
the rig, there was a 'switch' in the AC receptical. I'm not sure about
the 55 though, but look at it, and see if there was a mechanical
lever so that when you plug in the right power cord it switches out
the 12v jack. Not all the rigs had that.

Sorry can't be more helpfull, but even when that rig was current, it was
fairly rare....

Please read all of this post.

1. I have a WORKING Realistic TRC-458 which is a 40 channel CB base AM/SSB radio that I am selling for a freind. The radio is some scratches and a bit dirty, (belonged to a smoker). Has NEVER had any extra channels put in it.
Great radio, as it can do over 200 channels. Info on the net. It has the 858 chip.
Full service manual included (a $ 25.00 value)
Sell 1 and 2 for $ 75.00 plus shipping.
Picture avaliable for the TRC-458 ! ! !

2. A TRC-449 mobile CB radio (same board as the TRC-458) for parts.

3. A Radar Detector, manufactured in the 70s (working the last timre I used it, before the law changed).
Sell for $ 35.00 + shipping.
Picture avaliable ! ! !

4. A Kenwood KSC-4 battery charger (working) with service manual.
Sell for $ 25.00 + shipping.
Picture avaliable ! ! !

SAVE SAVE SAVE! ! ! !
I WILL ask $ 125.00 + shipping for ALL . Items sold as-is, radio have no mike.

Please reply to email as I do not often get to this newsgroup. He want to get this stuff sold ASAP, so please reply ASAP. I will reply to you Monday to Friday only.

Thank-you,
Greg

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connection as well. Uses 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

Homer

3116. Eagle Sidewinder 400 help

Newsgroup: rec.radio.cb
Date: 1999-10-27 00:00:00 UTC
From: Anthony Cash <kd4k@ga.prestige.net>
Message-ID: <DgGR3.174$23.13039@typ11.nn.bcandid.com>
Source record: 7515

Anybody out there got a mod to make the Sidewinder 400 hold it's frequency
and mode when turned off and back on?????
If not does anyone have a diagram of this radio or pin out info on the SY202
microprocessor used in the Sidewinder 400.
Seems to me that you should be able to add a 3 volt lithium battery and a
switching diode in the right place and cure this problem.
Thanks in advance
Tony

Now what the hell does mean you dumbass newboot ham driveup?
You probably dont get out much, and if you do I bet you dont act like this in public, and I bet you do very little about the drug problem with children, or gang violence, which is a hell of a lot more important than your jealousy for someone who can talk on the radio and choose not to take a test to allow them to do so. Just because you had to study your ass off doesn't mean we have to, hell the test is fairly easy to memorize, but learn 20 words a minute at code and then you will be doing something. You see I am a CBer by choice, the friends I have hear dont require me to be someone IM not and they could give a rats ass if I show a certain character or say breaker, breaker. I can tell you this much I dont operate out of band, my equipment is cleaner than yours and I do help with the drug problem and gang violence by speaking at schools and around my neighborhood amongst others and if you were to bring your whinebag stuck up attitude in my face I would be the shit out of you...Period, not because of what you preach, but because of how you preach it. stop wasting our time and go see whats happening on UHF and VHF and plan the way you are going to install a real antenna one day, not some converted TV antenna. MUDDUCK!!!!!

Hey John,
Figure it to a light (1 watt) 2000 feet away on # 22 gauge copper wire, in a area with a temperature of 135 degrees Fahrenheit, now tell me what the voltage drop would be and what size wire should we upgrade to? Lets say this is teflon insulation, rated at 200 degrees Celsius.

Lets just see how smart you really are, I bet you cannot answer this or even reply to it dumbass.

If all of what you say is true then why do you whine so bad about keydowns?
these are always done on the lower CB channels for a few seconds at a time
once every few months, a hell of a lot cleaner than these same people
running them on upper channels and having daily QSO's, which is where they
would probably be if it were not for key downs, and no the message was to
John not you.

I am planning on mounting an I-MAX 2000 in a tree that has a height of about 90 - 100 feet (Hemlock I think) A couple of opinions would be helpful from others who have done this.

The tree's trunk in stout most of the way to the top.

How far out from the trunk should I mount it, and

Does the trunk intefere with Xmit and recv?

Also, Any mounting ideas?

Thanks.

I've been thinking about getting an Expo 100 S+ kit for my Cobra 25 LTD/WX Classic. How hard is it to install for a do it yourself project? My only experience with the soldering gun has been pl259 plugs and mic connectors. Is there any shops out there that will do it? Thanks.

Howdy!

I'm learning more and more about CB's, and noticed that some [such as the Galaxy units] have "Clarifier" and "Talk Back" features. Ok, I'm a newbie, but what are these and what's the advantage to a CB?

Thanx for sharing your expertise!

Best Regards,
Jay

The tech license hasn't been around for 20 years if thats the "tech"
your reffering to.Since february 14th '91 I believe.
Also equipment prices have fallen by about 1/3 in the last 3 years for
a lot of the popular stuff.An HF rig with 10 bands and 6 modes,100
watts,tons of scan and memory options,etc,etc,etc,can be had for as
little as $599 and lesser rigs cost less.Compare thet with the high end
CBs with 3 modes,12 watts,1 band,MAYBE 10 memories,MAYBE some primitive
scan function and you tell me which is the better deal?

Talkback is just to let you monitor your own voice but it may or may not sound the same on the air.Galaxy is famous for useless gimicks like echo boards,transvestite boards,frequency display and talkback.These seem to impress the kids.
Clarifier is used on SSB radios to tune exactly to the other station and although it may be called something else ALL SSB radios have it and I highly recommend you get an SSB rig.

> Your license is a STATION license, with OPERATOR privlidges.

That is not true at all. You are licensed for the privelidge of using the equipment on the bands designated.

If your license was a station license, you would have to have equipment that was capable of working within the constraints of the license (like a CB radio has only 40 channels, etc.).

>
> You can still technically apply for multiple licenses for multiple
> locations, although if you do that, the FCC frowns on that.

No, that is not totally true, either. You apply for multiple licenses, and those licenses better be for different "things", ie. repeaters, controllable stations, etc.

> The problem was the FCC 'technically' allows individuals to file for
> all kinds of groups and club licenses.

No, not <<totally> true again. The FCC allows a club to license a station. However, the control op for that station better have the same privelidges to operate on that band, or the license is in violation (on both ends!)

> What happend was when the database was checked, they found individuals
with many more than they could ever use. One guy had 23 separate calls!

Message-ID: <mLNR3.10764$Ph7.72478@insync>
Source record: 7606

Actually, unless there is a valid club or special event station, I see
it as being abuse. There are few enough calls to go around, we don't need
one
person using multiple calls. In this region, you're stuck with a 2x3 call
until you hit Advanced class, and even then the Extras are all 2x2 instead
of
1x2 or 2x1 calls. It doesn't help when someone is holding multiple calls of
ANY licence class...

>>>However, it is almost a moot point, as the way the licensing is going,
there won't be much of a need for any 1X2 or 2X1 calls after the next few
years!

Here are a couple of suggestions. Get a good sturdy pole would be the most important. A 30 foot push up pole would be best if you plan on having it stick out of the tree much above the last place you strap it. Use good quality plumbers strap or something similar to this to strap the pole to the tree. Use Galvanized nails too. For the bottom I would look at Radio shack PART # 15-899. It is a base designed to handle a pole in it. this is a great way to mount the base at a Y in the tree to keep it from kicking out should the lower strap give out. For 8.99 its worth the piece of mind believe me. As for Coax I prefer Beldon RG 8 in the white. It seems to be more pliable then the Black. If ya have amy more questions feel free to Email me.

Source record: 7624

Thanks for your opinion..I can pick up a ts3010 NIB for about $345 Canadian or 235.00 US. This price would incl taxes and no shipping as I could p\u. The 9001 say at 250.00 US would cost me about $370.00 Canadian, plus shipping, plus customs fees\tax...for a grand total of approx $450 to my door. So I guess the bottom line is for about another 100 bucks i could pick up the Alan. I guess it's worth the 100 for the difference in radio. Its the 15% tax here in Ontario, combined with the US\CAN dollar exchange thats a real kicker!

Hope to hear from others who know either radio.

THanks, Jeff

>This clown has been a NO-CODE tech for 1 month and his
>signature line on the bottom says "73 and happy DXing"
>How does a "no-code" technician know anything about
>what "dx'ing" is unless he used to do it on 11 meters?

Actually, it's easy for ANYONE to know something about DX'ing, provided that one is not restrained by the same narrow interest in radio that you apparently are.

One doesn't need any kind of a ham license at all to know what the term DX means. What is and is not DX varies with what band you are on. I live near Niagara Falls, NY. For me to talk to - or hear - a station in say, Columbus, Ohio on VHF would be DX. For me to hear the same station on HF would not, as far as I'm concerned.

Nor does one need to transmit at all to participate in it. I got my start by chasing DX on the shortwave bands for 33 years as an SWL. And that's been chasing UTE stations, not the megawatt powerhouse broadcasters. Try logging and confirming McMurdo Station in Antarctica, 9450 miles from my station. That is DX, whether you like it or not. So is hearing Texas on VHF on my scanner.

>And "73" is meant ONLY as an abbreviation for "CW",

Yeah? Then why do I hear hams using it on all the voice modes, on HF as well as VHF/UHF? Why do commercial RTTY stations end their transmissions with it?

>which John does not even know what di-dah is. Hey

You *assume* I have no knowledge of morse because I happen to have a no-code license at the moment. Didn't your mommy ever tell you what happens when you assume, Harry?

Di-dah is the letter A, which is the first letter of a profane term referring to a certain portion of the human digestive system to which your attitude causes you to bear a remarkable resemblance. Can you understand that, or do you want the two di-di-dits, the dih-dih-dih-dit, the dah-dah-dah, the dih-dah-dih-dit, and the dit to go along with it?

>John, how long were you a cber before you became a
>"NO-CODER" last month?

24 years. So what?

Since what's good for the goose is good for the gander:

N5JOY REED, HARRY R
LIC ISU 9-MAY-1996
TECH PLUS
LIC EXP 9-MAY-2006
LST UPD 9-MAY-1996

So, Harry, how long were you a CB 'er before you became a ham in 1996? And you've had three years to upgrade your license, so why are you still at the same license class you started with three years ago? Written exam for a General too tough for you?

>same dork club. You are an idiot Ham Want To Be.
>Real hams look for dx on 15 meters and rag chew on 75.

Real hams hold an Amateur Radio License issued by the Federal Communications Commission if they are American citizens, or if they are not U.S. citizens, then issued by whatever licensing agency governs amateur radio in the country in which they hold citizenship. Want-To-Be hams have no license, and operate in the so-called Freeband between the CB band and the 10m ham band...or sometimes even IN the 10m ham band, all illegally of course. As a Tech Plus, you have phone privileges in the novice phone sub band of 10m and perhaps you have even heard some ham wannabes up there. If you have, and that doesn't bother you, then maybe you should just mail your license back to FCC.

>They don't go to restaurants and put their handhelds on the
>table and listen to the local repeater while they stuff their
>fat faces with pizza.

Oh, really? Just what qualifies YOU to judge who is and is not a "real ham" based on whether or not they carry a handheld with them when they go out to eat or have coffee with other hams? Hmmm? Tell us that.

One of the guys I sit at a table with when I go out for coffee is a General and has a 12 by 12 room in his basement where his shack is. The walls and ceiling are covered with QSLs of contacts made on CW, AM, SSB, FM, and some digital modes as well. He listens to the repeater because he is on the station committee for the club we both belong to and in the event that something goes wrong with the repeater, he is one of the people who has the responsibility to go over there and take it off the air or fix it, as appropriate. I suppose you would consider him a ham wannabe?

And yes, I bring my handheld with me and leave it on the table too. I'm sure not leaving it out in my truck where it might get stolen. I don't need to have it turned on to listen to the club repeater because there's already a handheld tuned to the repeater belonging to the guy

across the table from me. So I let my batteries rest.

>Real hams also don't waste their time
>on the cb news group. I have a ham license but I don't consider
>myself a real ham.

I will resist the temptation to again state what I consider you to be. I have already done so in this message, and in any event, it is a matter of opinion.

> But I am also not a no-code know it all
>either. I am not a self righteous hypocrite,

That, too, is a matter of opinion, particularly the part about being a self-righteous hypocrite. Your further comments show the contrary to be more likely to be true:

>to you and Rick I have a great life. Maybe you and Rick should
>put this effort into something that really matters. Do you get
>this excited about runaway government spending? Are you
>this passionate about confiscatory tax rates? Do you even
>care about the millions of people going to hell for eternity?

Nice of you to ask this question AFTER you've already launched a personal attack on both myself and Rick in the NG. I will not waste my time rebutting your drivel because such things are off topic in a radio NG anyway. If you want to talk politics or religion, take it up with your Senator, or a priest.

>No, I suspect you only care about what cbers are doing, and
>where you and your rubber ducky commando buddies are going
>for dinner. Now that is a wasted life.

Oh, really? Did you just invent a new cure for cancer? Did you just find intelligent life on another planet? (For that matter, can you even find intelligent life in your own shack?) What major contribution have you made to society that qualifies you to judge whether or not other people's lives are wasted? Self-righteous hypocrite seems to fit you to a tee.

>Now what the hell does mean you dumbass newboot ham driveup?

Channel frequencies. Reference frequencies from which the carrier
frequency, suppressed or otherwise, may not deviate by more than the
specified frequency tolerance. If you had bothered to read Part 95,
you wouldn't have to display your ignorance by asking.

>your jealousy for someone who can talk on the radio and choose not to take a
>test to allow them to do so.

You think that's what this is about? Your reading comprehension scores
in 8th grade must have sucked the big caramel stick.

Lots of people talk on radio without taking any test to allow them to
do so. I have no problem with that, as long as it is legal for them to
do that. The people that I have a problem with are NOT operating
legally. Some of them - maybe even YOU, judging from your comment
above - don't even know what the rules ARE, let alone make any effort
to follow them. Those are the people my comments are directed at. If
the shoe fits, wear it.

> Just because you had to study your ass off
>doesn't mean we have to, hell the test is fairly easy to memorize, but learn

Actually, I didn't study anything.

I went to a hamfest with a couple of my friends because I wanted to
find an HF receiver there to use in my hobby of shortwave listening. I
listen to a lot of HF utility stations and I needed a second receiver
to park on a certain frequency I wanted to be able to monitor while
scanning the bands with my other receiver. And, I did buy an HF
receiver at that hamfest.

While I was at the hamfest, they were having a volunteer examining
session and taking walk-ins. One of the guys I went to the hamfest
with was ribbing me, saying that if I had studied for a month or so
before that day, I could take my test and get a ham ticket. I
responded that I probably already knew enough about the subject from

my 33 years as an SWL to pass the Novice class written test without studying if I wanted to. That remark was met by general laughter, so to prove a point I made a bet with my friend. I told him I'd go in and take the test, but if I passed it, he had to pay for it. If I failed, I paid for it. And the loser also bought lunch. He agreed, and I went in and took - and passed the Element 2 test.

Having done that, and thus having won the bet, I decided to try an Element 3a written test - at that point I had nothing to lose anyway - and much to my surprise, I passed Element 3a also, thus qualifying for the Technician class license that I now hold.

I actually had no interest in ham radio at all until I got my license entirely by accident.

>breaker, breaker. I can tell you this much I dont operate out of band, my
>equipment is cleaner than yours and I do help with the drug problem and gang
>violence by speaking at schools and around my neighborhood amongst others

Good for you. But you miss the point that if you operate cleanly and legally, than I have no problem with what you are doing. It's the people operating illegally that I have a problem with. Like I said, if the shoe fits, wear it. If it doesn't fit, then you needn't concern yourself with it.

>and if you were to bring your whinebag stuck up attitude in my face I would
>be the shit out of you...

Well, first of all, if you're running legally there we be no reason for me to getting in your face about it, so it is a moot point if what you say is true about you operating legally.

Secondly, you sound pretty tough sitting who knows how many hundreds of miles away behind a keyboard, but as far as real life goes, you have no knowledge of my background whatsoever. You MIGHT end up doing what you say you would do...or you might TRY it and wind up in jail and/or in the hospital or morgue. You ought to learn to find out something about the people you're shooting your mouth off to before you go shooting off your mouth.

>voltage drop would be and what size wire should we upgrade to? Lets say
>this is teflon insulation, rated at 200 degrees Celsius.

>Lets just see how smart you really are, I bet you cannot answer this or even
>reply to it dumbass.

The formula to calculate voltage drop is:

vd=((2*k*l*i)/cma)*factor

Where k=12.5 for copper, 18 for aluminum. factor=1 for single phase,
.866 for 3-phase, and .5 for 3-phase 4-wire. l is one way circuit
length in feet, i is load in amperes, and cma is cross sectional
circular mil area of the conductor.

However, voltage drop alone will not determine the correct size
conductor. Conductor size must also be selected to carry the load as
determined by the appropriate ampacity table, which I don't happen to
have handy.

Of course, all of that has more to do with the National Electrical
Code than it does with anything to do with RF...dumbass...

3191. FS: Cobra 75 WX ST - One Week New!

Newsgroup: rec.radio.cb
Date: 1999-10-28 00:00:00 UTC
From: Jay Chlebowski <tijec@primary.net>
Message-ID: <B43D5533.18D5%tijec@primary.net>
Source record: 7640

Howdy:

I've got a basically brand new Cobra 75 WX ST that I installed a week ago that I need to sell. Quite simply, it doesn't fit my application all too well...

First, know that this is an all in one unit with a very small "brain" that's about 1in x 3in that you can hide anywhere. It's well suited to almost any vehicle. Here's a picture:

http://www.bills2way.com/equip/images/c_75wxst.jpg

I really have only two gripes with this unit:

1. I drive a diesel truck and the small speaker in the handset is not loud enough for me to hear over the roar of the engine at highway speeds. If I open the window, forget it. Moral of the story, don't run a diesel with this little guy -- if you've got a gasser you're fine. I _would_ add an external speaker & forego the loss on investment, but just don't like the looks of 'em, nor do I really have a decent mounting spot -- I basically need something with a front-firing speaker that aims at me.

2. I have small hands and can't seem to get my hand around the unit well enough to adjust volume on the one side and hit the PTT button on the other. Anybody with normal size hands will be fine with this, but I don't like shifting my hand on the handset all the time. Call it a pet peeve.....

Some will recall my static and noise complaint the other day. With the help of a local CB shop we traced that to ground noise and a poor squelch setting, so I can't in any way fault this Cobra unit. In fact, if it weren't for the above factors, I'd keep it as it fits the "installation" of the other gear I have in my truck to a "tee." Oh well...

I paid $89.99 [List Price of $119] from Bills 2 Way last week, plus shipping. I have everything for this unit, all documentation, wiring & mounting hardware, except for a few screws I lost for the Mic mounting bracket -- I used some screws from my "coffee can," and I'm sure you can do the same.

I'm looking for $70.00 [money order] plus freight, and it's yours -- not bad for what's essentially a barely used CB.

You can respond here, but I will get back to you quicker if you contact me via email.

Best Regards,
Jay

I think you and Rick started the personal attacks here. I believe I
can get a few people here to verify that. I mean this whole
thread was started because you and Rick want to push your
RF ENFORCER tactics and bore everyone here while you
recite part 97 for us. I believe most of us here know what it
says already. You are not our mommy.

>
> For that matter, can you even find intelligent life in your own shack?

Only when my wife comes in. No, really I don't have a shack. I have
a 6 foot bench in my garage with test equipment on a rack above it.
I have a B&K-1040 and 2040, a 500 MHz HP counter, a 60 MHz
Tek 2213 scope, an HP 204C, a Simpson 260-8 and a Fluke 27FM,
a Trad URM-25D signal generator, a beta transistor tester, a curve tracer,

modulation and deviation meter, watt meters, and a bunch of other clutter.
I have an Icom 2AT that I bought 13 years ago and some mobile cbs
that I own but are not hooked up. That sums up my shack.

The problem is we have been having technical discussions with some
very intelligent techs on this group. But lately some morons and some
newbie hams have come on here and made it not so enjoyable. You guys
whine and moan about the legalities of our second amendment rights.
You newbies are the ones who started all this. We have lost most of the
good techs on this group because of jerks like you. They don't want to
read your garbage. But I am not as smart as them and I remain. Because
there are still some good ones out there. I am not passionate about
radio. I very often leave it in favor of my family for weeks at a time. I am
agitated by self appointed RF POLICE and discussion group police.
You have no business here so move on.

>
> 73 and good DX'ing while I bore you with my part 97 knowledge,

This is the reason amateur radio is not appealing to the masses. Why would I want to publicize my name and address only to have some jealous idiot broadcast or turn it over to anyone? I would be the first to admit that ARS is very attractive but all of the crying turns me away. I have been on the radio since 1977 and I have been jammed, keyed on, had my ears plugged and bled on and I never felt the need to turn someone over to the FCC. It is as simple as this: turn it off or change the channel. Then there are "Guests" in this newsgroup. The word on the street is they feel they have been mistreated by CBers. I figure they need to feel important too. Kinda makes me glad I'm a man.

Remember, this is CB. No crying allowed!

Several things about bleedover:

- You know where your friends are

- When you bought the radio, you bought the bs/bleedover

- You're bleeding on your neighbor as much as he's bleeding
on you
- Stop crying and start buying!

> me glad I'm a man.

If the "anyone" you are referring to is the FCC, realise the FCC is
not foolish. They will seldom take drastic action (fines, etc) unless
they have a recording. And, if they have a recording, they can easily
tell if that is your radio on the recording. In other words, they have
ways to identify your radio from the radios used by others.

As for your vague complaint about self-policeing in the Amateur Radio
bands, it is urged by the FCC. And I strongly agree with that policy.
A ham operator can use equipment with very advanced capabilities (high
power output, satellite, moon-bounce, long-range repeaters, potential
global communications, etc.).

Without rigid policeing (both self-policeing and policeing by the
FCC), a misguided person, out for mischief, could cause a lot of serious
problems for a large number of people, including those on other radio services.

Therefore, it is not as simple as "turn it off or change the channel."
If we allow those out for mischief to tarnish the image of amateur
radio (by causing problems for others), we would quickly lose our
priviledge to use the great number of frequencies and capabilities
entrusted to us by our government, and the governments of other
countries around the world.

In other words, with increased capabilities comes increased
responsibility. Most ham operators understand, and accept, that
responsibility fully. If you cannot accept responsibility, I strongly
urge you to stay out of ham radio.

alot the same story here John, I got my license by mistake also ha ha....back in the early 60's I was just out of the service (Navy) and had nsome time left to use the GI Bill for extra schooling and decided to study electronics and started a 2 year course. I had been a novice but had let it expire because I was too busy to mess with it....anyway at the end of the course I drove to Kansas City to take the exam for the 2nd class radiophone license and passed it with flying colors....upon leaving the FCC office I noticed a sign telling about the amateur exam's the next day. so I figured what the hell, might as well stay all night and go for it. I did and passed the General exam....it was easy after after the test I had just took.....but just barely passed the code.though....by the way I also got a Sonar endorsment. why? because it was only one chapter in the book and I was bored the night before the test. man thats just what i needed, a sonar endorsment in N.W. Arkansas ha ha...

I am a firm believer that all CB radios sold should be sold with a box of Band-Aids. That or a box of , well you know, to stop the bleed over.

Ok, lets expand on this a bit. What is it about CB that is less boring
than ham radio? What can you do on CB that you can't do on ham?

The people with the "elitist attitudes" can be avoided. You can easily
recruit a group of friends to 2 meters or 6 meters, and have a ton of
fun. You don't like appliance operators? Great! neither do I, but I
don't let that affect what *I* do on the band. They do their thing, I do
mine, there's room for all.

Who started it is irrelevant. It takes a much bigger person, to just say "Sure, whatever you say" and go about your business.

The one sure thing about the human race is that we're all different in one way or another. There will always be conflicts when people of different mindsets collide. But as long as what you are defending is purely subjective in nature, then you have no more "rights" than the other guy does. It's all based on opinions. We all have them, and they're all equally valid or invalid.

Calling someone a "dork" based on their particular hobby interests is just a reflection of your own insecurities. (the old school trick. Pick on someone else before they can pick on you).

Someday, that "dork" may save your life, or may be the guy you have to interview with for a job, or to get a mortgage at the bank.

News Flash: Not all of us want or appreciate skip or the people who insist on working it. Many of us like to chat among the locals with relative peace.

Remember, for every yahoo that you try to work skip with, you are interfering with local communications in both your area, and the areas that you "skip" to.

Your words reflect your selfish attitude. You do what you want, and don't care about the people you affect. It's not up to them to "just turn it off, if they can't take it", they have a right to operate there just as you do. The world doesn't revolve around you and your interests. A thoughtful and courteous person always allows room for others to enjoy their recreation as well.

I can only hope that someday, you'll get a lesson in humility, when you're on the receiving end of the acts of another selfish person, and get a taste of what it feels like.

> broadcast or turn it over to anyone?

Why should you fear this? Only people that have something to hide need
to fear this loss of anonimity. Besides, what ham would care? Hams
frequently give out their phone numbers or addresses on the air. Unlike
CB, there aren't a bunch of mentally challenged people waiting to cause
trouble with this information.

> I would be the first to admit that ARS
> is very attractive but all of the crying turns me away. I have been on the
> radio since 1977 and I have been jammed, keyed on, had my ears plugged and
> bled on and I never felt the need to turn someone over to the FCC.

There's very little of this type of activity on most of the ham bands.
Why should anyone have to endure this intrusion into their recreation?
It would bother me that certain selfish individuals hold the rights of
the rest of the public in contempt, and would welcome any action to
correct that injustice.

> It is as simple as this: turn it off or change the channel.

Why should anyone have to accept that? Other people paid for, and desire
the right to operate in peace. Why should a select few selfish morons be
allowed to ruin the fun of a greater majority of people?

If they were truly your friends, they would be where YOU are.

> - When you bought the radio, you bought the bs/bleedover

No, you bought the means to enjoy a hobby. Interference is a fact of life. But interference caused by the deliberate actions of a select bunch of self-centered people, is not something that you should have to put up with.

>
> - You're bleeding on your neighbor as much as he's bleeding
> on you.

Not necessarily. If I run a 100% legal station, I will not be bleeding (Splattering) nearly as much as someone who paid "Joe the Butcher" to "tune" his radio, and then run the splatterbox into a class C amplifier and make a bad thing even worse.

> - Stop crying and start buying!

I find is somewhat ironic, that the "lawless" people have been telling the rest of us for years to just "turn it to the left, and stop crying", when they run their illegal equipment, are now the ones crying that the FCC may soon be clamping down on them. I say, what goes around, comes around.......

Source record: 7659

Toll Free,

Well, your opinion. I know that my latest license does not word it
that way, but the liceneses the FCC to grant up until the mid 1980's
specifically said station license on the form with the call sign on the
left side, then the right side said sometime like operator and
privlidges or something. (This was the old yellow form in the carbon
paper peel apart thing that was hardly readable at all.)

I WILL have to research that further.

And you are correct in what you say, but the license is a station
license, and you can define what is in that station. I see no reason
why you feel that a station license means the equipment would
be limited. Being a HAM station means just that, a HAM station.
There is nothing in the rules that limits any equipment that can
exist in a HAM station, just how it is operated.

As to the multiple license issue... Yes, you are correct, but there
are still licenses on the books for multiple stations. Under the old
rules, if you went 'portable', you legally had to sign that you were
'portable'. (For some reason, mobile was not portable, unless you
were out of your area.) You were allowed to be 'portable' for so
many days without formal notification, and you HAD to sign your
call with a 'portable x' suffix, even in your own call area where 'x'
was the area you were operating in. After so many days you were
required to have a letter on file with the FCC engineer in charge
for that area that you were 'portable'. If you changed you address,
and you crossed into a new area, then a new call sign would be
assigned.

There was some issues with people like college students and people
with 'summer homes' kind of thing where they were over time limits,
and the way a lot of people 'got around' the issue was multiple calls.
Technically I suppose they were 'one person clubs' or whatever, but
while I haven't looked for them lately, I know that as late as the end
of the 80's there were calls for VT and NH for people from other
states that had home calls elsewhere, because at the time I knew
two individuals in that situation. I'm not saying that was correct with
the 'intent' of the law, but the letter of the law allowed it to occur.

> Ok, lets expand on this a bit. What is it about CB that is less boring
> than ham radio? What can you do on CB that you can't do on ham?

OK, Ill give it a shot:

1. CB is less formal (eg callsigns)

2. CB is more diverse (More CB radios mean more individual personalities involved, good and bad)

3. CB costs less

4. CB is less likely to be monitored by someone who thinks they were knighted a radio cop

5. CB is time tested. The CB band behavior hasnt really changed in the past 30 years. Look whats going on
right now on the Ham bands. (eg 20 and 75 meters)

6. CB equipment is much more easily acquired. (Theres more Radio Shacks than there are HRO's)

7. CBers are much more open to different opinions. (Try going on 80 meters and openly advertise that you are
a Democrat, you'll be ripped to shreds)

8. There are some good CBers who dont give a rats ass about how a radio works, yet they are great people to converse with, which this is probably my biggest "Pro CB" point. The reason for this is because these are the people that would have never found on the Ham bands to begin with. When you go on a Ham radio, you have a basic understanding of the person on the other end of the QSO by virtue of the common ground created by the HAM license. With CB, you get what you get, sometimes bad, but always diverse.

> The people with the "elitist attitudes" can be avoided. You can easily
> recruit a group of friends to 2 meters or 6 meters, and have a ton of
> fun.

Why should one go through these extremes just to talk on a licensed required radio spectrum when a person can do the same on CB without a license, in addition to having a more diverse audience or pool of potential friends? Recruiting people for CB is no different from recruiting people for ham.

>You don't like appliance operators? Great! neither do I, but I
> don't let that affect what *I* do on the band. They do their thing, I do
> mine, there's room for all.

This I agree with, however after having been involved in both Ham and CB for many years, Ive found there is nothing on Ham Radio that I cant do on CB Radio.

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad or antenna, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $125 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

Realistic Patrolman-6: Portable AC/DC Receiver with AM, FM, air, High/Low VHF and UHF bands. The radio works fine but the dial cord must be disconnected. Dial not moving. AS $15

RS Pro 30 Scanner: Hand held 16 channel scanner. Looks & Works good, but the battery cover plate is missing. Make me a reasonable offer.

I was wondering how high you really should have an antenna. I have an I-MAX2000 about 85 feet in the air in the pine tree and I think i receive excellent and transmit excellent. So what does everyone else think?

Just completed road trip in western US following years of overseas residence.
Traffic on Ch 19 seems much reduced compared to late 80's and early 90's.
Have "Smokey reports", chit chat and the like moved to other channels, gone
away some, or ?????.

Thanks

> > operators.
> >
> > That is the same reason that I gave it up.
>
>
> Ok, lets expand on this a bit. What is it about CB that is less boring
> than ham radio?

>>>>I have found that on the amateur bands, people want to act "professional", to the point of making sure that you ID every 10 minutes (who cares if I ID every 7 minutes, or 12 minutes for that fact. I positively ID when I remember too, and that is that), HAVE to talk professionally (I am destinated, Q signals on FM, etc., etc., etc.), and the ones that I really like, the light bar weilding public safety wanna-bes.

>>>>I ran chase for a professional bicycle riding team last year, and this is what I found, that REALLY turned me (and my Alinco) off..... I went up to the ARS communications facility, introduced myself as a member of one of the largest teams, informed them that I was running chase for them, and wanted to know the input and output of the portable repeater they used, or at least a simplex frequency. I was given the one finger salute, told that the information that I wanted was not being "given out to just anyone" and told that unless I was a member of the club, I was not supposed to be in the area of the Comm building.

So, fuck them. That is the general attitude of the ARS community in the Houston area. I got my ticket in Northern California, and had a BLAST!! If I go back to Callie, I will be sure to take my radios with me. The attitude here is that unless you pay your dues, pretend that your comms are ALWAYS life threatening, and act like you are a cut above normal society, you are worthless.

And no, I didn't let them see the double coil 11 meter antenna on my mobile, didn't let them know I even operated CB, and conducted myself in a professional manner in front of them. They where just ..... Assholes.

On a funny side note, though, they ALL wanted to see the suburban and the station after the ride.... It made quite a story as their "official" vehicles relayed info back to the "barracks" about this crazy antenna on the white suburban. A couple even asked about the radio setup, how I produced the power, etc. Kill 'em with kindness, and I introduced them all to the high power art in the mobile...

Incidentally, I did have an emergency to relay to them, about a driver that had run two people (cyclists) off the road. I found their simplex frequency and after 5 or 6 calls of distress, I finally got someone to reply. Yes, I did give my call each time, and yes, I did wait to see if their was traffic.

What can you do on CB that you can't do on ham?

>>>>Get along with people a lot easier. Cut up and have fun. Be myself, not have to worry about who is listening, taping and making memos of who to snitch on now for not IDing for 14 minutes.

To mention a few.

>
> The people with the "elitist attitudes" can be avoided.

>>>>Not here in Houston. They are everywhere. I tried, tried different clubs, different repeaters, etc. Good old boy syndrome, maybe.

You can easily
> recruit a group of friends to 2 meters or 6 meters, and have a ton of
> fun.

>>>>Yes, just like I have on CB. And it costs less, too.

You don't like appliance operators? Great! neither do I, but I
> don't let that affect what *I* do on the band. They do their thing, I do
> mine, there's room for all.

>>>>Your right... And I do CB while I am in Houston.

Don't quote books, since you feel so smart calculate the equation, and let us see how smart you really are, its obvious YOU think your very bright, well prove it.
Hey the next time you quote a book for an equation make sure you only include what pertains to it, I have never seen nor heard of a 3 phase incandescent lamp. and explain to me how you would get a one-way circuit to work. The 2 at the beginning of this calculation is for there and back calculation.

3234. Re: 2 antennas theory

Newsgroup: rec.radio.cb
Date: 1999-10-28 00:00:00 UTC
From: Jack Thurston <fire228@cybertrails.com>
Message-ID: <38189C05.1D9F76F0@cybertrails.com>
Source record: 7683

******

We weren't talking about swr. The comment
was made that 1/8 spacing was equal to 6 feet.
I was merely pointing out that 1/8 wave
spacing at 27 mhz works out to roughly 4.5',
not 6'. With regard to the antenna system
that I had mentioned, swr was never a
problem as the system was quite broad, as
swr never rose above 1.8:1 for 300 channels,
or about 3 mhz.

>channels without interruption.

Rick whether you beleive it or not the majority of the locals in the area of a keydown end up at the keydown, and are really in awe at the stuff, I have NEVER heard anybody on the CB say a keydown is stupid and useless.
now how would this interfere with them, they would be more upset if they posponed the keydown.

>There is absolutely no reason (other than
>stupidity) for _anyone_ to key a mic over top of an existing qso.

Rick there is no QSO unless it is DX, and they do not acnolidge us, or care for that matter, these keydowns are held on the quietest, clearest channel possible. I have never heard some one running a keydown tell some one to leave the channle that there was a keydown in progress.

>If it
>is an empty channel and someone is tuning up, fine. But dumping carriers
>on people?

It is an empty channel, or they will atemp to find an empty one, Ive even seen them wait on the truckers to pass through before they keyed. and how can someone be " tuning up" and you be OK with that but you disagree with keydowns,Why would someone be "tuning up"a CB? you dont always make yourself clear, Keydowns are not as bad as you think, Hell they are no different than street racing, and a lot less dangerous, I understand what your gripe is, I just dont know why you voice it towards keydowns this is not where the bleedover or freebanders are at, these keydowns are generaly the only time the equiment used in them is fired up.
I personaly think it should be treated like drag racing, ilegal in the streets but legal if held in a place designated for the event, I mean you dont think the people who live right behind the newly built drag strip enjoy the sound do you? but one thing is for sure it is legal if done in the drag strip and the people who live by it generaly come to enjoy watching the event.
I just think that people ought to lay off of the keydowns, they are not that bothersome.

Dave, there is enough "silent jamming", elitists, and other things
going on behind the scenes that it's pretty much equivalent to being
jammed directly.

Case in point.... extra class smoe 4 letter boy tells some guy
something about radio that you KNOW is wrong. You jump in and try
to rectify the situation and you later find out that the guy ended up
listening to the 4 letter retard and ended up blowing up his radio.

It's jamming but in a "polite" form. Is there any real difference?
No, the net psychological effect is the same. Hence why I avoid
pompous hams as well as the truely assnine CBers.

Some people have accused me of being an asshole at times.... which I
suppose is true. I beat up on people who come up on SSB and run echo
and a string of roger beeps. But at least I try to help them make
their radios sound better. We've had people jam us but we're above
that. Nobody jams our home anymore because we just outsmart them

before we outgun them. (but we're working on that too, just for fun.)
:)

The bottom line is both CB and ARS have shitheads and your only option is to avoid them and get the most enjoyment out of your hobby as you can.

Mike

I totally agree. Before most of our locals became hams, we used to have to develop plans to deal with the occasional butt-head that only lived to disrupt other people's hobby. It's ironic that many of us were driven to running illegal power or channels, just to avoid these low-lifes.

Hams have their pompous know-it-all, but generally speaking, you can ignore their ego's. They don't follow you around and disrupt your conversation.

although i am an out-bander, i have to agree with some of what you said but the
part about cb'ers crying is untrue.
there are no "laws", only "rules".
we are NOT the ones crying it's the rf police hams who keep crying in our beer
about our activities. when we choose to "cross the line", we take on the
responsibilities and consequences for our actions upon ourselves so who's the
one doing the crying?
the only negativities displayed here either come from the hams or are brought
on by the hams upon themselves.
these are the ones diong the crying, not us.
jeff

WHY I GOT MY LICENSE. BY MARTIN D. WADE
After being in CB for many years in the 70's and 80's I needed more versatile system. 27 MHz could not be used for calling home from Alaska, Only 40 legal channels, all noisy. (Try using an amplifier (PILL MACHINE) on a military base!). In 1989 during the Valdez Fiasco, I challanged the Novice Exam with 5 wpm (Coppied 27 letter straight before I skipped) so I had a Novice License with 10 meter priv. Calling home was no problem, direct communication with a ham in my home town (Neighbor) helped out.

Upgraded to Tech in Nov 89 to get a 2 meter FM in the Car. Great move, cell phone was just on the scene and costly, the autopatch let me call home form the Car or Rig. Not private but usuable and versatile.

Upgraded finally to Advanced in 1992 and don't have the desire to punish myself with 20 wpm. Amateur Radio-you can take it or leave it, your choice.

As for me, I am in the phone book and callsign database, try to not disturb the neighbors with TVI and strive to run a clean operation. Any radio hobbyist will tell you to enjoy whatever you like so long as you don't create problems, especially for the "Masses" who don't know the difference between CB and HAM, their reaction is to outlaw the whole bunch, both CB and HAM.

A license (in my life and personal experiences) has open doors with employers as showing a demonstrated ability, during a TVI inspection brought on by the cable co. I was able to demonstrated I WAS NOT the culprit (The cable TV co cable leaked). When I arrived at the Canadian

Border, my license allowed me to bring in all my radio gear (The Customs Man was looking for illegal CB equipment) and my license showed a professional side to the hobby.

Not all HAMS are boring, stuck-up or rude (or ready to call the FCC at the first sign of an 14 minute ID).

I own CBs too, my late father was truck driver and had CB before Smokey and the Bandit popularized it. In those days he could call across town to tell mom he was on his way. (He also had a 23 channel handheld he once spoke to aguy in Puerto Rico with on skip!) Too bad we can't return to tghe quiet usefulness of early CB, I really miss that.

To each their own.

once again, i agree with what you say.
the one thing that would concern me is any nut that has a short wave radio can

pick up a call book and get YOUR address and do bad things to your home.
i picked up a 1996 call book cd at a yard sale for $1.00 and i probably have YOUR address as well if you haven't moved in the past 3 years.
this is NOT a threat but if it's THAT easy to get your numbers off the air or the net and get your address, it would worry me. i wouldn't want my address and personal information spread world wide that easily where there is NO acountability as to who accessed it. even my phone number is unlisted.
at least, if someone goes through public records, there would be a face to face contact that might be traced should a crime occur.
i would not worry about the fcc as much as some serial killer or someone who may think they have a long distance bone to pick with me, getting access to my qth that easily.
we all make enemies or hard feelings with others wether intentional, accidental, or just by standing up for what we believe is right. it all depends on how the other guy handles the situation which, you must admit, can be a very unpredictable at times these days.
good luck.
jeff

Hi, I am looking for a Robyn T-240D tube type radio. I will send up to $40 bucks on this radio. Please email me and tell me what you have. If you like, I will trade a Cobra Ca-75 power mic plus $20 bucks. Thays equals $40 bucks. I'm selling the mic for $20 and given $20 more to equal $40. Email me if you are interested.

Thanks Buckaroo "223"

yeh i think kasupski needs a generous serving of poontang pie, of course he probably can't get it up anyway, so you get this tirade about cb radio. perhaps he gets some kind of cathartic response from this. oh well, maybe someday he will feel appreciated by someone, of course i know his wife appreciates him. he still can mow the yard and take out the garbage. and we cber's appreciate him for his wonderful posts to this ng, and the marvelous opportunities we have to squash this mudduck like a grape. that being said , i think i need to go to the john and take a big kasupski,.....icm out.....

It doesn't take anywhere near 200Kw to make 100Kw output.

It takes somewhere along the lines of 130Kw to produce 100Kw, as deep class
C as these boxes are biased.

Even in the city, during heavy skip, you should get out more than a block. Check your radio and antenna for proper operation and condition before you run out and buy a linear. Trust me...if you cannot get out a block with 4 watts of power, your radio or your antenna is not working right.

3274. After many years....

Newsgroup: rec.radio.cb
Date: 1999-10-28 00:00:00 UTC
From: Greg Miller <greg@millerweb.com>
Message-ID: <0f5S3.130$Na1.16895@nntp1>
Source record: 7723

I'm back into CB. This is why....

My wife and I commute 80 miles a day on Rt. 80 in NJ. One day recently we were in a real parking lot, we just sat there (usually we are at least moving). The radio reports said something about a rig and some cars trying to be on the same piece of asphalt at the same time. At about the two hour mark, she rolled down the window and shouted to the rig next to us "how long will it be?" He said, "3 minutes".Yeah right!

Three minutes later we were on our way. I looked at her and said, "it's time for CB", and she agreed.

The next saturday, I did the usual, "I went to the Shack". I picked up a relatively small, but featured (RF gain) number for $79 and an antenna for $14. We were going to Foxwoods in CN for the weekend+ and it was another world being able to listen and yack with the rigs (she talks, I drive). When I got up there, the next day I found a local Shack and got a fiberglass whip that gave us better reception on the way back.

A week later, heard about Buzz Brothers, located off of Rt 15 in NJ, just south of 80. I popped in there and it was TOYLAND! Intending to get "just" an antenna, I walked out with a K40 and a Uniden PC68XL. The install in the Cherokee was a snap and the whole deal was under $200. Other than awesome reception what's nice about the mag mount K40 is the "twist-off" coil and rod so that you can get into the garage. The radio is as close to DFQ as you can get on 11 meters. Ken at Buzz told me the secret is turn squelch to 1/2 and ride the carrier with the RF gain.

One other comment. We find the "drivers" about 85% professional and polite. We're doing this every morning and night during weekdays and there have been VERY few idiots. Swearing and bitching is no big deal and even the best of them (and myself) do it, but it's done only as a natural human reaction to both 4-wheelers and rigs that are doing stupid human tricks. Further, my wife, who is blessed with a wicked sence of humor, and surprising witty drivers, leads to an enjoyable commute. So rather than just sitting in traffic, in your box, pissed off, you can interact with humans in the situation, and that is what it's all about.

"c'mon"

Couldn't agree more. Add to that that the Internet, as awesome as it is, is also the greatest challenge to privacy in the history of humanity. 1800search.com... if I know ANYTHING about you, I can search public information databases for a small fee and learn almost anything about you. In the past, one had to hire an expensive PI and it would take some time. This is a bit OT, but radio is not really an issue about privacy compared to the net. I think the plus side is that this reality tends to make us more sober, more responsible, less challenging, and more tolerant.

None of this is going away, the dam is broken. With universal access to information ("knowledge is power"), the game has changed, the rules are different, and one's beheavor and actions must accomidate.

It's the best, and worst, of times.

Greg

Why is it important to purchase a matched set:

1. The transistors are matched for gain curves
A. This means that each transistor will put out 100 watts for 10 watts in, 50 watts for 5 watts in, etc. Otherwise you can end up in an unbalanced situation, with one amp block, or one transistor in a pair causing problems.
2. The transistors will draw the same quiescent current
A. This means that that each transistor will draw the same amount of standby current, and that translates into each transistor will be operating in the same class of operation.
3. Equal current distribution
A. This means that you will not have any hot spots.

The list is long, but these are 3, right out of the gate. Yes, the matched set is a little higher, is not <<always>> necessary, but I ALWAYS do it with class AB SSB ready boxes.

You can run a non-matched set in a Class C box, due to the smaller duty cycle, but I don't recommend it.

Michael,

You are full of shit.

Please see below:

> We will be happy to repair your amp for you,

And judging by this post, he would be lucky to get the thing back working at it's optimum level.

> but as a do-it-yourself project, you need new torroid coils,

Bullshit. The curry temperature of the torroids would have to be extremely low for this to happen. If you really knew amplifier theory, you would understand what the amplifiers problem is, and tell the guy what to do to fix it.

> don't wind them yourself(rfparts.com)

Why? It is easy. Pull the old windings off. Get a length of teflon or hi-temp wire, and cut it to the same length as the old piece. Then, rewrap the torroid. Takes a grand total of about 5 minutes. Rocket science, it is not!

> also, your "pills" are almost deffinately fried, check them like you would a
> diode, or use a transistor checker, either way,

You can use a simple go-no go. Judging from what he has told us, the base emitter junction is most likely fried, although it could be the CE junction. Remove the base from the PC board, take the positive lead of a DMM or VOM to the base (connects to the small transformer) and the negative to the ground plane of the amp (connected to the case and the ground wire). Take note of the reading. Now, reverse them. This should be done in the "Diode check" mode, or RX10. If you saw a deflection on the meter in both ways, you have a leaky transistor. If not, and you get 600 ohms resistance (or thereabouts) one way, then your transistor is probably good. Check the collector to emitter and collector to base the same way.

Also, their should be a 10 ohm resistor from the base of the transistor (where the small transformer is connected to the "pill"). This is likely fried, and where the smoke came from.

get the matched quad from
> rfparts.com,

Or wherever you can find a good deal, although RF Parts is my recommended company to purchase from. They have been in business (and where in the amp business... Pride Electronics / Palomar) for more years than a lot, and can be a big help, if you talk to the right people there.

and make sure to re-bias the new transistors when you install
> them,

1. The Palomar amplifier he has doesn't run bias in 90% of the chassis I have seen... Like the Boomer Deluxe models. You should know this if you are an amp mechanic.

2. If it does (rarely, I have seen some that do), then their is no way to adjust the bias on the thing. That was a good thing about the rangemaster / commander / Palomar DX and 300A / 250A solid state amps. You could adjust bias independently for each pair.

they won't be exactly the same as your previous configuration,
> unbiased means heat, and heat is of course bad.

No, actually, unbiased means less heat, as the transistors are conducting class C.

You knew that, right?

>
> And in the future, the Wilson has the metalic foil on the bottom of the
> antenna for a reason, that's your ground, ungrounded means high SWR, and
> hence..heat.

That should read "hence.. High standing waves".
High standing waves means high voltage reflected, which means that the currents in the amplifier rise, and things start to go pop.

The other thing to check is the combiner... That is a large torroid that combines the 2 banks of two transistors. It is usually paralleled by a single large resistor (50 ohms) or 2 (100 ohms). When you lose one transistor, this is likely to go.

Your amplifier broke into self oscillation (which is common, believe it or not). That is from high swr causing feedback from the output to input. Chances are you fried a couple if not all transistors, and the 10 ohm resistors to base, and the 50 (or 2X100) ohm resistors across the combiners.

Total of all the parts needed is about a hundred bucks from RF parts. You can use a MRF455 for the driver, and a pair of MRF492s for the final transistors. The 2SC2290 will also work as a good final.

Hope this helps.

junk the k40 get a center loaded or top loaded antnna
with a 26 1/2 inch tall 29.99$ RS center loaded antenna
i can talk 15 to 20 miles when the band is clean
when the skip is roling in i can talk about 10 miles
i have found look alikes of that antenna for 10$ to 15$
with the same performance
and the radio is a stock trc-422 and no amp
talking to the base station that has a home made
ground plane up 30 feet with a stock trc-433 and no amp
and a 120 feet of rg-8u
from another moble which is a minvan with a center loaded
4 foot tall antenna with a stock road master or somthing cb
with no amp the range is about 10 to 15 miles and about
6 to 8 with the skip roling in from moble to moble

You should be able to talk miles without problems, apparently you have a problem somewhere. Check the antenna with a SWR meter, a cheap unit from radio shack will do (under $ 20) and you will use this thing many times in the future, There could be other problems but I would start here.

Hello Tim: Yeah I hear ya. But where ah gettin low on trolls. The entertainment value is running low, not to many left.

I like when the trolls say something like: "When all the linear amps are gone CB will be a better place ect ect." Totally forgetting that CB is on a very skip rich HF band. I have a old tape recording made in 1962, on CB channel 5, the old Jolly Roger from Jacksonville Florida talking to all the Big Strappers out on the West Coast of California. The Jolly Roger would say he is as bear foot as old Huck Fin! True American CB Folk Lore.

>
> 1. CB is less formal (eg callsigns)

What's the big deal about call signs? They're really no different than a "handle". I can understand the reason why many people didn't use call signs on CB when they had them, because it's stupid to run illegally, and then give out your call sign, which is an invitation to come and get me. But if you're running legally on ham it's no big deal.

As for formality, that depends on the people in your area. I'm lucky that there are a bunch of loose, fun loving guys that clown around and don't take the hobby THAT seriously. We do what we can within the rules, and there is a LOT of latitude.

>
> 2. CB is more diverse (More CB radios mean more individual personalities
> involved, good and bad)

Agreed. But it's double edged sword. Easier to get on, means that for every unique interesting person you find, there are at least as many low-life dirt bags. Working for a ham ticket, may scare away the casual talkers, but it also keeps the riff-raff at bay, and allows those of us there, to have virtually interference free QSO's.

>
> 3. CB costs less

Maybe. But not always. It depends on what you want, where you are, and how lucky you can get. You can get on 2 meters with less than $100 if you're willing to buy used gear. And modified CB's will work on 10 meters.

> 4. CB is less likely to be monitored by someone who thinks they were
> knighted a radio cop.

Hams that "police" the bands do so because they want to preserve the order that is there. They know what CB is like, and don't want the hams bands to go the same way. I approve of monitoring for ILLEGAL operation, but those guys that try to censor CONTENT, go a little too far. Fortunately, I don't see much of that (Since I stopped using packet, that is).

Cbers, that can't handle a little restraint and radio discipline, are probably better off not becoming hams, since you will likely turn off many people.

>
> 5. CB is time tested. The CB band behavior hasnt really changed in the past
> 30 years. Look whats going on
> right now on the Ham bands. (eg 20 and 75 meters)

This I disagree with. I've been on CB for the better part of 30 years, and I can say unequivocally, that the bands have gotten MUCH worse. In the early to middle 70's, unless someone was really drunk or pissed off, you never heard anyone swear on the air. There weren't many "noise toys", people generally respected other people, and managed to co-exist peacefully. There were a few clowns and agitators, but they were much fewer than they are now. Power amps were also not in big demand, and if you had 100 watts your were king of the mountain.

But the degradation of both the CB and Ham bands is mostly a reflection of our declining moral standards as a society. Radio is merely a mirror of society in general.

>
> 6. CB equipment is much more easily acquired. (Theres more Radio Shacks than
> there are HRO's)

True, but I consider that a plus. If every K-Mart sold ham radios, there'd be more bootleggers.

>
> 7. CBers are much more open to different opinions. (Try going on 80 meters

Try telling a "good buddy" that his echo mike sounds like dirt, and see how he responds.

Agreed. Some of my most favorite friends on CB were totally non technical. And let's be perfectly honest, there are more women on CB as well ;)

This is why I stay connected with CB. I've always had more fun on CB than ham. But ham radio fills the bill when the CB becomes too intolerable. It's a "safety valve", to quench my radio hunger, when Cb can't cut it. But as a long time Cber, I despise what is happening on

the band. I want it to be like it was in 1975. It's probably not going
to happen. Society has changed too much for that.

Well, as they say in the real world, "you get what you pay for". CB is
easy to get on, you can find many different kinds of people. But you
have to deal with the undesirables as well as the friendlies. Ham radio
requires more work, but you get the benefit of less interference, and
more reliable communications over longer distances. One of the local 6
meter repeaters has a 100 mile radius coverage area. I can't do that
reliably on CB. Our 220 repeater covers from my house down to the
Chesapeake bay, where I boat (100+ miles) If the wife needs me, she can
get me. I couldn't do that with CB.

> Radio.

Legally, that is untrue. But even disregarding part 95, there are still
things that you can't do (well) on CB. You can't have reliable long
range local communications, since the band is subject to DX, and
man-made interference. You can't experiment with high tech modes, unless
you can find another CB "techie" to play radio with. The frequency band
limits the practical size of the antennas that you can run. I've got a 2
meter beam with an 18 dbd gain. For a CB antenna to have the same gain,
it would have to be over 100 feet long.

So..... What you're saying in essence is that since we have this crime
and that crime, that we should all throw in the towel, and give up? The
heck with trying to better ourselves? Yea, maybe we can't stop drugs.
Maybe we can't stop violence. But we CAN make a difference in how we
treat people. Why do you think there is so much violence? People just
snub each other. If we took the time to be a little more friendly, maybe
the other guy would reciprocate.

I just love defeatist attitudes.....

>voltage drop in THAT conductor (thin air).
There is no voltage drop in that, and you will not kill file me, you are to interested in what I say smart ass, you still have not shown the answer to the equation, And your hourly income does not impress me, that is merely chump change to me.
And I still would like to see you solve the equation (in a simple manner). you do not need any charts to solve this equation, all the specs are there you simply need to rely on your ohms law pie, what more do you need? and I like the way you tried to clean it up with the one way circuit attempt, give me a break. You are once again feeling inferior to CBer's, which is a frail attempt but at least your trying. Man you dont have a man in your family if you cannot show the answer to this simple equation smart man.

P.S. don't use the kill file cop out so you dont have to answer the equation, don't be afraid to make mistakes everyone does from time to time. This kinda proves the theory of "Its better to be silent and thought of as a fool,
than to speak and prove its true" especially by a bunch of dUmB oLe cBeRz!

When I talk about cleaning up CB, I've checked my ticket at the door. I
am speaking as A CBER. Why is it so hard for you to accept that there
are other CBers, who don't like the way you lawless guys run? It's not
just the hams. In fact the only hams that care are the ones (like me)
who grew up on CB and still use it (When it's not overrun by morons).

You try to deflect the real issue by creating an enemy (hams) to rally
against. But the truth remains. There are people (CBers) that are
getting sick and tired of having to deal with self-centered, arrogant,
anti-social people, who care nothing for the rights of other Cbers, and
who openly flaunt it, as some sort of invitation to "do something about
it". I don't know what abuse they've had to take as a child, but I, and
other people, don't need to deal with the after effects. If you want a
toy, go buy a Nintendo. Radio is to communicate with.

This is exactly the reasons that I left (or reduced) my CB activity. I
didn't leave because people run amplifiers or freeband. I left because
it got to the point that you could have a decent conversation with
someone, without some mental midget jumping in trying to aggravate you.
Or other people, who's sole activity on the band was to announce, to
anyone unfortunate enough to hear them, just how great they thought they
were, and how much better they were than the "mud ducks" out there.

No, the problem transcends Cb radio. The problem is in society itself.
If you live near major cities, it's probably worse than if you live out
in the "sticks". The problem will most likely not get any better unless
something radical happens to change people's attitudes. The FCC can
start busting a few people, but the great majority of A**holes, will
still be out there spoiling it for everyone else.

I wish harry was around here, I'd send
him a nice Cuban Robusto for a great informative post.

On the other side of the spectrum, Larry Ellison
(CEO of Oracle) wants to have the laws on flying
into San Jose International after 11:30pm. changed. I quote
"that's a stupid law, no one can tell me when and where
I can fly" But the city said, " the laws the law, no
matter how rich the individual is" $100.00 says he gets
the law changed.

I don't let anyone tell me how to speak. As long as I abide by the
rules, the content of my transmission will be in MY style. At one time,
I'm sure that this "nonconformist" attitude, would have gotten me
black-balled, by the "HI HI" hams, but I'm lucky that we now have a good
amount of upgraded former Cbers, that aren't so rigid.

So much for friendly. You happened to get involved with self-important
assholes. Not all hams are like that. Steer clear of the "public
service" types. They're the ones that couldn't become a cop, so they're
trying to live their life as "Sgt. Joe Communicator", complete with a
bad attitude.

>

Right there, you can see the difference between communities. It's the
same on CB. Some areas, are ok, and others are choked with idiots.

I do that now on 2 meters, 220 and 6 meters. Again, I guess it all
depends on your area.

"5 landers" are tough. They seem to be very "cliquish". It's hard to get
into their HF roundtables. As a "yankee", it's even tougher.

>

A 4 watt CB and a cheap antenna maybe. But I'm sure what you spent on your gear is at least equivalent to a typical ham station.

I have always loved when operating on repeaters
that you paid, and we're authorized to use. You
some how pissed the owner of the repeater off, I
mean by experience, said something wrong, didn't give
you're sign often enough for his liking, made a joke
that he didn't like, talking with loud baby in
background, just plain better person than him, and
such. So what does he do, turns it off.....
What a fucking dick. But that's ok, I have programs
that crack the codes so that I can use it, or any other
when I want.

(not aimed at jeff)
I can always talk skip on SSB. There is no challenge in that. Kaputski can use all kinds of clear frequencies, have a band to skip on 24 hours a day, use all kinds of modes and power to his heart's content; but would rather waste his time whining about a two pill mobile talking skip on regular 40 CH AM. When I'm shooting skip, there is too much noise to talk local, and all the locals turn it off because you can't talk to anybody local anyway. As far as wiping out a local, I know what channels are used in my area. In an urban setting, if you can't hear any neighbors on your radio with an S30 noise level, you turn on the stereo or shoot some skip.

Late at night, when it's quiet out, it's much more exciting to hear the local idiots cuss and fight than listen to some stiff shirt on a VHF/UHF repeater. It's also more fun than the crap on 3910 or 14313, if just for shock value!

Maybe one night I'll tape some and put it on RealAudio and you can tell me if you've ever had this much fun on radio!

Ok here is my setup. I have a Cobra 29WXST with a K40 antenna mounted via magnet style to the roof of my car. It a 4 watt radio so I have alway used the 1 watt per mile gauge. But after reading some of the postings I think I might be under estimating it a bit. Right now I have to tuned pretty close to an exact match with the antenna. I get around 2 1/2 miles of range which seems like I am getting the short end of the stick when is comes to the range of my radio. So thinking this I took it to a CB shop and had it checked out. After $20.00 the guy told me the radio is working fine. So is it? I know someone will have two cents to add right?

On Thu, 28 Oct 1999 13:34:05 -0500, "DR KAVORKIAN" <32pills@yahoo.com>
wrote:

>Don't quote books, since you feel so smart calculate the equation, and let
>us see how smart you really are, its obvious YOU think your very bright,
>well prove it.

I'll perform NEC calculations for you when you pay me $22.50 an hour
to do so. That's what my employer pays me, that's what you can pay me,
otherwise do it yourself or find someone else who is dumb enough to
work for nothing.Otherwise, I have better things to do with my time.

Your original statement was:

>>>Lets just see how smart you really are, I bet you cannot answer this or
>even
>>>reply to it dumbass.

Well, I did reply to it, and replied with the correct equation that
one would use to perform the calculation - IF, that is, I were
interested in playing your stupid little game, which I am not. I've
demonstrated that I have the necessary knowledge, that is as far as I
care to indulge in your nonsense...and anybody in this NG with the
intelligence to understand the subject can see that.

Face it, Kadorkyman, you attempted to pose a question I couldn't
answer. Your attempt failed. You thought I would have not even the
slightest clue of how to proceed with your question, and instead I
came up with the exact formula used to perform calculations of that
nature, and you can't handle it...so now you are reduced to whining
and sniveling and trying to change the subject and gripe about
parameters YOU specified in the first place.

I knew EXACTLY how that problem would be solved. I just don't have
ampacity charts handy, nor specs on the cross-sectional diameter for
various sizes of conductor. If you want to pay me the going rate, I'll
make the effort to hunt down that information and give you your
answer. Otherwise, go take a long walk off a short pier.

You belong in the kill file with Headless Harry.

>incandescent lamp. and explain to me how you would get a one-way circuit to
>work.

In this example, we don't, we merely specify that we use the one-way
circuit length in feet for the value of I to eliminate the possibility
that some lamebrain like you would double the length of the conductor

to compensate for the fact that the current flows in the opposite direction every half-phase...which would be incorrect since we have the 2 multiplier in the equation - as you yourself pointed out in your next sentence, nitwit.

> The 2 at the beginning of this calculation is for there and back
>calculation.

However, just for the record, a one-way circuit is not out of the question. Ever looked at an infrared remote control circuit? You point the optional IR remote control at your Drake R8B receiver, you push the POWER button, and voila! The radio comes on! Ah, the wonders of modern science, eh, Kadorkyman? And let's see you calculate the voltage drop in THAT conductor (thin air).

73 and good DX'ing,
John D. Kasupski

Well, I'm not sure yet whether getting my ham ticket was a mistake or
not, it just wasn't what I had planned for that day. Now that I have a
no-code tech, I am starting to learn the code, though. As the saying
goes, when in Rome, do as the Romans do....

>just barely passed the code.though....by the way I also got a Sonar
>endorsment. why? because it was only one chapter in the book and I was
>bored the night before the test. man thats just what i needed, a sonar
>endorsment in N.W. Arkansas ha ha...

Well, you never know. I used to know a guy who lived in Florida who
had a radar certification that he never used. Six years later he moved
to Kansas, started looking for a job, and ended up landing a position
with Cessna Corp. who hired him primarily because he had the radar
endorsement and they needed someone with knowledge in that area. Now
he has the best job he's had in his life, and all because of a piece
of paper he spent six years believing was useless.

It never hurts to learn something, even if you think you'll never use
it. That's why I'm currently working on learning the code...I have no
interest in it now, but then, prior to September 18, I had no interest
in ham radio either, and now I have a ticket. You never know.....

this proves my point to a tee. the ham / rf police get on and start with their
smart, read dumb, ass condemnations about out-banders instead of trying to
"elmer" them into compliance in the spirit of a true ham.
then to top that off, you have a "good dxing" wish after every post and promote
these activities.
you need to get your shit together as to which way you are going and stop
giving the REAL ham elmers a bad reputation.

>
>And there is is in a nutshell. It's not the amps. It's not the freeband.
>It's the ATTITUDE.

exactly!!! it's the ham / rf police attitude here that gets such a negative response from the cb'ers.
it has been written on this ng that some hams left cb because it has become a "sewer".
if this is the case, then stay off from cb and this ng and allow us to wallow in our sewer until it splashes into 10 meters. then, and only then, do you have the right to come in with a mop and clean things up.
hams have so much unused spectrum that they could use instead of tuning into the sewer but they don't until some commerical interest threatens a piece of that spectrum,then they rally around the flag like the first patriots to defend it to the death. all we are allowed is 450 khz of spectrum and you feel the need to crowd in here with us.
is there something here that you want that your not getting on your own spectrum or are you just here to stir up the shit on the bottom of the pot?

>If your first reaction to this post is to say "F* you",
>then you have it and are part of the problem.
>
here we go again with a ham trying to control us and what we say.
if i were to say "F" you to you, it would not be for your definition of part 95 as it is essentially right. it would be for your, and other like minded hams, trying to control us with threats of turning posts and e-mailings over to the fcc and other such things.
the fcc couldn't do anything with them as there is no law / rule against publicly speaking about radio mods or linear amps. the first amendment guarantees this. this is why you can openly buy instruction books on the subject. otherwise the fcc would be guilty of censorship. first amendment strikes again.
the big shame is the people who worry over these bullshit scare tactics that the hams try to bully us with because they don't know their constitutional rights enough to know that the rf police are just blowing smoke from a shit fire.
>
>There is a good passage in the bible that basically says to do on to
>others, as you would have them do onto you. If people would respect the
>rights of others, and not be so self absorbed, and self centered, then
>there wouldn't be this mess on CB

this is also true of the self-centered hams out there who think they have a God given right to control other peoples lives.
slavery is also in the Bible but if someone tries to enslave me, one of us is

going to die.
this is not a threat to you or anyone else but a demonstration of my right NOT to be controlled by someone who has ZERO authority to do so.
an amateur license ONLY gives one the authority to communicate over amateur frequencies and, to a certain extent, police THOSE frequencies.
nowhere is it written that a ham can police cb other than those remidies afforded any other citizen which is to complain to the fcc directly.
bitching here on this ng will get you nowhere as you are on the wrong turf.

if 40 channels is so limiting, why are you here in the first place.
maybe some find am dx challenging.
apparently a challenge you're not up to.
just like sucessful physically challenged people. they don't stop at their
limits, they learn to use what they have to the fullest. just like am dx on cb.
instead of sitting back in the ole' easy chair and letting the repeater do all
of your work for you, get on and try it some time. you may find it interesting
while standing on your own two finals.

>
>Remember, for every yahoo that you try to work skip with, you are
>interfering with local communications in both your area, and the areas
>that you "skip" to.
>

and while we're on the subject of skip, if you and i are 5 blocks apart and you are talking local and i'm talking skip on two different channels and the skip is rolling at that time, you too will be interfering with someone at the same distance that i'm getting on the same channel as the one you are talking on. it happens to all of us, even at four watts out. skip is like an explosion. it goes off in all directions and, unless you have a beam, it's impossible to control. then with a beam, you're going to interfere with someone because your efective radiated power is much higher even with a four watt feed.
i've seen times during the last solar max where i couldn't hardly get across the street but when i cq'd the interfering station and exchanges of qth and equipment reports, many times they would be way beyond the 125 mile limit and barefoot to.
remember, during hot skip, you almost have to call break channel across the continent to be TOTALLY courtious to everyone on the channel.
under these circumstances, your arguement is a moot point.

to be honest, i have to agree with this post but just as a point of fact, if
all of the gutter mouths, linears and all of the other things that you find
objectionable were to disappear tonight, the band would never be as it once was
because of the proliferation of inexpensive cb's that flooded the market.
the first cb that i actually owned, i bought back in 1972. it was a 2 watt, 3
channel midland walkie talkie and, yes, i didn't have a license to use it then
either.
i paid as much for it new as a low / mid grade rad shack mobile costs now.
the comparativly high cost of a cb then coupled with the requirement of a
license kept the population low back then.

now, since they dropped the license requirement, there is a chicken AND a cb in every pot. on top of all of this, we are comming up on another solar max, even at 4 watts, and if the predictions hold true, skip will make the "legal 40" unbareable again.

then we are all children. in case you wern't reading the war that was going on
for the past several months, i had several admitted hams attack me with
generalizations and, as you put it, mudslinging.
i retaliated in kind in harsh ways. some mud of my own but more with legitiment
questions that they would not / could not answer because either they had no
answer or the answer would force them to admit that they were wrong or to admit
that they had ZERO authority to come here and tell anybody what to do.
they either didn't have the balls to answer the questions presented, totally
ignored them or side-stepped the issue all together.
from what you are saying, if someone "shoots at me" and i shoot back, i'm
wrong. if i lay down for them like a "good little boy" it's all right???
I THINK NOT!!! that shit's for the birds.

>Who started it is irrelevant. It takes a much bigger person, to just say
>"Sure, whatever you say" and go about your business.

that's what most of Europe said to hitler.>The one sure thing about the human race is that we're all different in
>one way or another.

this is true, so leave us in peace with our opinions and we'll leave you and your 10 ham-related ng's to your opinions.

>But as long as what you are defending is
>purely subjective in nature, then you have no more "rights" than the
>other guy does. It's all based on opinions. We all have them, and
>they're all equally valid or invalid

bulls eye. this is what i've been trying to get across to the rf police for 6 months now.
it is OUR opinion that what WE do on OUR band is OUR business and has validity for US and what YOU do on YOUR bands is YOUR business and has validity for YOU. WE don't have a right to tell YOU how to run YOUR lives and in turn YOU don't have a right to tell US how to run OUR lives either. YOUR opinion, to US, is invalid and OUR opinion, to YOU is invalad. inother words, stalemate except you are on a CB news group where these things are going to be discussed. if you want to bitch about it to agreeable ears, go to one of your other ten ham-related ng's and bitch there.
if you haven't noticed, nobody here is really listening to what you have to say. we are just wasting a lot of time fending off butt-inski's like you who spam this ng with a bunch of shit that no one here is interested in hearing except those of like mind to yourself.
it's like the situation of someone throwing a party and the crasher gets ignored. usually, the unwelcome ones get the hint and leave but the rf police are like the energizer bunny. they just keep going on, and on, and on...

>Someday, that "dork" may save your life, or may be the guy you have to
>interview with for a job, or to get a mortgage at the bank.

i'd rather jump or live in a cardboard box than work for someone like this. not so much the "dork" part, but i really have a hard time staying around someone who thinks they have the authority to control personal aspects of my life. my boss can control my work related time, my mortgage holder can control when i send in my payments, and i would be grateful to the guy who saved my life but not enough to kiss any of there asses over my personal time or activities.

Your freq counter is designed to shut off when the the switch is in the NB+ position.
Locate C49 which is in the back left corner next to TR17. Unsolder both leads of C49 and resolder the cap flush to the pc board. The leads are too long on C49 and can cause the 20+ noise signal you are seeing.

Let me repeat: I said that "it's obvious you know nothing of HF propagation". Sitting on 3.950 and 14.313 just waiting to hear off color language and bad behavior will give you a very narrow view of what the ham bands are actually capable of, and will teach you nothing about propagation.

<< as a life long shortwave listener and general radio hobbiest i know a little. are you denying that 14313 is full of ass holes cussing during the day>>

Truth is you really gotta be a dedicated 24/7 listener to catch the antics of the few troublemakers on 14.313. (But maybe that is what you are looking for??) Most of the day 14.313 is "full" of maritime mobile stations and routine net operations.

<<or are you denying the fact that 40 meters is full of annoying ass shortwave stations or are you denying both???>>>

DSP auto notch works magic on SW heterodynes. 40 is a geat band. Guess you wouldn't have known that, since you don't actually *use* 40 meters.

No, I was passed this URL by a fella over you're way who I'm
corresponding with regards a class-S PWM modulator for this class-E PA
we've finished.

True to Raab's design we've now seen 700+ watts at 100v with 92.5%
efficiency!

All you need now is some FET's that do the same job at 27MHz.

Phil / UK

With few exceptions, all Realistic CB's use the same mic. See
http://www.copper.com/mics/Realistic.html
for details. In the 2000 catalog I see:
Dynamic mic 21-1172 19.99
Noise cancelling 21-1177 29.99 (not worth it)

Best thing is to wait until Saturday and/or Sunday and hit flea
markets and yard sales. Hamfests after that. Be prepared to see
funny looking people with many antennas sticking out from their
bodies <: I've picked up several D-104's for $10. You might find
a complete classic base station for peanuts. Just wipe off the dust!

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or
Fax me with the tubes that you are looking for along with the quantify of each
needed. I will check my inventory and advise you of current availability and
cost.
In addition, I also have a very good selection of tube testers, tube caddies
and good used CB/HAM equipment. Please contact me regarding you needs.
Thank you for your consideration.

3354. Re: amp efficiency

Newsgroup: rec.radio.cb
Date: 1999-10-29 00:00:00 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <381954AC.F01214A9@netzero.net>
Source record: 7803

Amplifiers are nothing more than sophistocated power converters.

For example, most all of them convert simple DC power to complex
AC power.

Efficiency relates to what is lost in the convertion. For example,
lets say a particular amplifier draws 10 amps at 10 volts DC. That
amounts to 100 watts that's DRAWN by the amp. The output of the amp
in our example will be less than 100 watts because some of the power
is LOST in the conversion from DC to AC. In most cases a 50 to 70
percent conversion is all that can be expected. That means that out
of the 100 watts of input power only 50 to 70 watts of output power
will be realized. The rest is wasted as heat in the convertion pro-
cess.

It all amounts to simple mathmatics. If you can understand the
concept of output power versus input power based on the efficiency
factor, you're ahead of the game.

Mr. Stewart,
I agree we all have to be responsible and accountable for our own actions. I don't think I said the FCC is foolish but they are under-staffed. Some of the "Guests" in this NG refer to Mr. Hollingsworth as a Messiah. To each his own. I feel as long as you are on record with the FCC you are subject to a good deal more scrutiny and issues with other Amateurs. I may be looking at this wrong but if I were to talk out-of-band today and, you tell me I shouldn't do that and explain why, haven't you done your job? Anything after that is crying.

Without rigid policing (both self-policing and policing by the
> FCC), a misguided person, out for mischief, could cause a lot of serious
> problems for a large number of people, including those on other radio services.

> countries around the world.

This is where I have another problem. I can see the tarnished image not only in the rate of growth of ARS but also in the quality of it's operators. Where I live it is the same as CB. I still hear Profanity, fights, racism, jamming, deliberate destruction of someone's equipment (Someone over-heated a repeater?!) and excessive power. I don't think this "Policing" thing is very effective. You see, Mr. Stewart, your side of the street is still dirty. If it is not working in ARS how will it work on CB? Every 3 months or so someone I know somewhere in the country gets busted. At that rate we would not live to see many of the channels and stations cleaned-up.

131, In general amps, of a given type will exhibit similar
efficiencies. Class C amps are the most efficient in terms of power,
but are non-linear. Not really good for AM or SSB, but fine for FM.
Class A amps are the least efficient in terms of power but are the best
in terms of linearity. Most compromise and run Class AB or AB1.

Bill,
>That's brave talk--too bad Phil lost himself in the mire of 160.
What's brave, the figures or 160?

I thought they'd closed down LORAN navigation system?

Now even you can here my mobile on top band.

Just pick your time as long as propagation's switched on.

I have no command over band conditions, unlike some of the ch 6 op's.

Phil / UK

For sale : one year old 40 channel CB radios,have been used lightly.IN PERFECT CONDITION. Handheld. They are Radio Shack TRC-225,to anyone who might know what those are. They have removable antennas, volume control knob,a high/low power switch, and a squelch knob.Digital channel selection buttons. Lights indicating low battery and talk use Feature a bright green LED display which can even be dimmed to conserve battery power. The two radios are identical and operate at 5 watts. I bought them during a storewide sale for $80 each. I will sell the pair for $ 100.

Its not so much the call sign per se, its the timed identification
requirement itself. We have some characters on the Ham bands up where I live
that will actually tell a person when their 10 minute ID period has been
exceeded.

Dave, the KEY word in your statement is the word "MAY". All the Ham ticket
does is seperate those with a desire for some sort of electronic education.
It does nothing for skimming personalities. Hell, the Tech License itself is
70% FCC Rules/Regs and 20% Practical electronics. No-one has ever walked
away with a Tech ticket and was able to build a radio from scratch. Much
more individual in-depth research would have to be done on the Tech
licensees part in order to accomplish this endeavor. It is a fact that the
Ham ticket does not weed out arrogance.

I would rather have fun with a jovial CBer who knew very little electronics
than I would a smart-assed, opinionated Extra who could build a world class
radio.

> > 3. CB costs less

But not everyone can have access to 2 meters and 10 meters (Legally). My
point was that in about 2 hours a 12 years old kid can have a CB station up

and running for about $100 with a quick stop-over at Radio Shack.

> > 4. CB is less likely to be monitored by someone who thinks they were

> but those guys that try to censor CONTENT, go a little too far.
> Fortunately, I don't see much of that (Since I stopped using packet,
> that is).

This Newsgroup is a prime example of my previous comments. A Ham on this group (who has already been identified) started cross-posting CB amplifier issues on the rec.radio.amateur.policy newsgroup knowing full well that this dialogue would irritate some individuals on that group (It takes that personality to know that personality). Then, all the Radio Rambos showed up here with their swords swinging.

Hams have ALWAYS had the tendency to believe that CBers are subordinate to them and it is up to them (Hams) to have a quasi-authority to enforse such rules

> you had 100 watts your were king of the mountain.

In 1970 you couldnt ride down any street in my nieghborhood without seeing at least 5 CB antennas. For every 5 CB antennas there was 1 that had a "HAM supplied" amp hooked up to it. It wasnt the CBers who started selling all of those D&A and Swan amps to other CBers.....it was Hams.

Now, I can count on 1 hand how many CB antennas there are within a 1/2 mile radius of my house. Noise toys are more prevelent than there used to be however there are less CB operators (at least where I live). Years ago just about all 23 channels were dominated by individual groups within a 10 mile radius of my location which made for some interesting conflicts.....At present there are about 11 channels out of 40 used by locals.

Yes but that same "Good Buddy" wont be taken very seriously by the FCC if he decides to complain about the dialogue taken on that particular CB channel. The FCC is currently conducting an investigation on 75 meters because of the opinions generated by some Hams that other Hams dont agree with.

There is no arguing that there are some physical benefits to the frequencies
used by Amateurs in relation to the CB frequencies

Legally, you're right, however from a reality standpoint I beg to differ. I
work US and European Packet up in the Freeband all of the time as well as
phone FM and SSB. I even have a Yaesu radio that can act as an FM repeater
on 11 meters (If I wanted it to). The only thing I haven't done on a
consistent basis on CB is CW. This is because I haven't found anyone out
there to respond back to me while using CW on CB.

I actually prefer running a QRP station however I don't fault those that
decide they want to run power on 11 meters. As far as the Freeband goes, I

love it. Its not legal however, most individuals using the Freeband are those who aren't the types with the noise-toys and such. They just want to make a contact.

>> Yep, that is the cb attitude, which explains why 11 meters is the
>sewer
>> pit of radio.

well, then tell us oh great oricle, why are you and other like minded people here invading our "sewer pit"?
hams have so much unused spectrum out there and you have to crowd into our 450 khz sewer.
you should be out there defending your own turf before UPS tries to invade it again instead of crawling into our "sewer" and crashing our party.
if our "sewer" smells so bad, KEEP YOUR NOSE OUT OF IT AND GET BACK TO YOUR OWN SPECTRUM!!!
what, in\sn't several hundred mhz of spectrum enough for you???
or are you just jealous that our massive 450 khz spot got taken away from you?
how petty and pitiful.

Hello,
I am in need of some help on this radio. It will transmit on AM,and SSB
real good. The receive on SSB is okay. The problem is no Receive on AM.
I have checked all of the IF amps and just abot everything else connected to
these transistors. If anyone has a solution to this problem, please reply to
me at this address.hwroger@interkan.net.
Thanks In Advance
Roger Harris

With sun spots the way that they are right now and the noise that it creates, you are doing good to maybe get a 1 1/2 to 2 miles during the day on the regular 40. At night there is no problem because the noise goes away. Other channels besides the regular 40 is a different story altogether.

just received this e-mail today from my server..

Subject: FW: Virus alert

Just an fyi......

We have been informed of a new virus - WOBBLER.
It will arrive on e-mail titled CALIFORNIA.
IBM and AOL have announced that it is very powerful, more so than
Melissa, there is no remedy. It will eat all your information on the hard
drive and also destroys Netscape Navigator and Microsoft Internet Explorer.
Do not open anything with this title and please pass this message on to all
your contacts and anyone who uses your e-mail facility. Not many people
seem to know about this yet so propagate it as fast as possible.

My needle on my dosy TC 4001p is sticking really bad. I have tried anti static spray and cant get it right. Sometimes it wont go down all the way and then it will only show half as many watts as I know im putting out. Sometimes the needle will stick half way or straight up the middle. This is making me man as hell. What do I do guys.

I have an I-MAX2000 in my pine tree about 85 feet in the air. To strap the pole up there I used plumbers strap. I also use the mini 8U gray coax I have ran up to 3,500 watts through the coax and my antenna and never have had a problem. The pole is 21 feet of black cast iron pipe that has never bent we had 80 mph winds and the antenna just blew around and the pole rocked back and forth I climbed the tree the next day and everything was still as tight as can be. So thats what I did it's up to you.

Rob,
I went to the site that you recommended for the FCC License preparation class. I was a bench tech, working in cellular. My employer required an FCC General Radiotelephone Operator License to get a promotion to management. I saw your post and went to

http://www.ddcommunications.homepage.com

You were right! I was able to get the study manual at a killer price. Then I used their online practice exams. I did good on the online exams so I called the company. They came to my workplace, gave a 1 hour class, then administered the Element 1 test. I PASSED!!!! Then another 1 hour class (Element 3), I PASSED AGAIN. Everyone of us (5) passed the test (some of the guys hadn't even studied before, the class was that good!!!!!!! 3 of us were offered the Radar Endorcement, so what the heck, we did the class and passed it too! BEST OF ALL, THEY WERE THE LOWEST PRICES OF ALL OF THE PREPARATION COURSES, AND ONLY TOOK 1 DAY, NOT 2-6 DAYS!!!!
Im going to take the GMDSS maintainer class next Saturday just to get the license!!!! (It'll look good on my resume).
Anyway, thanks Rob for mentioning your success with them. Now I have my license, and the respect it brings...
Take Care,
Jeanette Robison

I think you are correct about not getting the range you should.The
K-40 is a fair antenna but I distrust mag-mounts.
I think 10 miles should be a piece of cake on AM and much more on SSB.

The K-40 is just second to the Wilson
1000. It is a good antenna though. It needs
to be mounted on the CENTER of your ROOF to be effective as you want. The guy
who took your $20 should have taken $10
more and clipped and peaked that radio for you. It will swing 12 watts When
there is moderate to no skip you will do 10-12 miles with on problem. The
Wilson would be a little better, but I would'nt dump
it and buy the Wilson, for the difference will
not justify the cost. 73's and have fun, Lou

From: j_rsmith@my-deja.com
Message-ID: <7vdbngivk1@nnrp1.deja.com>
Source record: 7867

I was at rat shack today just browsing to see what was new and I got a 2000 catalog. So I was flipping through it to see what was new and turned the page and saw a base station. At first I thought this was really weird because I saw SSB and it surprised me that rat shack would come back out with a new ssb radio...then I looked closer and realized it was a uniden washington. They also have a new radio that has the same style switches and buttons as the trc-485 but it is 10 meter radio. It also has cooling fins on the back...I'm wondering if it's gonna be a radio that can be modified like just about any of the radios being sold as 10 meter radios can. I don't like radio shack radios but it's suprising to me that they would come out with something new like that.

3426. Original SAMS PhotoFact CB Series (#1-#292) for sale

Newsgroup: rec.radio.cb
Date: 1999-10-29 00:00:00 UTC
From: Paul <usmc@pcisys.net>
Message-ID: <381A2935.3A75@pcisys.net>
Source record: 7875

I have for sale a 98% complete set of original SAMS Photofact CB Series manuals from #1 to #292 in excellent condition. Missing numbers are: 108, 152, 208, 212, 216, 221, 225, 230, 236, 244, 259, 264, 270, 271, 273, 274, 281, 284, 286, 289-291.
Price is $650.00 (or offer) for the set (I will not divide), and I will pay shipping to anywhere in the U.S. Thats around $2.00 a book (thats less than repro costs), and thats IF you can find them. If interested, I can be contacted at: usmc@pcisys.net
Thanks
Paul

3427. Re: amp efficiency

Newsgroup: rec.radio.cb
Date: 1999-10-29 00:00:00 UTC
From: Big Signal <refused@thisdomain.com>
Message-ID: <381A2CCC.CC0BA622@thisdomain.com>
Source record: 7876

The output section of most AM CBs is actually Class C. However, the supply voltage to the final is "modulated" by the audio amplifier and the resultant output is, not too surprisingly, AM. This way the output transistor is operating most efficiently.

billn6vlr@my-deja.com wrote:

Yes, the tech plus and tech license did do some good. I even know a couple generals that grew up from the ranks of CBer.

I have been licensed for nearly 10 years (shit, time to renew almost!), and I know what is out their. Texas sucks, at least around here.

However, I have been in arguments with people from this newsgroup, licensed, that did grow into respectable acquiantences, that I would talk to (never did get that 6 meter station up, though).

They don't live in Houston, though.

> Right there, you can see the difference between communities. It's the
> same on CB. Some areas, are ok, and others are choked with idiots.
>

This was nothing new to me. I have been across the US 3 times in my life, been to every state, sans Alaska, and toured half of Canada. All before I ever left the roost, so to speak. I know that their are some areas that are full of pukes, and Houston seems to have them.

But, on the flip side, I have found the CB operators here to be EXTREMELY friendly, drug free (which is a REAL rarity), family people who bend over backwards to help.

Go figure.

> >
> "5 landers" are tough. They seem to be very "cliquish". It's hard to get
> into their HF roundtables. As a "yankee", it's even tougher.

Yes, that is all true. I do carry a large stick, in the form of Eimac Steel, though. When you can't get friendship, I have found it best to command respect.

At least the other two hams in my subdivision talk to me now. Amazing when you show the two advanced ops that you can build an amplifier, and they are using appliances.

One of them built a SB220 back in the day, though. Still sits in his garage.

> > >>>>Yes, just like I have on CB. And it costs less, too.
>

You don't seem to understand who invaded who, or what. Let me spell it out for you and the rest of your buddies in this NG.

Back when *I* first became active on the CB band there were 23 channels, you needed a license from the FCC to operate a station, you had to be at least 21 years of age to get a license. NOBODY ran power. NOBODY interfered with other stations. NOBODY got on the air and used language that would make a U.S. Navy "Chief" blush. The band back then was an enjoyable means of inexpensive, low-power communications with other local CBers. The CB band was NOT a "sewer pit" back then, because people respected the rules and obeyed them.

The band BECAME a sewer pit because of people like YOU with your stinking linear amplifiers and stinking toilet mouths and your complete lack of respect for other operators, the rules, or even yourselves. I didn't "invade" your newsgroup or your band. YOU and your idiot power-hungry birdbrain good-buddy types with your Toilet Bowl Mentality invaded "OUR" perfectly enjoyable CB band of the mid-1970s and YOU knotheads turned it into the "sewer pit" that it is today. AND THIS HAPPENED 20 YEARS BEFORE I GOT A HAM LICENSE! So it has nothing to do with my being a ham...it has EVERYTHING to do with my being a RESPONSIBLE user of the CB band who is FED UP with MORONS like you who RUIN it for everybody else.

>if our "sewer" smells so bad, KEEP YOUR NOSE OUT OF IT AND GET BACK TO YOUR OWN
>SPECTRUM!!!

Your sewer? Not at all. The CB band does NOT belong to you and your overpowered, out of band, screw-everybody-else little minority of grade school dropouts. It belongs to those of us who follow the rules, operate legally, and use the band for the purposes it is intended to be used for as set forth in the appropriate FCC regulations that you and your idiot sub-Klan don't even bother to pay any attention to. So why don't you take your stinking amplifiers and noise toys and echo mics and filthy mouths and GET OFF OF OUR BAND!!!

My news reader is going to add my usual signature lines containing my ham callsign and monitor station registry to the end of this post...but be aware that I am posting here as a CB 'er who was on the CB band under the license KSO-9650 beginning in 1975. And I was posting in this newsgroup long before I got a ham license, too.

Take your amps, noise toys, and attitude and get outta town.

73 and good DX'ing,
John D. Kasupski

Have a Uniden Washington SSB base
it features 18watts PEP adjustable
freqs from 26.865 to 28.045
It comes with a Turner +3 power
desk mic.9.5 out of 10 condition.
$125 shipped.Really don't want
to sell it but have other projects going
on.Thought I had it sold 3 times already
but type is cheap....Please email me with
any interest.Next step will be E-bay I guess .Thanks Mike

3435. Hams Suck!!!!!!!!!!!!

Hams Suck!!!!! Ham stands for: Homely, Annoying Moron. Every ham I ever met or heard on the air is a moron. They all are nerds with thick black rimmed glasses and bald and smoke pipes and don't bathe very often. Anyone that would carry a hand held 2 meter unit and use it in public has no life and is a total dork. They all have home made antennas that suck and have them way to close to each other and have to use antenna tuners to get the swr down. They use junk equipment and don't know anything about electronics. They are all just want-a-be CBers. Good Bye

I think his point John, was that if you don't
link what you're reading, take a hike. If he is
invading on you're freq. band, then you have the
right to moan & groan about it. I personally don't
give a SHIT about you or most other Cb'ers. If I knew
you, or you had something to contribute other than
crying and whining about "Linear" "Outbandders" then
I might give a shit about you. But otherwise you
could die right know and I wouldn't loose a second
of sleep.
So quit you're whining about "Legalities" and contribute
something along the lines of " A superior antenna system would
serve you better than a linear" or " I don't approve of the use
of linears, but I can tell you how to get the most out of what
you have" Then a lot of others might not harp about you as
much.

You do sound just like a "HALL MONITOR BOY"

if we wanted to look at it, we'd go to e-bay tie up N.G with that crap here .
What the hell are channels thought the had to do with lakes or rivers. There
tied up N.G.with more crap.

i have never found a base loaded antenna that can hear worth a heck
some can transmit half way decent but just because they radiate don't
mean they can hear

people keep saying that other people can't tell the deference when they
are transmitting on a base loaded antenna but that is not the point
they can not hear worth a heck

that is why they say a base loaded antenna is quieter because it
will not pick up the signals as well as other antennas

when you are talking to another local cb,r about 4 miles
away with no skip coming in and he is coming in at s6 to s9
and he stats that you a getting weak or fading out and that you
need to get a amp
wrong

unless he is running a 100kw or something if you hear him that
strong then he can not hear a dam thing and he is the one that
needs to fix his setup

if he is running 50 to 150 watts then if he comes in a s1 to s2
he should be able to hear you if you are running bare foot

and as for toll free,s idea of a magical network that filters out
all static and leaves the signal untouched ,,,,,that is a pile of bull s&^$$

yes toll the static is wide band but the receiver only hears the part of
the static that is in the receivers pass band and if it is in the receivers pass
band then it is at the same frequency the intended signal is at and there is
no way the antenna can tell the deference between the two

so if it attenuates the static then it attenuates the signal you want to hear
end of line

the reason most people do not care is that the skip has the meter at 10 over s9
most of the day and to be heard you have to be over that
so if the antenna attenuates the noise 20 and the signal 20 db there is really no
problem because the signal is still over the back ground noise
and the back ground noise is now at s4 to s7 instead of 10 to 20 over s9
but the signal is still 10db over the noise so no problem as for as
the antenna owner is concerned
and that should not come in to play any way if not for the dimwit amp runners
heck one dumb head in louisiana that runs on channel 6 pegs the meter
and generates noise from channel 1 to 40 that is in excess of 10 to 30 over s9
no i am not talking about any other skip but just 1 dud generates that much noise

get 10 to 40 going at once and that is why the meter is pegged on all channels
include all the kilowatt wantabees and the band is destroyed

on my old hw 101 i can set 3kc below another station that is coming in at 60 over s9
on the 10 meter band and not hear a thing but some dimwit kilowatt wantabees
that is coming in at s9 on my rad shack cb has spurs as high as s6 to s7 up to
200kcs away

and do not say my cb is junk because i have talked to someone on 23
and at the same time another person was out side in front of the house
talking in the stock mobile on 22 and i never heard one pop or crackle form
the other person
but when i changed the channel to 22 every time he keyed the mike the needle
would hit the peg so hard you could hear it ping

most of the spurs i hear on the 10 meter band is coming all the way down
from the cb band over 600kcs away

except for the occasional dimwit that tries to use a cb amp on 10 meters
and that really annoys me

i even hear some on the 6 meter band from people that has there amps tuned
to the second harmonic

some i have seen even had louder spurs than the primary radiated signal
and with all the mexiconos pounding in the band is truly junk

i dare to say that if every buddy was running legal then the noise would probably
get as high as s1 to s2 with the occasional s4 signal pounding in

which will give the locals about 10 miles range during the day and during
night the range will be about 20 miles

and yes you could run 10 kw to off set that deficiency
but that will just generate more junk instead of fixing the
problems

and toll pleas do not spew any of that magic network trash

The Government again wants your money! The Fed's are quietly attempting to pass a bill (602-P) which would allow the Federal Government to charge Internet Service Providers (ISP's) five-cents for EVERY e-mail that YOU send! Ultimately, this charge would be then passed on to you, the user, by YOUR I.S.P. All collected revenues would then be given to the United States Postal Service to compensate THEM for the 'lost' revenue due to the usage of e-mail. The U.S. Postal Service is claiming that lost revenue due to the proliferation of e-mail is costing nearly $230,000,000 annually. Also, the USPS is seriously contemplating eliminating Saturday delivery, and INCREASING the cost of a first-class stamp to 49 cents if this bill does not pass! One Congressman, Tony Schnell, has even suggested a "Twenty to Forty dollar per month surcharge on all Internet service" above and beyond the Governments proposed e-mail charges. The Capital swithboard number is (202) 224-3121.

About 25 years ago I had a friend who started a taxi company in a major city in the southeastern U.S. The city isn't important because I am sure that the same thing that happened to him has happened to thousands of other people who got started in a business that is dependent upon a two-way radio system to survive. My friend started out with a modest radio system that served his needs quite well and he was happy with the local radio dealer that sold him the system. As time went on the city grew and so did the local taxi industry. Several new companies had started and because there are a limited number of channels allocated for taxi use it soon became necessary to implement sharing of channels by 2 or sometimes 3 companies. Nobody really liked this arrangement but the FCC had no choice in this matter and warns all business radio licensees that they have no exclusive rights to any frequency. It wasn't long before all the taxi companies on his channel began complaining about the interference they were causing each other. My friend made complaints and appeals to the FCC for years with no results. Finally a letter arrived from the FCC notifying him that he was being fined $500 because his late night dispatcher had failed to make a station ID between 2:00 and 3:00 AM. After this experience he gave up on the FCC and consulted with his two-way radio dealer about what to do to improve his system and help deal with the interference. This was the beginning of a battle between the 3 companies to dominate the channel. First there were the new higher power 110 watt mobile radios, the CTCSS tone boards and the high gain antennas. After that came the new base radio with the maximum legal limit power with a new 10 db gain antenna. The crowning glory came when the contractor came to raise the tower another 80 feet. These improvements cost him several thousands of dollars but he was determined to own the channel. The only problem was that the other companies were doing the same thing so they all ended up with the same old problem only escalated to a grand new level. They still interfered with each other in their local operating areas but they could all be heard 2 counties away. The only big winner in this war was the dealer that sold all of the equipment. I hope that most of you are beginning to see some similarity to the problem we have on CB today. Since we are not satisfied with the capabilities of an ordinary CB radio, we start trying to buy our way to happiness with power mic's, "super-gain" antennas and modifications to achieve 120% modulation. When this doesn't work we go and buy a linear amplifier. Soon an $80. CB with a modest antenna becomes a several hundred dollar mega-station that gets about the same results. Maybe it is time to re-think our ideas about how to get good results from our equipment. Thirty years ago CBer's were happy with 5 watts and a simple loaded coil antenna that looked nice and didn't bang into every low tree branch or garage door. We need to stop listening to the equipment pushers and encourage others to maintain simple, legal and efficient

equipment. Good engineering practice towards adequate modulation and efficient antenna systems will do more to improve CB than all of the extra equipment in the world. We also need to urge the FCC to make needed changes in the CB regulations such as allowing FM. FM would solve a lot of interference problems. The way to do this is to let CB equipment manufacturers know what you want in your radio. They seem to have a lot of influence with the FCC when it comes to getting approval for new products such as FRS radios. When they see that several hundred thousand people are interested in new FM CB radios then the action will begin. If you think this is a good idea then send your favorite manufacturers some email today. CB improvement is up to you and this is your chance to do something meaningful for a change. Thanks for reading this post. I feel much better now that I have got this off my chest.

Good luck and 73's and 88's,

Capt. Over

On 29 Oct 1999 03:59:59 GMT, pllo2a@aol.com (PLLO2A) wrote:

>it is OUR opinion that what WE do on OUR band is OUR business and has validity
>for US and what YOU do on YOUR bands is YOUR business and has validity for YOU.

As a CB operator for 24 years (1975-1999) and counting...the CB band
is just as much mine as it is yours - perhaps even more so mine since
I operate legally and thus have not forfeited my privilege under Part
95 to operate on that band. If you are not operating 100% within the
rules of Part 95 then you have no right to open your mouth at ALL
since you have NO privileges to operate anymore, you forfeited them
when you keyed up out of band or with excessive power levels, and just
because FCC or nobody else hasn't gotten around to enforcing that FACT
yet doesn't mean they won't eventually do just that, and remove your
sorry whining sniveling butt from the band once and for all (I hope).

>WE don't have a right to tell YOU how to run YOUR lives and in turn YOU don't
>have a right to tell US how to run OUR lives either. YOUR opinion, to US, is

I'm not telling you how to run your life, pal...I don't care how you
run your life. I do care how you run your ILLEGAL equipment when it
interferes with my operation of my LEGAL equipment.

Outside of that, I don't care if you stay in a crack house stoned out
of your mind 24 hours a day drinking Thunderbird wine out of a bottle
in a paper bag and wishing your sexual organs still worked as good as
they used to...as long as you keep your illegal linear amps and foul
language and inconsiderate operating practices off of OUR CB BAND, I
don't really give a flying frig at a rolling donut what you do with
the rest of your time. The same goes for the other lowlifes in this
group with the same attitude as yours.

>invalid and OUR opinion, to YOU is invalad. inother words, stalemate except you
>are on a CB news group where these things are going to be discussed. if you

If you are operating illegally, YOUR opinion is the most invalid of
all, since you have no legal privilege to even be ON the air in that
case. You aren't a CBer at all, you are an OUTLAW. Your opinion is
invalid to me, it is invalid to the other people in this newsgroup and
on the CB band who operate legally, and it is invalid to FCC.

>want to bitch about it to agreeable ears, go to one of your other ten
>ham-related ng's and bitch there.
>if you haven't noticed, nobody here is really listening to what you have to

Oh, I see plenty of other posts in this NG advocating LEGAL,
CONSIDERATE operation on the CB band. There are plenty of other CB

operators, some of whom are in this NG and most of whom are not, who would like to see the band cleaned up and imbeciles like YOU and others like you removed from the CB band permanently. You idiots wouldn't know anything about that because you're too busy rubbing your echo mics and amps against your crotches and telling yourselves how masculine you are because you have such "big radios" to play with.

>say. we are just wasting a lot of time fending off butt-inski's like you who
>spam this ng with a bunch of shit that no one here is interested in hearing
>except those of like mind to yourself.

First of all, you have an interesting definition of spam. What constitutes spam to you, birdbrain? Anything posted by anyone who doesn't share your complete lack of respect for FCC rules and for other users of the CB band?

Secondly, did it ever occur to you that nobody here is interested in hearing the opinions of those who RUIN the CB band for everyone else except you and your fellow barbarians?

>it's like the situation of someone throwing a party and the crasher gets
>ignored. usually, the unwelcome ones get the hint and leave but the rf police
>are like the energizer bunny. they just keep going on, and on, and on...

Yeah, well, maybe that's because the majority of us on the CB band want to get rid of you buttholes with your amps and foul mouths and lack of consideration for others, so that we can go back to actually ENJOYING the band like we used to be able to do before you morons showed up and started ruining it for everybody - but like the Energizer bunny, you mindless idiots just keep going and going and going and....

>i'd rather jump or live in a cardboard box than work for someone like this.
>not so much the "dork" part, but i really have a hard time staying around
>someone who thinks they have the authority to control personal aspects of my

Nobody gives a rat's ass about your personal life. But when you key that microphone, it isn't personal anymore. The RF Spectrum is a PUBLIC resource, and you and your fellow MORONS at bigradios.com and the rest of you with your amps and out-of-band radios and foul mouths on the air are ABUSING that public resource. And you can count on the rest of us to keep on pointing that out until the day finally comes when something is done about it. When that happens, I hope they find a nice empty zoo to cage you animals in, where you will constitute no further danger to our public resources and where the only radios you will have any access to will be listening to the squawks coming from the guards' handhelds when they walk past your cells to feed you your daily bowl of slop.

>am speaking as A CBER. Why is it so hard for you to accept that there
>are other CBers, who don't like the way you lawless guys run? It's not
>just the hams. In fact the only hams that care are the ones (like me)
>who grew up on CB and still use it (When it's not overrun by morons).

Which is also the case here...but these morons justify their illegal abuses of the CB band by saying "it's okay because everybody does it". They just don't get it - everybody does NOT do it, and everybody does NOT appreciate the fact that THEy are doing it. But you know what? They do not CARE who else they are interfering with, they don't CARE who they offend with their toilet mouths on the air, they don't CARE that they are ruining the band for everybody else.

That is WHY we need to get the FCC to start enforcing Part 95 again. I say we forget about NALs and fines and confiscating equipment and just start locking these animals up behind bars where they belong.

At this point, I'm going on record as supporting the measure currently before Congress that would empower local law enforcement agencies to enforce FCC regulations with respect to illegal power and out-of-band operation. Initially I was not in favor of this legislation when I first read the text of the bill, but having listened to the rantings of people like pllo2a and Toll Free and other people in this NG representing the riffraff that is ruining the band for everyone else, I have become convinced that nothing will make these imbeciles see the error of their ways and get them to voluntarily clean up their act, because they flat out DO NOT CARE that their actions are ruining a public resource and making the band unusable for those of us out here who wish to use the CB band responsibly.

That being the case, I will contact every single member of the House committee, as well as the representatives in the house for the congressional district in which I reside and each district surrounding the one in which I reside, and ask them to support this measure. If the bill passes the House and goes to the Senate, I will also write to each member of the Senate committee and the two Senators from New York State and ask for their support of this bill.

Hopefully, the bill will pass both the House and the Senate and be signed into law by the President, at which point I will appear at the local police station and volunteer my services as a CB operator, ham operator, and concerned citizen to assist the local police in developing the technical expertise necessary to properly enforce this

law. There is at least one ham on the local police force here, I do believe he might appreciate the assistance since no doubt he is the officer who, having the most knowledge on the subject, will end up being tasked with the responsibility to head up any task force being put together by his department.

I'll do the same with the county sheriff's office, and with the nearest zone headquarters of the New York State Police.

And then each time they throw the book at some buttwipe like pllo2a or Toll Free, I will take great pleasure in sitting there in the court room as a spectator and letting the offender see me struggling (though not all that hard) to conceal (though not all that well) my absolute delight at seeing yet another abuser of the CB band getting his or her just desserts.

>You try to deflect the real issue by creating an enemy (hams) to rally

>it". I don't know what abuse they've had to take as a child, but I, and
>other people, don't need to deal with the after effects. If you want a
>toy, go buy a Nintendo. Radio is to communicate with.

For most of us with at least half a brain and the inclination to actually utilize it now and then, yes. Unfortunately, some people never grow up, never learn the reasons WHY we have RULES, never learn that rules are a compromise, never learn the reasons WHY respecting those rules and the compromises they encompass is preferable to the alternative, never learn the effect on society that their immaturity has, never understand how their failure to respect the rules affects the rights of ALL OF US and subjects us to further regulations and limitations on our personal liberties caused by the minority who abuses those liberties.

antenna antenna antenna

maco super laser 500 or something to that efect

get a dual polarity beam of some tipe

vertical for local moble stations and horizontal for
bases that have only got a horizontal beam

if you do not get a dual polarity beam then
just mout the beam verticaly polarized

and pleas no amps!!!!!!!!!

Oh it wasn't that bad a rig on AM in its day. I ran a few of
those and it was about the only ham rig that was worth a crap on AM.
Obviously there were the defficiencies in them but once you got 'em
aligned and modified slightly they were good sounding radios on TX.
Somewhere I still have some new kits that replaced the meter
circuit and provided some gain in the IF. I may even have some AM
and CW filters as well as some xtals for these rigs.

If you hear me interferring with you, let me know! You most
likely won't hear me because New York and the Cheasapeake
Bay are in the "skipped zone" to each other. I make
a couple of quick contacts, maybe 5 or 10 minutes, and I've
got my skip fix taken care of. You remind me of the guy that
asks for a radio check every rime you turn it on. No, you
remind me of the local butthead that asks for a radio check
every 15 minutes. He has an Echo-Max 2000 set to max and always
has that stupid beep on. Wants to know if he's sounding good <:

You tell him "yes" just to shut him up.

Hey Kaputski, "Yes!, I've had my comms interrupted by skip."
Depending on the circumstance, I'll talk to the interrupter,
give 'em grief, or whatever. Heres a tissue, stop whining.

3487. Beam Headings

Newsgroup: rec.radio.cb
Date: 1999-10-30 00:00:00 UTC
From: Green Dragon <nunya@business.com>
Message-ID: <381ac081.0@monster.zebra.net>
Source record: 7936

I found a nifty program that can be used to determine the beam heading from point A to point B as well as the distance in land miles. It's called Quibla Calc. It is primarily designed to assist followers of the Muslim faith in determining the proper direction to face during thier daily prayers. However, it has a general use section that accepts the point A and point B input. Given that information in lattitude, longitude format it will return the distance between the points, the bearing from A to B and the magnetic declination at point A.

As I don't follow the Muslim faith I'd prefer a similar program that left out the Quibla references, but given the lack of such a program (that I've been able to find) geared toward the radio hobby I guess it'll do so I thought perhaps some of you folks on this newsgroup might find it useful. Here's the link: http://www.ummah.net/software/qibla/

Send it in to Crystal Electronics and they will fix it and bring it back to factory specs. Have it back to you in 7 days or so and it will cost about $40.

We have ours done every six months so as to be as accurate as possible for our customers. We use them on our work benches.

Good luck. Crystal is really easy to work with.

No there is not a trucker channel. The FCC has not allotted a channel for just truckers. The most commonly used channel for all is 19. Then most companies use other channels for loading and dispatching out on. Check your local area or the area you are traveling in by turning the channel selector until you hear them talking. Then take your chances. Regardless of who you are listening too you may not enjoy the conversation.

Good luck in finding the trucker channel in your local area.

Check both of your antennas for the bandwidth on them. You might be surprised.

If you are on a big rig and a 102 whip isn't practical then try a Nug-a-tron.
Or a lookalike. Just keep in mind maintainability.

This antenna has impressed me over and over on installing them on vehicles.
More a norm than not to be very broad banded.

It depends on how the antenna likes the vehicle. Hope that helps.

3498. Re: COBRA 75 WX ST is it ANYGOOD???

Newsgroup: rec.radio.cb
Date: 1999-10-30 00:00:00 UTC
From: redhicks@aol.comnojunk
Message-ID: <19991030074814.18502.00000297@ng-cs1.aol.com>
Source record: 7947

The cobra 75wxst is a good radio for its intended purpose. Sometimes I don't understand why everyone has to flame a certain radio. All radio's are good if it is useful for the intended purpose. Ok.

The 75WXST has a recieve that may be choppy if you turn the squelch so you don't hear all the trash. To hear the entire conversation you just turn the squelch back.

Its not a big full featured rf gain/mic gain ssb tuned up go get em talk all over the country radio and never will be. But it is a small little radio that will give you wx reports in you local area. Stay out of the way. Can be mounted anywhere in the vehicle. Put a good antenna on it, tuned to the vehicle and voila, you are using a cb radio. This radio should please all the people out there wishing that cb's would stay at 4 watts.

It is also useful in keeping up with the traffic conditions.

When a customer walks in and asks what is the best radio on the market. I ask them what they want the radio to do. Every radio is good. The antenna makes up 80% of the operation. Put a good antenna on the vehicle, make sure it is tuned and go get you a radio. It doesn't even have to be an expensive radio. It will work. If it suits your needs will be the next question. Since there is not enough information in your post to determine this then a fair evaluation of your needs can not be met.

Fair enough. Hope you have fun in the CB World.

PS I have very happy customers with the 75WXST and have had a few that weren't. That is why I ask them right off what they want their radio to do for them. It is not a DX Radio as a norm.

Source record: 7948

Hi Everyone,

Recently some buffoons in this newsgroup have become disillusioned with their inability to logically defend their illegal and inconsiderate operations in and around the CB band, and thus have found it necessary to resort to name-calling, personal attacks, profanity, threats, and other forms of childish behavior in order to compensate for their own inadequacy.

The most recent example of this kind of behavior came from someone who posted a message with the subject line that said something to the effect that I am a troll. Well, okay...if that's what you want, that's what you get. I always have figured that if I've got the name, I may as well have the game...so now, I'll show you mental midgets what trolling is all about. Get a load of what I am about to e-mail to all five FCC Commissioners:

October 30, 1999
From: John D. Kasupski, KC2FNG
To: Mr. William Kennard, Chairman
Ms. Susan Ness, Commissioner
Mr. Harold Furchtgott-Roth, Commissioner
Mr. Michael Powell, Commissioner
Ms. Gloria Tristani, Commissioner

Subject: Citizens Radio Service

Ladies And Gentlemen:

I am writing to you for the purpose of expressing some concerns that I have relative to the present state, as well as the future, of the Citizens Radio Service. It is my belief that the CB band is long overdue for some attention from the Compliance and Information Bureau, and also, I believe that some portions of Part 95 need to be re-examined in light of what has happened to the band in the years since the requirement for a station license in order to operate on this band was abolished.

The regulations governing operation in the Citizens Radio Service (which I shall refer to hereafter as the CRS in the interest of brevity) have basically remained unchanged for a number of years. The expansion of the band from 23 to 40 channels, and the elimination of station licensing in the CRS, took place over a decade ago. These have

been the last meaningful changes to Part 95, and many of us who operate in this band have come to feel that the band has been basically ignored by the government ever since. Certainly, it is generally agreed in the radio hobby community that FCC efforts with respect to enforcing Part 95 have been virtually nonexistent for over a decade except where numerous complaints were received over a prolonged period of time relative to an individual miscreant, and/or where interference with other radio services was involved.

I am sorry to say that this has contributed to the fact that there is now widespread disregard for Part 95 evident on the part of all too many CB operators. The use of illegal RF power amplifiers on this band is rampant. Deliberate interference by some operators with legitimate communications being conducted by other operators is altogether too common here. The band is in danger of being overrun by inconsiderate, foul-mouthed buffoons with no respect for other users of this part of the RF spectrum, no respect for Part 95, and no respect for FCC enforcement efforts.

In fact, some might say that the band has already been overrun by the outlaws. Personally, I do not believe this to be the case. I believe that the majority of CB operators nationwide would like to see courteous and legal operation...but certainly, the number of inconsiderate operators and the incidence rate of illegal operation in the CRS leaves much to be desired.

I first got started in radio as a shortwave listener back in 1966 at the age of eight. At that time I was able to monitor the CB band using a general coverage receiver. I became active on the CB band at 18, at a time during which there was still general adherence to Part 95 on the part of the vast majority of users in the CRS. As I think back to those days, I recall hearing very, very few operators who did not use their FCC-issued station callsigns. I recall hearing very, very few operators who were not using type-accepted equipment. Rare indeed was the individual who ran excessive power levels or deliberately interfered with other stations, and nobody used the kind of language on the air back then that I regularly hear on the air today in the CRS. If they had, I'm quite sure my parents would have forbidden me to listen to them. As it turned out, my association with SWL and CB at a relatively early age led to my eventually becoming a licensed amateur radio operator this September. I now hold a Technician class license with callsign KC2FNG...but my purpose here is to address the CRS, so please allow me if you will to check my ham ticket at the door (so to speak) for the most part. Although I am a licensed amateur, I am for the most part concerned with the CB band on which I got my start in two-way radio communications.

I, along with many countless other responsible users of the CB band, would like to see things return to that state of affairs. We would like to see the foul-mouthed, inconsiderate operators gone from our band. We would like to see those who run illegal and grossly excessive

RF power levels removed from the CRS and the interference that they cause to other stations removed along with them. Unfortunately, the hands of responsible, legal CB operators are tied due to the fact that there is a lack of technical expertise for self-policing activities as is common in the Amateur Radio Service - not to mention the lack of anyone on the CB bands with any standing such as ARRL's Official Observers - and also, unfortunately, there is the perception held by both legal operators and by those who ignore Part 95 that the FCC does not care about the CB band. Thus, short of the undesirable option of vigilantism, there is little that decent, law-abiding CB operators can do other than to either put up with the violators, or leave the CB band entirely.

This situation need not be permitted to continue. The CRS can still be a useful, viable alternative to the GMRS or amateur radio service for persons desiring inexpensive access to short to medium range communications for use by the general public. In order to accomplish this, I believe that two things need to be done.

First of all, the CIB must take a more active approach to Part 95 enforcement than has been evident in the past. It has been noted in various discussion groups on the Internet, as well as in recent articles in radio hobby magazines such as Popular Communications, Monitoring Times, CQ, and QST, that FCC enforcement efforts relative to the Amateur Radio Service have been stepped up considerably of late. However, the wheels still seem to turn somewhat slowly in this regard.

In one widely publicized case, the Tampa District Office of CIB issued a Notice of Apparent Liability for Forfeiture to an individual in Jupiter, Florida charging one William Flippo with numerous violations, including willful operation of an unlicensed station on the frequency 28.375 in the 10-meter amateur band, willful or malicious interference with an on-going amateur radio communication, and failure to make his radio equipment available for inspection by an authorized FCC representative.

While I was happy to learn of the FCC's action in this matter, I was also dismayed to see that this NAL was issued in July of 1999, when amateur radio operators in the Jupiter, Florida area had been filing written complaints with the CIB since November of 1997.

It is my hope that the new enforcement bureau that began in October of 1999 will enable the FCC to deal with such violators on a more timely basis, but the fact remains that if it took over a year and a half for the FCC to deal firmly with a violator who was interfering with communications on the amateur bands, what chance do we who operate on the CB band have of obtaining any support from FCC relative to enforcing Part 95 and helping to clean up the CB band?

I am an individual who understands the value of regulations governing the use of that public resource that the RF spectrum in fact is. I

have always operated my CB station in accordance with Part 95, and I always operate my ham station in accordance with Part 97. William Flippo is alleged to have intentionally interfered with 2-meter repeaters in the ARS, intentionally interfered in the 10-meter band, and is alleged to have made false 9-1-1 calls as well as refusing to permit an authorized FCC representative to inspect his station after that FCC representative used radio direction finding techniques to determine that the interference was coming from Flippo's residence.

As a CB operator, I feel that those who behave as Flippo is alleged to have behaved, give CB operators a figurative black eye relative to our public image. As an amateur radio operator, I find that the ARS suffers the same black eye because most people have no idea of the differences between ham radio and CB radio. One is perceived by the public to be pretty much equal to the other. The public reads about individuals who behave as Flippo is alleged to have behaved, and gets the mistaken impression that this is how all Cb operators and hams behave. Thus my reputation is damaged, however undeservedly, by this perception on the part of the public. The same holds true for all other amateurs and CB operators who operate their stations within the parameters specified by the applicable FCC regulations.

I am sure there are many in both the ham and CB radio services who would love to try to repair some of the damage to our reputations that is done by behavior on the part of a minority of individuals who act as Mr. Flippo is alleged to have acted. We would like to help clean up the Cb band so that it can again be a radio service that is useful for the purposes for which it is supposed to be used under Part 95. I therefore pose the following question to the Commission, on my own behalf and on behalf of other CB operators who operate our stations legally and considerately: How can those of us who operate legally under Part 95 help to rid our band? When confronted with the behavior of the buffoons who began invading the CB band back in 1980's with their illegal linear amplifiers and noise making devices, what are we as responsible, legal CB operators to do about it, as far as the Commission is concerned, and particularly as far as the enforcement bureau is concerned?

I intend to write an article for one of the radio hobby magazines pertaining to this subject in the near future, and would like to be able to present the Commission's "take" on this issue to the radio hobby community through that article. Any advice that I can pass along to the law-abiding users of the CRS, will certainly be appreciated both by me and by those users of the CB band who would like to see the band cleaned up, as I do.

A couple of recent issues of Popular Communications magazine featured articles on what appears to be a somewhat well organized group of flagrant violators claiming to run mobile units with blatantly illegal amounts of RF power output - we're talking thousands of watts, in a band where 12 watts PEP is the absolute maximum allowable by Part 95.

This group can be easily found on the Internet - just read the Usenet newsgroup rec.radio.cb and you will find hordes of violators blatantly buying and selling illegal power amplifiers for use on the CB band, describing how to modify CB radios for illegal operation on unauthorized frequencies, advocating that others totally ignore Part 95, and even advocating that people operate in the ham bands without a license.

They even have a site on the world wide web: http://www.bigradios.com is a site which includes AVI format digitized movies of what these outlaws call their "shootout vehicles" - which basically are vans and sport utility vehicles equipped with multiple high-capacity alternators, which power gargantuan RF amplifiers. The site includes a picture page with links to digitized photographs of these vehicles. At the top of this page appears the following (quoted directly from http://www.bigradios.com/shadow/):

Definition of the SuperBowl -- Channel 6:

If there are 10,000 CB'er's on the SuperBowl...
then out of 10,000 only 1,000 can be heard some of the
times...
and out of 10,000 only 100 can be heard most of the
times....
and out of that 10,000 there are probably only 10 of the
most well known
guys that talk on the SuperBowl and can almost talk skip when
they want.....
This is a great example why the bowl is not for the
weak!

In my opinion, ladies and gentlemen, this is also a great example of why the CIB needs to start taking a more active role in enforcing Part 95 - particularly with respect to taking action against groups and individuals who flaunt their complete disregard for Part 95 in this manner. Here is a group of outlaw Cbers who apparently takes pride in the fact that their actions have render a frequency on the CB band completely unusable to all but ten of the 10,000 CBers nationwide who might wish to exercise their privilege to use that frequency!

One page on this web site is a "marketplace" that includes a page devoted entirely to buying and selling illegal RF power amplifiers for use on the CB band.

Another page on this web site, http://www.bigradios.com/tollfree/calendar.htm has a "Calendar Of Events" listing dates and locations where these violators gather to show off their illegal equipment as well as buy and sell it. The page includes the following thinly veiled threat which I again quote directly from the web page:

"What you are about to see is classified information. Tell everyone
but tell no-one.
You know what I mean? It could be detrimental to the person
causing this
information to fall into the wrong hands. We saw what you did and we
know who
you are."

The behavior of people like this is detrimental to the CRS. Anyone who has been active on the CB band for as long as I have been, has seen what they have done to the band. Anyone who wants to know who they are, can find them in the Usenet newsgroup rec.radio.cb where at least two of these miscreants has the audacity to regularly post messages bearing header information that would upon some investigation reveal the Internet Service Provider whose facilities were used to post those messages.

I am not suggesting that the Commission involve itself with policing what is posted by these individuals on the Internet or with the content of their web site, I merely include this information to demonstrate to the Commission the complete disregard that these individuals display for the FCC and Part 95, not to mention the rights of legitimate, law-abiding users of the CB band. Since the web site is kind enough to provide a calendar of events detailing where and when these violators can be found, it seems to me that a timely visit to their "event" from an FCC enforcement team would allow the confiscation of this equipment, would allow for a lot of fines to be levied for some pretty serious violations of Part 95, and the money collected in fines could be used to fund further efforts to enforce FCC regulations. After all, by flaunting their complete disregard for the regulations under which they are supposed to operate on the CB band, these people are daring the FCC to do anything about. They are asking for it...so why doesn't the CIB give it to them? Once these people get together and start keying up their gargantuan amplifiers, I believe the use of a $30 field strength meter would provide all the probable cause anyone would need to have reasonable suspicion that a violation is being committed. The fines that could be collected would total a lot more than $30, and confiscated equipment that was then destroyed in accordance with the usual FCC procedures would no longer be available to contribute to the chaos that is caused on the band by the operation of such equipment.

Furthermore, such an enforcement action would undoubtedly be widely publicized, especially in light of the fact that this particular group was just featured in two articles in Popular Communications magazine. This would serve notice in a very public manner to the outlaw operators on and near the CB band that the Commission is getting serious about Part 95 enforcement again. A great opportunity exists for CIB to score a major financial and public relations windfall here...a fact that I hope will not be lost on you ladies and gentlemen of the Commission when you read this. I fully hope that you will investigate by viewing the web site I have just brought to your

attention, and have a look at the rec.radio.cb newsgroup for yourselves and see how blatantly these people publicize their disregard for the regulations, and direct CIB to take appropriate action so that the legitimate, law-abiding users of the CRS can see that the FCC has not abandoned the band after all.

The second step that I believe needs to be taken in order to restore the CRS to a respectable status in the eyes of both the public at large and of the radio hobby community, is to amend Part 95 so as to make the job of the enforcement bureau easier. Admittedly, the enforcement task that the CIB is faced with on the CB band is monumental, due to the large number of users on this band, the fact that there is no licensing data on this band thus making it more difficult to identify violators, and the sheer number of violators involved as well as the apparent impunity with which they have ignored Part 95 - and continue to do so.

The enforcement task is not made any easier at all by the fact that even stations running legal power at 27 Mhz can find their signals being propagated far beyond the 250 Km legal distance limit for communicating between two stations in the CRS. The fact that the only legal modes for use in this band are AM and SSB emissions doesn't help things any either since the undesired propagation effects are magnified by the use of AM and SSB, as opposed to FM which would be subject to the "capture effect" and allow legal operators to hear the local stations they want to communicate with, without interference from weaker signals propagated by band conditions from beyond the 250 Km limit. In addition to the above, there is the fact that thousands, and perhaps hundreds of thousands of stations in the CRS are crammed onto exactly 40 channels. This has led all too many operators to unfortunately seek quieter territory in the RF spectrum by operating illegally in what has come to be known as the "free band" - i.e., frequencies adjacent to the 40 channels authorized in the CRS.

I have not, do not, and never will operate on unauthorized frequencies. However, I can somewhat sympathize with the otherwise considerate and responsible operators who seem to find it necessary to operate in the "free band" in order to escape the chaos that now exist on the 40 legal channels, and which are the result of overpowered stations, deliberate interference by some stations with other stations, inconsiderate operation by foul-mouthed individuals, etc. As a no-code amateur licensee who thus does not have HF privileges, I can also sympathize with the "freebanders" argument that they are operating in the only place in which they can operate on HF without knowledge of Morse Code in order to obtain an amateur radio license that grants HF operating privileges.

Although I do not condone the out-of-band operation practiced by the so-called "Freebanders" and in fact I object to their operations due to the fact that all too often they operate in the 10 meter ham band where I eventually hope to gain operating privileges legally by

upgrading my ham license in the future, I must in all fairness point out that aside from the fact that they are operating on unauthorized frequencies, the operators who I hear on the so-called "freeband" when I listen there on my general-coverage receivers do seem to be a lot more considerate and responsible with respect to their other operating practices and procedures than do many of the operators who confine their operation to the 40 channels authorized by Part 95.

From this, I am led to believe that the majority of the operators to be found in the "freeband" regions would seem to be those operators who are the most technically adept and thus able to modify their equipment to operate on frequencies it was not designed to operate on. I think it is somewhat a shame that those people are driven to violate Part 95 because the behavior of those they wish to leave behind on the "legal 40" has become so commonplace that they feel they must take such as drastic step as operating on unauthorized frequencies in order to escape the more blatant practitioners of CB barbarianism. While I would much rather see these people do a little bit of studying and get their ham tickets instead, the fact remains that many of these freebanders wouldn't be where they are if it weren't for the rampant abuses going on in the legal CB band.

The question, then, as I see it, is one of how to deal with the multiple problems that have arisen on and around the CB band as the result of the conditions which exist there. I have given the matter some thought and have come up what I think is a novel idea that will solve two problems at once. It would solve the problem with the CB band, and it would solve the problem with the argument in the ARS with respect to whether or not we should have no-code HF licensing. Please permit me, then, to propose the following to the Commission:

I believe that the current CRS should be reorganized as part of the Amateur Radio Service, with station licensing as a prerequisite for operation after January 1, 2002. This would give current CB operators two years with which to comply with the new licensing requirements. After January 1, 2002, the possession of transmitting equipment without a station license would be grounds for confiscation of the equipment as well as the imposition of fines and/or imprisonment for violators. Equipment confiscated from violators would be auctioned for sale to licensed users who are authorized to legally possess and use that equipment, and the proceeds from those auctions, along with the money collected from violators in fines levied by the Commission, would be used to fund enforcement of the FCC regulations.

The new CRS that would then exist after January 1, 2002 would be a different class of license within the Amateur Radio Service. This would of course necessitate a reorganization of the amateur radio licensing structure at that time...but since I understand the Commission is considering reorganizing the ARS licensing structure anyway, I don't see this as a problem. The specifics of the ARS reorganization would of course require input from other amateurs, but

for what it is worth, my own ideas with respect to this issue would be to have the following four license classes:

1. Amateur Novice - This would be an entry-level, no-code license class permitting operation on HF on the 27 Mhz band only. Authorized emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The band for this class of license would be created by combining the current 40 CB channels with additional radio spectrum adjacent to the current CRS allocations.

Legitimate users of licensed services in those frequency ranges have largely abandoned those frequencies already anyway due to interference from unauthorized operations there, so it should not displace very many, if any, users from this part of the RF spectrum if the Commission creates an 11 meter amateur radio band encompassing, say, 26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations would be specified - personally, I would advocate having FM and data modes sharing spectrum above or below the current 40 channels to minimize interference from those modes with existing radios now available for CB operation...perhaps adding ten more AM/SSB channels below or above the current CB band, and authorizing FM below that range of frequencies, and CW and PSK-31 emissions above that range. I leave it up to the Commission, however, to determine the most efficient method of allocating the available RF spectrum into sub bands for the permitted emissions type, perhaps with input from ARRL, and/or from current users of this portion of the RF spectrum other than myself.

The maximum allowable power levels here would be QRP levels of 5 watts or less, to remain in accordance with the ITU treaties that require knowledge of Morse Code for operation on HF otherwise. We would retain the low-power status of 27 MHz but expand it, authorize more emissions modes, and bring it under the auspices of the Amateur Radio Service where it would be subject to volunteer examination as a license requirement, and thus also bring it within the jurisdiction of ARRL Official Observers, which would make effective enforcement possible.

Licensing requirements here would consist of an extremely elementary written test only. Applicants would need to know the difference between AM/SSB/CW/FM/PSK-31 emissions and demonstrate a knowledge of the FCC regulations governing the 27 MHz band on which they would be receiving operating privileges. CW, as well as tone-modulated CW in the FM mode, would be permitted since it would enable holders of this class of license to practice sending and receiving the code for those who wish to upgrade their licenses and thus gain more operating privileges.

2. Amateur Technician - This would add the privileges of the current Technician license to those of the new license class outlined above. Holders of the Technician class license would haver the privileges of the new Amateur Novice (27 MHz), plus full amateur privileges above 50 MHz. This, too, would be a no-code license as is currently the case

with this license class.

3. Amateur General - This would be comparable to the current General class amateur radio license. It would require a slow-speed code test - perhaps 5 WPM - in addition to the more difficult written examination for the General Class license, and would combine 27 MHz privileges, full amateur privileges above 50 MHz, and the additional HF privileges currently enjoyed by Novice class licensees.

4. Amateur Extra - This would be the same as the current Amateur Extra license class, and would allow all amateur privileges on all amateur bands.

I believe that this proposal would be a good compromise for the no-code HF access debate as well as allowing us to clean up the CB band. It allows for funding of enforcement efforts through allocation of fines and other monies collected as a result of enforcement, and it would allow the 27 Mhz band to be brought under the watchful eyes and ears of ARRL Official Observers, thus making enforcement less of a chore for the CIB which must currently try to go it alone in that regard. And finally, by making the 27 Mhz band a part of the Amateur Radio Service, users of this portion of the RF spectrum would be able to learn from other hams and discover how to best make use of their operating privileges legally, using improved antenna systems and more technically sound equipment to increase range rather than resorting to higher power.

While I am certain that several details in the above will require modification - particularly with respect to the actual allocations and band plan within the new 27 Mhz band and the new requirements for the other amateur license classes - I think that the basic idea bears examining to see whether or not it, or some variation of it, cannot be used to remove a thorn from the side of both the Commission, and those of us on the CB band who would like to see it again made possible for us to use the 27 Mhz band to its full potential.

Admittedly, this is an ambitious proposal calling for widespread changes in the current 27 Mhz band. Implementing such changes will not be easy. There are, however, probably no easy answers to the problems currently existing on this band, and thus, I feel that an ambitious initiative is required to return this portion of the RF spectrum to a condition that will be a positive value to its users. I feel that my ideas will benefit the current users of both the CB band and the amateur radio service, in that it will not only address abuses of the 27 Mhz band in the current CRS, but also provide a clear path for the responsible, courteous CB operators who will remain on 27 Mhz one it is cleaned up to have an opportunity to advance their standing in the newly organized Amateur Radio Service, and thus will benefit the amateur community as well.

In the short term, implementation of this or a similar idea for the CB band may be problematic, but in the long run, I feel it would benefit

the entire radio hobby as well as removing a major thorn from the Commission's side. Therefore, I respectfully ask and request that the Commission give serious consideration to implementing some form of this proposal for the good of radio in the United State as well as the rest of the world.

Sincerely,
John D. Kasupski
KC2FNG

I'm e-mailing myself a copy of this message, which will thus be run through the spell-checking utility in my news reader before it goes out. The copy that appears in my mailbox will be free of all spelling errors, just like the one that appears above, and then I will forward it to all five FCC Commissioners.

Once that is done, I will follow up on any replies I receive from the Commission. I will NOT reply to any posts in this newsgroup relative to this communication, and since my POP3 client automatically trashes anything sent to me in e-mail that is unsolicited, don't waste your time e-mailing me either because your e-mail goes right to the trash folder without my ever even being aware that you sent it. If you aren't on my mailing list, I don't get your mail...period. The ultimate in spam control, the ultimate in flame control, the ultimate in privacy. That comes from knowing how to set up effective filters in your POP3 client. If you receive spam and flame messages in your e-mail account, learn to use filters. :-)

I will say this...I am not the least bit intimidated by the threat on the bigradios.com web site. You morons don't know what the phrase "detrimental to your health" even means until you show up here with intent to try to back up your ridiculous threat and have to stand where I can get you in my sights. TRY to make good on your silly threat if you think you are man enough.

By the way, anybody notice one less potty-mouth in this NG lately? That's because a couple of his profanity-laced messages got forwarded to abuse@mindspring.com and so apparently one potty-mouth less has access tho this group from his ISP. So the rest of you sewer-mouths take your best shot. I'll be more than happy to forward your filth to your ISMs as well, I just won't lower myself to responding to your garbage in this NG.

Mess with the best, end up like the rest.

73 and good DX'ing,
John D. Kasupski

With all due thanks for your support of my position on the issues, OM,
nobody ran me off the CB band and nobody will. I still operate on 11
meters - a fully legal operation, just like I have for the past 24
years - and I will continue to do so. I'm not the type to type to give
in to a bunch of morons. I'd rather stick around and give 'em hell.

>if it is so simple then go and git you amateur extra
>and forget about the dumb old cb band as you say

Yep...it's always simple to these jerks. That's why most of them have
never sat for a VE session.

>The splatter boxes mumble
>The splatter boxes hiss
>The splatter boxes crackle
>The splatter boxes torment
>The splatter boxes bleed
>And above all
>The splatter boxes splatter
>Day after day they clutter the band
>And destroy the usefulness of it

And that's just the operators! You should hear what their sorry
excuses for radio equipment does to the bands. :-)

>likely won't hear me because New York and the Cheasapeake
>Bay are in the "skipped zone" to each other. I make

Yeah, sure they are. That's why the USCG Communications Area Master
Station Atlantic in Portsmouth, Virginia comes in here at 20 dB over
S-9 24 hours a day, seven days a week on at least four different HF
frequencies. I think my 11-year old daughter knows more about HF
propagation than you seem to know.

>got my skip fix taken care of. You remind me of the guy that
>asks for a radio check every rime you turn it on. No, you
>remind me of the local butthead that asks for a radio check
>every 15 minutes. He has an Echo-Max 2000 set to max and always
>has that stupid beep on. Wants to know if he's sounding good <:

Well, number one, I don't ever have to ask for a radio check to see
how my radio sounds, I can just listen to my own signal using any one
of the three HF receivers I have here in my shack.

Number two, I do not now, nor have I ever owned or used an echo box
microphone, furthermore, I refuse to even key up to talk to anybody
that does.

>Hey Kaputski, "Yes!, I've had my comms interrupted by skip."

Very good, Snot...er, I mean, Scott...

>Depending on the circumstance, I'll talk to the interrupter,

...thereby notching yet another Part 95 violation...

>give 'em grief, or whatever. Heres a tissue, stop whining.

Nah, you keep it, you'll need something to wipe off your leg with next
time you're at bigradios.com looking at all the pictures of illegal
stuff you wish you could afford on what you make flipping burgers at
the local Mickey D's.

73 and good DX'ing,

>their FCC-issued station callsigns. I recall hearing very, very few
>operators who were not using type-accepted equipment. Rare indeed was
>the individual who ran excessive power levels or deliberately
>interfered with other stations, and nobody used the kind of language
>on the air back then that I regularly hear on the air today in the
>CRS. If they had, I'm quite sure my parents would have forbidden me to
>listen to them. As it turned out, my association with SWL and CB at a
>relatively early age led to my eventually becoming a licensed amateur

>radio operator this September. I now hold a Technician class license
>with callsign KC2FNG...but my purpose here is to address the CRS, so
>please allow me if you will to check my ham ticket at the door (so to
>speak) for the most part. Although I am a licensed amateur, I am for
>the most part concerned with the CB band on which I got my start in
>two-way radio communications.
>
>I, along with many countless other responsible users of the CB band,
>would like to see things return to that state of affairs. We would
>like to see the foul-mouthed, inconsiderate operators gone from our
>band. We would like to see those who run illegal and grossly excessive
>RF power levels removed from the CRS and the interference that they
>cause to other stations removed along with them. Unfortunately, the
>hands of responsible, legal CB operators are tied due to the fact that
>there is a lack of technical expertise for self-policing activities as
>is common in the Amateur Radio Service - not to mention the lack of
>anyone on the CB bands with any standing such as ARRL's Official
>Observers - and also, unfortunately, there is the perception held by
>both legal operators and by those who ignore Part 95 that the FCC does
>not care about the CB band. Thus, short of the undesirable option of
>vigilantism, there is little that decent, law-abiding CB operators can
>do other than to either put up with the violators, or leave the CB
>band entirely.
>
>This situation need not be permitted to continue. The CRS can still be
>a useful, viable alternative to the GMRS or amateur radio service for
>persons desiring inexpensive access to short to medium range
>communications for use by the general public. In order to accomplish
>this, I believe that two things need to be done.
>
>First of all, the CIB must take a more active approach to Part 95
>enforcement than has been evident in the past. It has been noted in
>various discussion groups on the Internet, as well as in recent
>articles in radio hobby magazines such as Popular Communications,
>Monitoring Times, CQ, and QST, that FCC enforcement efforts relative
>to the Amateur Radio Service have been stepped up considerably of
>late. However, the wheels still seem to turn somewhat slowly in this
>regard.
>
>In one widely publicized case, the Tampa District Office of CIB issued
>a Notice of Apparent Liability for Forfeiture to an individual in
>Jupiter, Florida charging one William Flippo with numerous violations,
>including willful operation of an unlicensed station on the frequency
>28.375 in the 10-meter amateur band, willful or malicious interference
>with an on-going amateur radio communication, and failure to make his
>radio equipment available for inspection by an authorized FCC
>representative.
>
>While I was happy to learn of the FCC's action in this matter, I was
>also dismayed to see that this NAL was issued in July of 1999, when

>amateur radio operators in the Jupiter, Florida area had been filing
>written complaints with the CIB since November of 1997.
>
>It is my hope that the new enforcement bureau that began in October of
>1999 will enable the FCC to deal with such violators on a more timely
>basis, but the fact remains that if it took over a year and a half for
>the FCC to deal firmly with a violator who was interfering with
>communications on the amateur bands, what chance do we who operate on
>the CB band have of obtaining any support from FCC relative to
>enforcing Part 95 and helping to clean up the CB band?
>
>I am an individual who understands the value of regulations governing
>the use of that public resource that the RF spectrum in fact is. I
>have always operated my CB station in accordance with Part 95, and I
>always operate my ham station in accordance with Part 97. William
>Flippo is alleged to have intentionally interfered with 2-meter
>repeaters in the ARS, intentionally interfered in the 10-meter band,
>and is alleged to have made false 9-1-1 calls as well as refusing to
>permit an authorized FCC representative to inspect his station after
>that FCC representative used radio direction finding techniques to
>determine that the interference was coming from Flippo's residence.
>
>As a CB operator, I feel that those who behave as Flippo is alleged to
>have behaved, give CB operators a figurative black eye relative to our
>public image. As an amateur radio operator, I find that the ARS
>suffers the same black eye because most people have no idea of the
>differences between ham radio and CB radio. One is perceived by the
>public to be pretty much equal to the other. The public reads about
>individuals who behave as Flippo is alleged to have behaved, and gets
>the mistaken impression that this is how all Cb operators and hams
>behave. Thus my reputation is damaged, however undeservedly, by this
>perception on the part of the public. The same holds true for all
>other amateurs and CB operators who operate their stations within the
>parameters specified by the applicable FCC regulations.
>
>I am sure there are many in both the ham and CB radio services who
>would love to try to repair some of the damage to our reputations that
>is done by behavior on the part of a minority of individuals who act
>as Mr. Flippo is alleged to have acted. We would like to help clean up
>the Cb band so that it can again be a radio service that is useful for
>the purposes for which it is supposed to be used under Part 95. I
>therefore pose the following question to the Commission, on my own
>behalf and on behalf of other CB operators who operate our stations
>legally and considerately: How can those of us who operate legally
>under Part 95 help to rid our band? When confronted with the behavior
>of the buffoons who began invading the CB band back in 1980's with
>their illegal linear amplifiers and noise making devices, what are we
>as responsible, legal CB operators to do about it, as far as the
>Commission is concerned, and particularly as far as the enforcement
>bureau is concerned?

>
>I intend to write an article for one of the radio hobby magazines
>pertaining to this subject in the near future, and would like to be
>able to present the Commission's "take" on this issue to the radio
>hobby community through that article. Any advice that I can pass along
>to the law-abiding users of the CRS, will certainly be appreciated
>both by me and by those users of the CB band who would like to see the
>band cleaned up, as I do.
>
>A couple of recent issues of Popular Communications magazine featured
>articles on what appears to be a somewhat well organized group of
>flagrant violators claiming to run mobile units with blatantly illegal
>amounts of RF power output - we're talking thousands of watts, in a
>band where 12 watts PEP is the absolute maximum allowable by Part 95.
>This group can be easily found on the Internet - just read the Usenet
>newsgroup rec.radio.cb and you will find hordes of violators blatantly
>buying and selling illegal power amplifiers for use on the CB band,
>describing how to modify CB radios for illegal operation on
>unauthorized frequencies, advocating that others totally ignore Part
>95, and even advocating that people operate in the ham bands without a
>license.
>
>They even have a site on the world wide web: http://www.bigradios.com
>is a site which includes AVI format digitized movies of what these
>outlaws call their "shootout vehicles" - which basically are vans and
>sport utility vehicles equipped with multiple high-capacity
>alternators, which power gargantuan RF amplifiers. The site includes a
>picture page with links to digitized photographs of these vehicles. At
>the top of this page appears the following (quoted directly from
>http://www.bigradios.com/shadow/):
>
>Definition of the SuperBowl -- Channel 6:
>
> If there are 10,000 CB'er's on the SuperBowl...
> then out of 10,000 only 1,000 can be heard some of the
>times...
> and out of 10,000 only 100 can be heard most of the
>times....
> and out of that 10,000 there are probably only 10 of the
>most well known
> guys that talk on the SuperBowl and can almost talk skip when
>they want.....
> This is a great example why the bowl is not for the
>weak!
>
>
>In my opinion, ladies and gentlemen, this is also a great example of
>why the CIB needs to start taking a more active role in enforcing Part
>95 - particularly with respect to taking action against groups and
>individuals who flaunt their complete disregard for Part 95 in this

>manner. Here is a group of outlaw Cbers who apparently takes pride in
>the fact that their actions have render a frequency on the CB band
>completely unusable to all but ten of the 10,000 CBers nationwide who
>might wish to exercise their privilege to use that frequency!
>
>One page on this web site is a "marketplace" that includes a page
>devoted entirely to buying and selling illegal RF power amplifiers for
>use on the CB band.
>
>Another page on this web site,
>http://www.bigradios.com/tollfree/calendar.htm has a "Calendar Of
>Events" listing dates and locations where these violators gather to
>show off their illegal equipment as well as buy and sell it. The page
>includes the following thinly veiled threat which I again quote
>directly from the web page:
>
>"What you are about to see is classified information. Tell everyone
>but tell no-one.
> You know what I mean? It could be detrimental to the person
>causing this
> information to fall into the wrong hands. We saw what you did and we
>know who
> you are."
>
>The behavior of people like this is detrimental to the CRS. Anyone who
>has been active on the CB band for as long as I have been, has seen
>what they have done to the band. Anyone who wants to know who they
>are, can find them in the Usenet newsgroup rec.radio.cb where at least
>two of these miscreants has the audacity to regularly post messages
>bearing header information that would upon some investigation reveal
>the Internet Service Provider whose facilities were used to post those
>messages.
>
>I am not suggesting that the Commission involve itself with policing
>what is posted by these individuals on the Internet or with the
>content of their web site, I merely include this information to
>demonstrate to the Commission the complete disregard that these
>individuals display for the FCC and Part 95, not to mention the rights
>of legitimate, law-abiding users of the CB band. Since the web site is
>kind enough to provide a calendar of events detailing where and when
>these violators can be found, it seems to me that a timely visit to
>their "event" from an FCC enforcement team would allow the
>confiscation of this equipment, would allow for a lot of fines to be
>levied for some pretty serious violations of Part 95, and the money
>collected in fines could be used to fund further efforts to enforce
>FCC regulations. After all, by flaunting their complete disregard for
>the regulations under which they are supposed to operate on the CB
>band, these people are daring the FCC to do anything about. They are
>asking for it...so why doesn't the CIB give it to them? Once these
>people get together and start keying up their gargantuan amplifiers, I

>believe the use of a $30 field strength meter would provide all the
>probable cause anyone would need to have reasonable suspicion that a
>violation is being committed. The fines that could be collected would
>total a lot more than $30, and confiscated equipment that was then
>destroyed in accordance with the usual FCC procedures would no longer
>be available to contribute to the chaos that is caused on the band by
>the operation of such equipment.
>
>Furthermore, such an enforcement action would undoubtedly be widely
>publicized, especially in light of the fact that this particular group
>was just featured in two articles in Popular Communications magazine.
>This would serve notice in a very public manner to the outlaw
>operators on and near the CB band that the Commission is getting
>serious about Part 95 enforcement again. A great opportunity exists
>for CIB to score a major financial and public relations windfall
>here...a fact that I hope will not be lost on you ladies and gentlemen
>of the Commission when you read this. I fully hope that you will
>investigate by viewing the web site I have just brought to your
>attention, and have a look at the rec.radio.cb newsgroup for
>yourselves and see how blatantly these people publicize their
>disregard for the regulations, and direct CIB to take appropriate
>action so that the legitimate, law-abiding users of the CRS can see
>that the FCC has not abandoned the band after all.
>
>The second step that I believe needs to be taken in order to restore
>the CRS to a respectable status in the eyes of both the public at
>large and of the radio hobby community, is to amend Part 95 so as to
>make the job of the enforcement bureau easier. Admittedly, the
>enforcement task that the CIB is faced with on the CB band is
>monumental, due to the large number of users on this band, the fact
>that there is no licensing data on this band thus making it more
>difficult to identify violators, and the sheer number of violators
>involved as well as the apparent impunity with which they have ignored
>Part 95 - and continue to do so.
>
>The enforcement task is not made any easier at all by the fact that
>even stations running legal power at 27 Mhz can find their signals
>being propagated far beyond the 250 Km legal distance limit for
>communicating between two stations in the CRS. The fact that the only
>legal modes for use in this band are AM and SSB emissions doesn't help
>things any either since the undesired propagation effects are
>magnified by the use of AM and SSB, as opposed to FM which would be
>subject to the "capture effect" and allow legal operators to hear the
>local stations they want to communicate with, without interference
>from weaker signals propagated by band conditions from beyond the 250
>Km limit. In addition to the above, there is the fact that thousands,
>and perhaps hundreds of thousands of stations in the CRS are crammed
>onto exactly 40 channels. This has led all too many operators to
>unfortunately seek quieter territory in the RF spectrum by operating
>illegally in what has come to be known as the "free band" - i.e.,

>frequencies adjacent to the 40 channels authorized in the CRS.
>
>I have not, do not, and never will operate on unauthorized
>frequencies. However, I can somewhat sympathize with the otherwise
>considerate and responsible operators who seem to find it necessary to
>operate in the "free band" in order to escape the chaos that now exist
>on the 40 legal channels, and which are the result of overpowered
>stations, deliberate interference by some stations with other
>stations, inconsiderate operation by foul-mouthed individuals, etc. As
>a no-code amateur licensee who thus does not have HF privileges, I can
>also sympathize with the "freebanders" argument that they are
>operating in the only place in which they can operate on HF without
>knowledge of Morse Code in order to obtain an amateur radio license
>that grants HF operating privileges.
>
>Although I do not condone the out-of-band operation practiced by the
>so-called "Freebanders" and in fact I object to their operations due
>to the fact that all too often they operate in the 10 meter ham band
>where I eventually hope to gain operating privileges legally by
>upgrading my ham license in the future, I must in all fairness point
>out that aside from the fact that they are operating on unauthorized
>frequencies, the operators who I hear on the so-called "freeband" when
>I listen there on my general-coverage receivers do seem to be a lot
>more considerate and responsible with respect to their other operating
>practices and procedures than do many of the operators who confine
>their operation to the 40 channels authorized by Part 95.
>
>From this, I am led to believe that the majority of the operators to
>be found in the "freeband" regions would seem to be those operators
>who are the most technically adept and thus able to modify their
>equipment to operate on frequencies it was not designed to operate on.
>I think it is somewhat a shame that those people are driven to violate
>Part 95 because the behavior of those they wish to leave behind on the
>"legal 40" has become so commonplace that they feel they must take
>such as drastic step as operating on unauthorized frequencies in order
>to escape the more blatant practitioners of CB barbarianism. While I
>would much rather see these people do a little bit of studying and get
>their ham tickets instead, the fact remains that many of these
>freebanders wouldn't be where they are if it weren't for the rampant
>abuses going on in the legal CB band.
>
>The question, then, as I see it, is one of how to deal with the
>multiple problems that have arisen on and around the CB band as the
>result of the conditions which exist there. I have given the matter
>some thought and have come up what I think is a novel idea that will
>solve two problems at once. It would solve the problem with the CB
>band, and it would solve the problem with the argument in the ARS with
>respect to whether or not we should have no-code HF licensing. Please
>permit me, then, to propose the following to the Commission:
>

>I believe that the current CRS should be reorganized as part of the
>Amateur Radio Service, with station licensing as a prerequisite for
>operation after January 1, 2002. This would give current CB operators
>two years with which to comply with the new licensing requirements.
>After January 1, 2002, the possession of transmitting equipment
>without a station license would be grounds for confiscation of the
>equipment as well as the imposition of fines and/or imprisonment for
>violators. Equipment confiscated from violators would be auctioned for
>sale to licensed users who are authorized to legally possess and use
>that equipment, and the proceeds from those auctions, along with the
>money collected from violators in fines levied by the Commission,
>would be used to fund enforcement of the FCC regulations.
>
>The new CRS that would then exist after January 1, 2002 would be a
>different class of license within the Amateur Radio Service. This
>would of course necessitate a reorganization of the amateur radio
>licensing structure at that time...but since I understand the
>Commission is considering reorganizing the ARS licensing structure
>anyway, I don't see this as a problem. The specifics of the ARS
>reorganization would of course require input from other amateurs, but
>for what it is worth, my own ideas with respect to this issue would be
>to have the following four license classes:
>
>1. Amateur Novice - This would be an entry-level, no-code license
>class permitting operation on HF on the 27 Mhz band only. Authorized
>emissions would be AM, SSB, FM, CW, and PSK-31 data transmissions. The
>band for this class of license would be created by combining the
>current 40 CB channels with additional radio spectrum adjacent to the
>current CRS allocations.
>
>Legitimate users of licensed services in those frequency ranges have
>largely abandoned those frequencies already anyway due to interference
>from unauthorized operations there, so it should not displace very
>many, if any, users from this part of the RF spectrum if the
>Commission creates an 11 meter amateur radio band encompassing, say,
>26.00 to 27.80 Mhz. Sub bands for AM/SSB/CW, FM, and PSK-31 operations
>would be specified - personally, I would advocate having FM and data
>modes sharing spectrum above or below the current 40 channels to
>minimize interference from those modes with existing radios now
>available for CB operation...perhaps adding ten more AM/SSB channels
>below or above the current CB band, and authorizing FM below that
>range of frequencies, and CW and PSK-31 emissions above that range. I
>leave it up to the Commission, however, to determine the most
>efficient method of allocating the available RF spectrum into sub
>bands for the permitted emissions type, perhaps with input from ARRL,
>and/or from current users of this portion of the RF spectrum other
>than myself.
>
>The maximum allowable power levels here would be QRP levels of 5 watts
>or less, to remain in accordance with the ITU treaties that require

>knowledge of Morse Code for operation on HF otherwise. We would retain
>the low-power status of 27 MHz but expand it, authorize more emissions
>modes, and bring it under the auspices of the Amateur Radio Service
>where it would be subject to volunteer examination as a license
>requirement, and thus also bring it within the jurisdiction of ARRL
>Official Observers, which would make effective enforcement possible.
>
>Licensing requirements here would consist of an extremely elementary
>written test only. Applicants would need to know the difference
>between AM/SSB/CW/FM/PSK-31 emissions and demonstrate a knowledge of
>the FCC regulations governing the 27 MHz band on which they would be
>receiving operating privileges. CW, as well as tone-modulated CW in
>the FM mode, would be permitted since it would enable holders of this
>class of license to practice sending and receiving the code for those
>who wish to upgrade their licenses and thus gain more operating
>privileges.
>
>2. Amateur Technician - This would add the privileges of the current
>Technician license to those of the new license class outlined above.
>Holders of the Technician class license would haver the privileges of
>the new Amateur Novice (27 MHz), plus full amateur privileges above 50
>MHz. This, too, would be a no-code license as is currently the case
>with this license class.
>
>3. Amateur General - This would be comparable to the current General
>class amateur radio license. It would require a slow-speed code test -
>perhaps 5 WPM - in addition to the more difficult written examination
>for the General Class license, and would combine 27 MHz privileges,
>full amateur privileges above 50 MHz, and the additional HF privileges
>currently enjoyed by Novice class licensees.
>
>4. Amateur Extra - This would be the same as the current Amateur Extra
>license class, and would allow all amateur privileges on all amateur
>bands.
>
>I believe that this proposal would be a good compromise for the
>no-code HF access debate as well as allowing us to clean up the CB
>band. It allows for funding of enforcement efforts through allocation
>of fines and other monies collected as a result of enforcement, and it
>would allow the 27 Mhz band to be brought under the watchful eyes and
>ears of ARRL Official Observers, thus making enforcement less of a
>chore for the CIB which must currently try to go it alone in that
>regard. And finally, by making the 27 Mhz band a part of the Amateur
>Radio Service, users of this portion of the RF spectrum would be able
>to learn from other hams and discover how to best make use of their
>operating privileges legally, using improved antenna systems and more
>technically sound equipment to increase range rather than resorting to
>higher power.
>
>While I am certain that several details in the above will require

>modification - particularly with respect to the actual allocations and
>band plan within the new 27 Mhz band and the new requirements for the
>other amateur license classes - I think that the basic idea bears
>examining to see whether or not it, or some variation of it, cannot be
>used to remove a thorn from the side of both the Commission, and those
>of us on the CB band who would like to see it again made possible for
>us to use the 27 Mhz band to its full potential.
>
>Admittedly, this is an ambitious proposal calling for widespread
>changes in the current 27 Mhz band. Implementing such changes will not
>be easy. There are, however, probably no easy answers to the problems
>currently existing on this band, and thus, I feel that an ambitious
>initiative is required to return this portion of the RF spectrum to a
>condition that will be a positive value to its users. I feel that my
>ideas will benefit the current users of both the CB band and the
>amateur radio service, in that it will not only address abuses of the
>27 Mhz band in the current CRS, but also provide a clear path for the
>responsible, courteous CB operators who will remain on 27 Mhz one it
>is cleaned up to have an opportunity to advance their standing in the
>newly organized Amateur Radio Service, and thus will benefit the
>amateur community as well.
>
>In the short term, implementation of this or a similar idea for the CB
>band may be problematic, but in the long run, I feel it would benefit
>the entire radio hobby as well as removing a major thorn from the
>Commission's side. Therefore, I respectfully ask and request that the
>Commission give serious consideration to implementing some form of
>this proposal for the good of radio in the United State as well as the
>rest of the world.
>
>Sincerely,

3505. Re: You want a troll, you got a troll!

Newsgroup: rec.radio.cb
Date: 1999-10-30 00:00:00 UTC
From: bkfromva@aol.com
Message-ID: <19991030092346.02904.00000719@ng-cg1.aol.com>
Source record: 7954

Does it make good sense to write, post, mail and publish a request to the FCC officials regarding illegal activities of misuse of radio frequencies, ask them to monitor this news group, then spew the following quoted statement for all to see, including the people (FCC) you want to persuade of your honesty and sincerity........

>
>I will say this...I am not the least bit intimidated by the threat on
>the bigradios.com web site. You morons don't know what the phrase
>"detrimental to your health" even means until you show up here with
>intent to try to back up your ridiculous threat and have to stand
>where I can get you in my sights. TRY to make good on your silly
>threat if you think you are man enough.
>

.................especially the part about "getting them in your sights" and calling names like "morons".

I think..............you should do some more thinking before you send your mail.........your messages are conflicting to say the least.

Bayard Keene
not a ham
not a freebander
have only 12 watt PEP..........feels that a loose tongue does much more harm than a errant radio..............I have an on/off switch

And I think Hollingsworth is a moron, but I don't let that effect how I feel about ham radio. And you should not either. Why let something as minor as this keep you out of the action?

> I may be looking at this wrong but if
> I were to talk out-of-band today and,

You're not looking at it wrong. If that is all you did, and you corrected the problem after being advised, then nobody should complain. And I seriously doubt anyone would. Shoot, I make mistakes everyday on the radio (if you use it enough, you're going to make mistakes), and so far nobody has complained.

But there is a big difference between an honest mistake and an intentional effort to cause problems on the radio. I have never heard anybody ever file a complaint on the first and I think people should report the latter.

I don't have those types of problems where I live (near Seattle). Around here people on the radio get along very nicely. But, even though

I have not seen it, I'm not for a moment going to say that it does not happen.

Amateur radio does not live in a vaccuum, Miles. Many of the problems that exist in our society exist in Amateur radio. And we're certainly not all angels. Both good and bad people use Amateur radio also.

But there are also many of us who value Amateur radio highly, and are prepared to fight to keep it under control. Understand that we're not doing this out of some higher sense of morality (at least I'm not). Many of us just realise that Amateur radio has a great value to us and we want to keep that (in other words, we're doing this out of pure self-interest, or selfishness if you prefer).

That self-interest keeps us from ignoring the rules. That self-interest keeps us on the watch for trouble-makers. That self-interest keeps us fanatically pushing ham radio. It's all self-interest. And I don't think there is anything wrong with that (many people push the things that interest them).

I like CB also. It has value to me. The people I talk to on the CB radio have value to me. And that is why I am sad to see CB go down like it has over the last few years. Perhaps I can't stop the actions of the masses on CB, but I can control my own actions. And I can try to keep it out of ham radio before it becomes the norn there.

Can I stop it all? Can the others who feel like I do stop it all? Certainly not (which is why self-policing is not perfect). But we can resist. And we can stop some. And that alone may be enough over time.

By the way, Miles. I'm not that far on the other "side of the street." I've been involved with CB since the mid-eighties (KBEO-0299). And I do not intend to give up my CB radio just because I also have a ham radio.

Nobody is following you around, Jeff. You seem to forget that many ham operators also own CB radios as well. Because of that, we have just as much right to be here (this newsgroup) as you do.

But, since we're also ham radio operators, we also occassionally bring that up also (especially if it relates to something that was said in this newsgroup).

John well spoken from a no-code tech! I am sure the commision will head your warnings Just because you said so. I'll bet the FCC has filters in there e-mail program as well and I am sure yours will get trounced too. i THINK THE WHOLE NEWSGROUP IN gENREAL SHOULD E-MAIL THE SAME FCC COMMISIONERS with Some of Johns recent posts and his agenda of attacking certain p[eople from the newsgroup especially his threat of violence where he obviously is refering to use of a gun in his statement of " where I can get you in my sights. TRY to make good on your silly threat if you think you are man enough" Getting you in his crosshairs so to speak, Hopefully they will then blow him off for being a jackass with to much time on his hands. Anyone with access to www.qrz.com can get Johns address by putting in his call sign in then you can mail him your feelings since he will not answer you thru e-mail, this may be your only attempt to reach out to him or perhaps you can stop over for coffee if you live in his area and talk to him, but watch out he carrys a big gun so look for the laser dot on your chest while walking to the door, he may mistake your dual band ht for a weapon

3512. FOR TRADE: CCTV Cameras for Ham Gear

Newsgroup: rec.radio.cb
Date: 1999-10-30 00:00:00 UTC
From: K8TJ <tje@usol.com>
Message-ID: <hPgaOHbgHnj0fnYKiaAI=E=MlHqQ@4ax.com>
Source record: 7961
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.amateur.equipment

I have seven (7) Panasonic WV-1414 CCTV cameras with lenses all in fine working condition that I would like to trade for some type of ham gear. A picture of one of the cameras can be seen at:

http://www.usol.com/~tje/pancam1.jpg

They require 24 VAC power. I can also provide power transformers for them if needed and the right deal comes along. These cameras are used but in great operating condition. Please email me with what you have to trade. PLEASE NO converted commercial vhf/uhf stuff.

Amen!! Tell it like it is, John. Could not have said it better myself.

It's a shame that people who advocate anything positive in this society are dismissed with silly phrases like that above. No wonder this country is going to the pits.

hmm...

"Since my cock is smaller than everyone else's cock, and women don't like a small cock, I will become, in entirety, mind, body and soul, a complete cock".

Maybe if you would have restricted your rant to a couple of paragraphs, instead of showing that you spent days, methodically attempting to undermine the entire CBRS (not CRS, CBRS) they would take you seriously.

Now, with what started as a good letter, you are showing a personal vendetta to the people of rec.radio.cb, which makes you not a troll, but a flamer. If you don't know what a flamer is, I suggest you look it up on the USENET FAQs.

So, John, have a nice day, and fuck you. You deserve it.

Toll Free

We have ours done every six months so as to be as accurate as possible for our
customers. We use them on our work benches.

That is funny... Sending a Dosy off every 6 months to be calibrated.

Just think, in a year, you could have bought a used Bird. In another year, you could have bought a few used slugs.

The Dosy is an innaccurate pile of fommunda... And you say benceS... Implying multiple.

Tell you what. You send me those meters every 6 months, I will recalibrate them, to Bird specs, and wil charge you half.

Toll Free

> a linear" or " I don't approve of
> the use of linears, <snip>

A superior antenna system would serve you better than a linear, which is why I do not use a linear. Perhaps I could transmit farther with a linear. But, unless the other person way off in the distance also has a linear, I'm not going to hear him.

And, if I cannot hear people as far away as my radio can transmit, I stand a good chance of interfering with the conversations of others (and never know it because I can't even hear them talking).

Instead, give me a good antenna system anyday. With a good antenna, I can be heard over greater distances and hear the people who are responding.

I have an excellent antenna system right now. And I have no problem talking over the noise. And when the noise is down, I can talk over an amazing range. In fact, I routinely talk to people my neighbor, with the linear amp, cannot even hear. Oh, they can hear him with the linear. But he cannot hear them. So, he can only sit and listen to my side of the conversation when we're talking.

I have tried to talk him into trashing the linear and getting a better antenna setup, but he is too stupid to listen. He seems to think it is cool to use a linear, and does not want his friends to look down on him because he does not have one. So, he hangs on to his linear, makes a lot of noise on the radio, gets people mad at him for interfering with their conversations, and misses out on those truly great distance contacts.

And, for me, the ability to catch those distance contacts are more thrilling because the catch is made because of my skill (operating skill, antenna skill, etc.), not because I can flood the airwaves with a linear. Anybody with a few bucks (even a moron) can buy a linear and flood the airwaves. It takes skill and knowledge to put together a good radio station (which does not need a linear).

I had this happen to me too. In my case, the two "bearings" that held the meter movement were too tight. I took the meter apart and everso gently loosened the front bearing (actually it is a jewel) with the screw and presto, it came back to life.
I wouldn't recommend degaussing a meter. They use a permanent magnet and if you reduce its magnetism the meter will read in error. One last thing. Much as I love analog instruments, I use only digital meters now. Analog meters simply load the circuit down too much in many cases. This is especially true of CMOS circuitry and when measuring things like 0.6Vdc bias. I would highly recommend Fluke meters. They are deadly accurate, the batteries last forever, and they are made in the USA.

> operation.

In some areas, local police are already taking action in this area. They are using the premise that the "illegal" operator is depriving the neighboring homeowner (the complaintant) of the peaceful enjoyment of his/her home. Many states already have laws on the books supporting this premise, so it is fairly easy to charge the "illegal" operators under one of these statutes.

This also applies to the "illegal" operator depriving the radio operator of another radio service (the complaintant) of what is legally his/hers (the radio frequency). Again statutes exist in most states that support this premise.

Note that both of these are not based on the actual radio itself, but on the results of the use of that radio (hince avoid FCC entanglements). Let me give an example that might explain this idea better.

If a drunken pilot, operating his aircraft in a dangerious manner, were to crash his aircraft into a town, the local police would not have to go through the FAA to charge the pilot with violating a whole range of local statutes. In other words, they are not going to charge the pilot with violating FAA rules - they are going to charge him with operating a vehicle in an unsafe manner, reckless endangerment, etc.

Why should this idea not also apply to the "illegal" radio operator? They are not charging the operator with violating FCC rules. They are charging the operator with violating local statutes which apply to all who live in that community.

The measure currently before Congress would make the process a lot easier (less stretching to make local statutes fit the problem), but is not absolutely necessary to police local "illegal" operators.

What does not exist in most police departments is the expertise to hunt these "illegal" operators down. However, some states are waking up to the idea of using outside individuals, such as Amateur radio operators with RDF skills. Others are turning to outside agencies with RDF capabilities, such as the Coast Guard, Coast Guard Auxiliary, Civil Air Patrol, certain military radio facilities, and others.

Just like all the people who carry cellular telephones?

> They all have home made antennas that
> suck and have them way to close to
> each other and have to use antenna
> tuners to get the swr down.

The antenna tuner is to help our antenna systems cover the huge range
of frequencies at our disposal. No antenna can cover the range of
frequencies, so an antenna tuner is used to match an antenna to the
frequencies we use less often.

> They use junk equipment

My FT-847 would smoke your cheap CB.

> and don't know anything about electronics.

Forgot more than you will probably ever learn. But, since it is
illegal to even open your CB radio, electronics is not required for CB.
For that matter, it is not really required for Ham radio either. So why
bring it up?

> They are all just want-a-be CBers.

Not a very good attempt at a troll. Perhaps if you learned a little
more about Ham radio, you would be more effective.

> Whats the difference between a Tram D201 and a D201A?
>
The major difference is the D201A is a 40 channel rig, while the
D201 is 23 ch.
There are some major changes inside as well, including the new
style boards and extra xtals to go 40 ch.
On the boards they didn't completely change, they made revisions
and changed or left out some components. One notable change was on
the main audio brd. This change was inspired by a pyromaniac. He
left out several resistors and a fuse that provided some protection
to the hi power audio tube. This change ended up burning up several
of the D201A's, literally! The component holes are still there and
if you have one of these you might invest a couple bucks and a few
minutes to reinstall these components. It doesn't hurt the
performance and ensures no fires.
There were some subtle changes on the D201A. The meter circuit,
which on the older one was unstable, now uses an op-amp instead of a
tube.
There were at least a couple D201's also. The old original had
no pcb and incorporated a VOX circuit which you can see the controls
for on the front panel.
These were all great AM rigs and still today can stand up with
most any export. They were not great SSB rigs although with some
time and patience you could make it decent.
Hope this gave you some useful info. BobC

Hmm, I think your missing the point. People freeband so they don't
have to play ham, thats the whole point. Some people just want to
talk on the radio and not go the route of the whole geeky ham radio
fraternity.

Source record: 8008

Debbie,

I commute rt 80 in NJ and my wife and I really find 85% of the drivers polite, helpful and above all, extremely funny to listen to and talk to. Unfortunately, there is an erroneous opinion in the general public that CB in general and drivers in particular are nothing but profanity. I've found mostly the opposite to be true. Granted, when we come up on a convoy, yeah... it might be a bit intense, but when she keys up, they suddenly tone it down and really humorous banter starts. She is courteous and polite and also loves to joke around, the drivers respond in kind. I think that's quite normal human beheavor CB or anywhere else.

Greg

browser is share ware name of it is "free agent"
the other stuff like email stuff comes with the internet junk
the windows 3.1 came with the computer
and all of the other stuff is share ware junk
i hit the share ware places hard

and even if some one did the only person that is
involved is the dude pirating the software
but on cb it involves everybody

if you are talking about modifying a 10 meter radio to operate on the cb band
it is legal to do but you can not transmit on the cb band with a non type accepted
radio to do so is illegal

Is this group for CB'ers only or both? If not, how do I get into the Ham newsgroups? I'm a CB'er but interested in what Ham radio holds.

A little revisionist history? For the record, #12's
e-mail account was cancelled by his employer
(Lucent) after he was discovered using it
to conduct the equivalent of a "design/repair clinic"
for illegal CB amps - on company time.

you are not a geek just because you know how to hook up a coax
to the back of a radio
like people don't know how to read a dip stick
to many people don't want to know any thing or be
associated with any person that does
heck most people think people that run cb,s are geeks
people will just have to get over junk like that
we should be teaching basic electronics in high school
we live in 1999 not 1950 we are in the electronics age
the schools should teach appropriately

Radio Shack has a new 10 Meter radio AM/FM/SSB. 7 watts AM, 25 watts FM/SSB called the HTX-10, (not 100). Looks as if they took the advice of all the old HTX 100 users and put in AM, both USB and LSB, and FM splits for repeater use. Anyone know the PLL chip and if there is any data on expanding it's freq coverage? 28.000-29.669 is standard. $149, not bad.

Yes, this is the same stupid fuck that I ran off a little over a month ago.

He came out and tried to tell everyone that his 9 dollar JCWhitney antenna was better than anything else made.

He is still a stupid fuck, and quite obviously, always will be! Judging from the fact that he cannot learn or has chosen not to.

Typical poster child for fetal alcohol syndrome.

C'mon and tell us how you build cars and big radios and how everyone gives you their Wilson, and although the Wilson is the shittiest antenna on the planet how you cut the stinger and they make a kick ass 6 meter antenna.

Don't worry, we haven't forgotten who you are, you stupid childish shit.

Changing your tune after you got run off the CB newsgroup last time, are we?

Still think that the Wilson is a pile of shit?

People still "banging down your door" to trade in their brand new Wilson 1K antennas in trade for your JC Whitney specials?

>
> >So, John, have a nice day, and f&%$ you. You deserve it.
>
> that is original
> can you think of any thing better
> than that

Why yes, I can. However, it appears that you are nothing but a mina bird, and why would I want to give you anything that even remotely resembled an intelligent remark, when all you would do is attempt to comprehend what I was saying, and have an aneurism in the process?

>
> like giving some reasons why higher power should be allowed
> on the cb bands

Because the 4 watt limit would NOT let someone talk across the city of Houston, and I would like to be able to talk to my wife, mobile to mobile when we are travelling to / from work.

With 4 watts, it just won't happen, Jack! Hell, Houston is so big, that there are some repeaters that I can't get into with 10 watts!

> i do not mean for skip and other junk

Junk, eh? Since when where you appointed to be the man that had final approval of what was junk and what wasn't?

I use my radio mainly for skip, but also locally. I would say that the major portion is for skip. Why is that "junk"?

Or, more to the point, and the truth I would think, did you use the word "junk" because you could think of no other modifier (adjective) than the word "junk"?

I believe it was.

> but why for any reason should high power be allowed
> on the cb band which will follow along with it,s intended purpose

Once again, we have confused you by using proper punctuation, I see.

Sorry. That sentence makes absolutely no sense.

> if so tell the fcc your idea if not then do not yell at us for trying
> to tell people to not use amps

Why do you (people) always insist on us not telling you what to do, when it
is us rebelling against you telling people what to run and what not to run?

Is what is good for the goose no longer good for the gander?

Go get a real ham license, then come back and talk to the rest of us.

Have a good day, kid.

Actually, Joe, nothing of what you say is true.

I suggest that you attempt to find out the facts before you spew, because comments like this can be thought of as slanderous.

That has to be the most true comment that I have read on any newsgroup.

Tandy always seems to be selling Uniden when the cycle comes up!

So then you believe that just because you have nothing to gain by cleaning up software piracy we should not discuss it?

Hmm... Seems we hit a nerve with that one.

Too bad. Looks like we found a weak spot, although I doubt this piece of white trash would know how to FTP to his own ISPs machine!

Telnet / Shell Account... Words of the day.

From: anonymous@cotse.com
Message-ID: <199910310218.WAA03990@cotse.com>
Source record: 8040

What are the best ways to get the "export radio" version
of this radio in the US that includes CB, 11M, etc?

Are there dealers in the USA that sell the George with the
expanded frequency and mode? If so, which dealers?

And, would these be the factory export version or the USA
version modified?

I found if youre not into this it's not obvious how to do
it so thanks for your help.

Well, I guess you wouldn't... If memory serves me well enough, you believe
that because you can rebuild a carbuerator, you can also build all antennas,
work on all amplifiers and radio, and believe that JC Whitney antennas beat
a Wilson!

Another myth is "all truckers run amplfiers". Very few care about that stuff. Most just want to get out as far as across the median strip. I would be surprised if even 40% even bother to get their radios tuned. Line of sight is usually all that matters to most. Right out the box is good enough for most.

Invert that group and thats pretty much it.
I hear that the Midland 79-290 is the greatest thing since sliced bread.
Haven't had the pleasure to own one yet.
Uniden Grant is nice PC- 122 is good too
Cobra 148 in the right hands can kick ass.
Good luck and good night.

The funny part is someone throws out a bunch of statistics and numbers that don't have any fact to them and everyone seems to believe them, Just because you cannot hear someone doesnt mean they arent talking on the bowl to someone else who you cannot hear. Its a game of condition and postion, If mother nature doesnt lift her skirt up and allow you to sneak on in I don't care how long and how strong your station is. You cannot talk to West coast if conditions arent in your favor you'll be stuck talking to the Bayou,Big Horn, and the Mag if thats where it is rollin....

Are there any decent CB shops in NJ? (excluding Buzz Bros, Community
Communications, and Advanced Specialties.) It's hard to find an honest shop
with an owner that doesn't have an attitude problem.

Thanks a lot.

Single Side Band is a derivative of AM.

If you really want to get something that is "with the times", there are
other modes of transmitting a voice.

Oh, by the way, all of you people who like to log on to the FCC website and send them email about illegal operations on 11 meters, I hope your not using any software that was pirated because as soon as you log on to the FCC website, it will set a cookie which will examine the windows registry and send them a list of illegally copied programs on your hard drive.

Just thought you like to know because pirating software is a much more serious crime than talking on 11 meters with to much power....

>Also, Any mounting ideas?

How about getting a chimney mount from Radio Shack. This is the kind
with the stainless steel straps that would go around the tree and
connect to a mast holder. Then, get 5 or 10 foot section of antenna
mast and mount it using the U-clamps.

Can't seem to squash discussion of "legal
operation" here on the newsgroup, eh, Toll?

Too bad. You'd like the Newsgroup to be your
own private little club dedicated to keydowns,
power, and thuggish boasting about "who
is the loudest and proudest".

But the John Kasupos and the Dwight Stewarts
keep appearing. The idea that your practices
are rude and inconsiderate, and are ruining the
CB band for other users, is expressed again and
again and again.....

don't worry about it , a lot of times people won't talk to you even if they hear you , it is a political thing, as it is in a lot endeavors in life. but if you get a big enough station pumping those watts , oh you will be heard and you will be answered. it is a power trip and if you make it hard on their ears , they will answer you , but you got to do the job right, or forget it. i still say a 50,000 watt simulcast of the rush limbaugh show would do the trick, and be somewhat humorous at the same time. can it be done. yes it can. will the tube run hot , not if you got it cooled correctly. just take a tour of your local commercial radio station and see how its done. just my thoughts on the matter,.....icm out.....

i can't believe kasupski is going to write that letter. i think he is one of those guys who can't figure out where he belongs. i don't know for sure, but he has probably run out of rope on the ham radio ng, so now he is here. it is that kind of legalistic bs that pissed off number 12 and caused him to get the hell out of here , so now this saga continues, oh well. maybe kasupski will get a life someday. frankly he reminds me of a rat. somebody that is a tattletale and runs and tells the teacher everything he sees and hears. you dance with the devil(the us government) and you will pay the consequences. that sob will come around and bite you in the ass. the best thing to do is if you hear something you don't like on the cb band, johnny old buddy, just go to another one or turn it off. this crap of running to the fcc will backfire someday and maybe sooner than you think. they may just outlaw all radio operations by civilians. how do you like them apples johnno. farfetched? me thinks not. how are they going to keep control on a civilian population when they start this new world order nonsense? think about it mr ham guy. take that pickle out of your mouth and put that in your pipe and smoke it,.....icm out.....

Man what a lot of typing, happy e-mailing, you will not be the first, I am happy to say that I run my radio station completely legal, the only piece of equipment I own that is illegal is a a cobra 2000 with the modulation limiter removed, and I cannot run it because it interferes with my neighbors computer speakers, oh yeah and my antenna is a little higher than rules allow 61' to the top.

1 at least you can hear the people talking
2 there is only one or two groups of dimwits
3 they do not splatter +/- 500kc with dirty linears
4 it is limited to the USA and surrounding aria

one the cb band
1 there is 40 channels of dimwits
2 the dimwits trash the band for 12 to 15 hours a day
3 you can not hear a thing but jdlsajflkdjlkajfojlkfj;oajfojaskfjl;aj
4 each one of the big wads splatters over +/- 500kc
5 even at night the local kilowatt wanabes think there big
6 and they even splatter a good chunk of the band around +/- 100kc
7 the cb band is trashed world wide
8 they even go outside the band to spread the chaos from 25Mc to 28Mc

Who is this Rick Bullon ? What a bunch of horseshit!! Riley Hollingsworth does not exist. I refer to him as the Wizard of Oz. This fool is trolling the CB Web Rings looking for illegal activity. A group of Hams? a group of one is more like it. FCC has got more to do than worry about the Superbowl functions. Hell they can't even control the Hams on 3.950. The facts are:

1. hams lost 11 meters for lack of use.

2. they spend way to much time worrying about 11 meters.

3. most hams are ARRL dupes and stooges.

4. most of the superstars on the bowl do not give a rats ass about RCI 2950s and freeband operation.

5. I will bump down on the bowl when i feel the need. In short Mr. Bullon can kiss my entire ass.

hello, ... sorry, i�m perhaps wrong with this group... i listend to a 11-m-dx and there was someone who decribed his antenna in brasil as some wires in the trees like a yagi, but the wires more than 2 or 3 lambda long, with resistors at the end. i did not find anything in the literature and i don�t know any software which is able to construct yagis with more than 1 lambda.... is that possible? does anybody knows exactly how to construct such a monster-yagi?

ciao udo
#
ich habe k�rzlich ein 11-m-DX geh�rt, in dem ein Deutsch-Brasilianer seine Antenne beschrieb. Wegen fading leider unvollst�ndig. Nur soviel: Mehrere zig Meter lange D�hte zwischen B�umen/Palmen gespannt und das ganze wie eine yagi aufgebaut, mit Widerst�nden an den Drahtenden?!? In der Antennen.-Literatur habe ich nix Vergleichbares gefunden. Und ich kenne auch keine Software, mit der sich yagis berechnen lassen, die mehr als 1/2-lambda kennen... Wer wei Rat? Gibt s sowas berhaupt? Wer kennt eine Aufbauanleitung?

Tsch Udo

I think you misunderstood me. I like talking about geeky stuff like
antennas, and propagation, etc. What I know is that most people don't
and they won't get a ham license because they don't want to be
indoctrinated into geekdom. Although, they might still want to talk
on the radio, and they may still be interesting to talk to.

>but on cb it involves everybody

Sorry, I don't think so. Software piracy causes the loss of billions of dollars every year to the software industry. Talking on 11 meters really doesn't hurt a flea.

I'm willing to bet that probably every licensed ham radio operator has at least on pirated copy of software on his or her computer. Yes, this is a blanket statement with nothing factual to back it up, but this is my opinion.

As a matter of fact, I'd even go so far as to claim that FCC personal have pirated software on their office and personal home computers.

So, before people go bad mouthing 11-meter operators about operating outside the law, take a look at your own PC's and see if your operating within the law with regards to your software.

It has been years since I was active in CB radio except for my old radio in the car for trips. Now I need to install a radio in my motorhome and I need to know how well the brands have fared over the years.

I want to use a SSB and the brands from the past that are still around are:
Cobra (was top of the line)
Uniden (was just below Cobra)
Midland (pretty much midrange back in the past).

How do these stack up today and should I look for a different brand now?

Does anyone out there in California remeber the OZ club? It usuallly met up on the freeband and was run by OZ#1 Bob from Burson California. Anybody on the west coast with any info on this former club would be appreciated.

Going to take my test next saturday and if you are what is to be
expected on the HAM band, then I might as well stay where I am at.

Sent via Deja.com http://www.deja.com/
Before you buy.

>>on the cb band there is 40 channels of dimwits

>This is just plain false!

You are both right.

What you hear on 11 meters depends on what part of
the country you are in. Many rural areas have polite and
friendly groups on the air. Many cities are one, huge,
hopeless, RF trash heap. Most places are in-between.
Sadly however, it seems that the "trash" is increasing.

you do not get it do you i was just trying to drive you nuts
when you told me to learn to spell i just started to jumble letters on purpose
like sowe for so and so forth
and you are starting to hipper ventilate like you did then
so just calm down and have a pepsi or something
i am just voicing my opinion like i do on the air
i do not care what people think of me i just feel
like wasting my time having a good scream with the people hear
just trying to slow down or deter amp users and noise toy people
kind of like a person jumping in front of a runaway train trying to
stop it but this is far less deadly and a lot funnier

>word "junk"?

well it hampers other peoples use of the band and generally annoys most
so what would you call it
1 junk
2 a spreading scab
3 eye sore that will not go away
>
>I believe it was.
>
>> but why for any reason should high power be allowed
>> on the cb band which will follow along with it,s intended purpose
>
>Once again, we have confused you by using proper punctuation, I see.
>
>Sorry. That sentence makes absolutely no sense.
>
well the intended purpose is for local communication
high power amps will clutters the band so that will go against it's intended purpose
noise toys waste bandwidth so they are against the intended purpose
shooting skip is not local communication and clogs the band so it is against the intended
purpose
>
>> if so tell the fcc your idea if not then do not yell at us for trying
>> to tell people to not use amps
>
>
>Why do you (people) always insist on us not telling you what to do, when it
>is us rebelling against you telling people what to run and what not to run?
>
i tell you to keep it legal people should have no problem with that
you say you should be able to run amps if you want to but that
unnecessarily clogs the band to the point i can't use it
that goes against my authority to use the band
as specified by part95

>Is what is good for the goose no longer good for the gander?
>
>Go get a real ham license, then come back and talk to the rest of us.

this has nothing to do with a ham license we are on the cb newsgroup
amateur radio has nothing to do with it
i am talking as a cber that is fed up with the cb band clogged with skip
shouters

Did you know that if you stack 4 beams on top of each other and drive them with 1 Watt your effectively doing 100 KW or more? I you drive it with 100 Watts your effectively radiating 10 MW or more. This with a unbelievable front to back ratio, meaning that you can hear a cats whisker whistle in the wind and if you can hear it you can operate it!

The frequency coverage of this rig is 26.065 - 28.755Mhz all mode, the modification to these frequencies does not require a internal manipulation and can be reprogrammed by a code on the frontpanel. Unfortunately I do not no this code.

Lois, are you saying that your husband threw people who were advocating law-abiding behavior out of the VFW hall? Nice guy you married there.

I know. I repair the radio's for em. In my part of the country if you get on a radio and your a female, you have to listen to lot lizard stuff from the male.

I have even had one tell me they were coming in to kick my ass. I didn't say anything but hi. So I told them to come on. Those are your microphone warriors. I don't use the language that is common on the cb radio and I don't condone it. I don't tolerate the Lords name being taken in vain either.

For sensitive people was who the message was for. I let a lot slide off my back as well. But I have to listen to it 10 hours a day. Thats why we don't put a base station up at our house.

Have fun. Thats what the CB is for. That and safety.

> in what Ham radio holds.

Depends on what you are interested in - there are more than a dozen
Ham radio newsgroups. Try some of these...

rec.radio.amateur.misc
rec.radio.amateur.homebrew
rec.radio.amateur.equipment
rec.radio.amateur.antenna
rec.radio.amateur.dx
rec.radio.amateur.space
alt.ham-radio.vhf-uhf
alt.ham-radio.dxing
alt.ham-radio.eme
alt.ham-radio.hf
alt.ham-radio.marketplace
alt.ham-radio.mods
alt.ham-radio.ssb

...or search for other ham radio newsgroups. Again, there are many
others (some more active than others).

You might also want to check out my web page (click on the link
below). It contains some information about Amateur radio and how to get involved.

Also, I'll be glad to help with any specific question you might have.
Feel free to send email anytime.

Hello Toll Free: Tell Dennis hello, and that he is missed. And we all want him back on rec.rdio.cb I still have some of Dennis postings in my P500 file book, and they have proven to be dead nuts on.

The Penetrator 500 project is going ok with anticipated problems. But the
bugs are being worked out, in time. Right now there are two Proto-Types New Design (ND)P500 5/8 wavelength, 4 ground radial, antennas are up, and being testing. I have pictures being processed showing 3 antennas up at the antenna fence. (A chain linked fence I have attached the antenna masts to)

You can see the New Design P500 at Woody World CB web site, just click on the "Reader Mail" section on the left. Also, be advised, Woody's web site gets better with time, and it is well worth the time to visit with Woody.
Tell Woody Jay sent ya!
http://www.cbgazette.com/gaz2.html

Jay at jay123a@qnet.com .... In the Great Mojave Mojave, just down the road ah ways from the fillin station.

Is there any way for something that high up not to be a lightning rod?
I think that if I use as little metal as possible that it will be less of a threat. I think I'll whittle an 10 - 15 foot length of oak pole, possible a stair handrail, to mount the I-MAX and use 8" lag bolts to secure it to the tree. This would minimize the usage of metal in such a dangerous situation.

I also will investigate in-line lightning arrestors and switches that direct any strike to ground when the radio is not in use.

Still haven't got the antenna so I'll wait until I get a good design. Lots of help from the NG... Thanks keep the ideas coming!

Each brand has good equipment. In other words, there is little
difference in the equipment quality. Instead, shop for features, price,
and whatever else fits your fancy.

Having said that, I think the Cobra overall has better SSB
performance. The 2000 base and 148GTL mobile are about as good as it
gets. The 148GTL mobile could use a serious make-over - it still looks
like something out of the 70's.

But I should also point out that many of the Uniden radios are using
the same electronics as the Cobra radios, so should sound just as good
(but don't in my opinion - Uniden must tune them up differently).

However, the Uniden Washington is sweet, and worthy of consideration
(the Grant is not bad either). Both of these once were sold under the
"President" brand name, but are now sold by Uniden.

Midland does not support SSB as much as it did in the past, so seems
to be slowly falling behind in performance in this regard.

Hello N9wos: Dead wrong! There's a mod out. I think they did it to annoy, you, seems to be working. Good deal.

Do you really believe your unfriendly and snotty ways are going to change people in the CB Radio Service. Your postings are about as effective as waving a red lantern at a run away train. But the thing that's amusing is that you won't change or try understand how to talk to people. Why is it that so many hams are snotty and unfriendly? Think people are going to want to study the code, technical material, and invest money in radio equipment to talk to the likes of whiners and complainers like you?

Get a like and grow up. You'll be happier and might get laid once in a while.

Jay in the Mojave

The "hams" lost the 11 meter ham band because of a lack of use of that one band - the "hams" were too busy using the more than twenty other bands they have (and we have the CB band to use also).

Don't you wish you had that many frequencies to operate on? The two meter ham band alone is over eight times larger then the entire CB band. Its not that hard - get a ham license. But that would mean that you would have to obey the rules - something that I just don't think you are capable of doing.

> 2. they spend way to much time worrying about 11 meters.

I think you mean the Citizens Band, which is not part of the 11 meter band. Under international agreement, the 11 meter band spans 25.670 MHz to 26.100 MHz. The CB frequencies don't fall within that frequency range.

If you talking about our concern about CB, then we can discuss that. We (the "hams") also use the CB occassionally, so we have a right to be concerned about it. Enough said.

i couldn't have put it better myself. but it would be unwise to not pay attention to the fcc. they may return to the days of the 1970's. of course they would need a massive manpower increase and a accompanying increase in their budget to accomplish this. since the advent of the computer age, they are most busy and do not have the time, money or manpower to police the 11 meter band, but i will stay vigilant. i don't trust governmental agencies. who would have ever thought that american tanks would be used in a police action against a religious group, so who knows,.....icm out.....

Anything above man made structures is a potential lightning rod. The only thing you can do is lessen it's attractiveness.

Lightning arrestors don't do squat. Strong Earth ground is your best bet. I run solid 6 or 4 ga. copper wire from antenna mtg brkt to 8ft copper grd rod, and inside coax when not in use is screwed into a SO239 which is connected mechanically to a solid 6 or 4 ga grd wire to outside grd rod.

IMO, If you're going to take a hit, you're going to, there's nothing you can do about it. The best you can do is make your setup a less attractive path than anything else around it.

President George extra Channels

1)Put power on the george while pressing power+ nb/anl + programm +dimmer.
2)The radio turns on when pressing these 4 buttons.
3)The g turns off after a while pressing the buttons.
4)Release only the power button.
-the g turns on again.release the 3 buttons.
-the dilplay now looks very funny.press 1 times up then 1*down then DW and
then M1.
-the g turns off again.
-turn it on by pressing power,then press DW.

> Its not that hard - get a ham license. But that would mean that you
>would have to obey the rules - something that I just don't think you are
>capable of doing.

do we wish we had that many freqs to operate on? No. if we wanted to be a 2 meter nerd and talk to others in our area on repeaters then we would go to radio shack buy a book and study for a day and get our ticket. people are always making the assumption that cb'ers cant be hams for some reason. the truth is most do not want to be hams because of the ass holes like you guys that always show the elitist attitude. 2 meters isnt 8 times bigger because we operate anywhere between 25 and 28 megahertz anytime we feel like it.

>> 2. they spend way to much time worrying about 11 meters.
>
>
> I think you mean the Citizens Band, which is not part of the 11 meter
>band. Under international agreement, the 11 meter band spans 25.670 MHz
>to 26.100 MHz. The CB frequencies don't fall within that frequency range.

you are more stupid than i thought. apparently you have been looking at a short wave chart since you quoted 11 meters as being 25.67 to 26.10. just by that simple comment you show you inablility to check things for yourself. this means everything your here stating and standing for is probably something you heard you local hambo on the repeater say and your trying to be just like him. it seems like techs are the only class of hams that come here and act so holly and i find that funny because most real hams dont even consider a tech to be part of the amateur world. i guess the hams have too much time on there hands and spend it worrying about whats going on 120 megahertz below them.

> If you talking about our concern about CB, then we can discuss that.
>We (the "hams") also use the CB occassionally, so we have a right to be
>concerned about it. Enough said.

your a newly liscence technician class ham. hell you cant even talk to hams in other parts of the country or world unless you get some rare vhf dx or work a sattellite for a bout 10 minutes out of every 6 hours so you definetly cant

speak for the others. the nerds on your local two meter repeater are not a reflection of real world hams or there opinions.

>Dwight Stewart
>Amateur Radio, Technician
>F.C.C. License: W5NET
>www.qsl.net/w5net

wow thats a pretty official looking signature for a tech. i copy code in my head for fun and to once in a while communicate on 11 with it, i bet your one of those guys upset because you have to learn it. hopefully youll never get it down because a ass hole like you doesnt need to be heard around the world. if you talk to a guy in Z2 land will you tell him to turn down his amp because he's tearing up the band???

The real issue is a Ham sending out threating e-mails such as the one
referenced in my first post. If Hollingsworth has a problem with my
operation on the Superbowl then i am prepared to pay the price.
What are you and other Hams doing to clean up your own bands? Nothing i
expect. We have General class license holders here who incite fights on CB
then run up on 146.925 and rebrodcast the transmissions. This information
has been brought to the attention of the club who maintains the repeater. NO
ACTION has been taken. However the same group has members who conduct fox
hunts looking for those awful CBEers. Double standards in action. What i
take issue with is the scare tatics used by people such as Bullon. My
operating habits will not change due to the bulling of this poor pathetic
Ham operator who has to much time on his hands.

The switching power supplies generate a lot of hash on the RX end, so for the skip talkers it really isn't a good idea.

On the shootout side, we usually use a 3 phase transformer being driven directly by the alternator, and from their into the diode stack / caps.

That is simplicity at it's finest, the entire thing is controlled by the alternators then... Rev the engine up, the watts go up. Idle the engine, and you do low watts.

Has been thought about, just not done. Some of the people building boxes I doubt would have the expertise to build a good switcher anyway... Copycat clones.

Who gives a shit? We have more operators in the CB radio service than you do active amateur operators, and we cram all of us (even the illegals) into 2 megs of space. So, who is wasting spectrum? Why do you think that UPS now owns half of one of your "precious bands"... 2 down, FCC only has a number to sell off... Don't throw stones when your own house is made of glass.

>
> Don't you wish you had that many frequencies to operate on?

I do. I choose to not operate on them because of arrogant asses such as yourself.

> The two meter ham band alone is over eight times larger then the entire CB band.

And what is your point? The 220 band was also, and it was cut in half because people didn't use it.

Welcome to the real world.... The bankroll rules.

> Its not that hard - get a ham license. But that would mean that you
>would have to obey the rules - something that I just don't think you are
> capable of doing.

A. I have one
B. The original poster has one (both she and her hubby are friends of mine)
C. Why? We seem to have all the fun we need where we are. Why do you feel the need to force people off of CB (when you yourself said that you have that band, too) and onto ham radio? Is it because you feel that without the numbers (of active operators) you feel that you will lose more spectrum to the UPS's of the world?

>
>
> > 2. they spend way to much time worrying about 11 meters.

I think you better get that calculator out and do the math.

27 megs is most definately part of the 11 meter band.

Of course, a good amateur operator would know what frequencies encompassed each band, and also know that their is a difference of each bands electrical counterpart, and the "INTERNATIONAL DESIGNATORS OF SHORTWAVE BANDS".

But, then again, all you did was memorize Gordon West's tapes, went down and passed the written and think you are an "elite" radio operator that is a cut above anyone who chooses not to take a test and still partake in a hobby that involves your precious radio, huh?

Stop whining. It is getting old.

No it isn't.

Everytime you double the number of radiators, you effectively double the number of watts.

Let's put this into perspective.

1 antenna = 10dB gain
2 antenna = 13dB gain
4 antenna = 16dB gain

Since every 3 dB gain = double the power, and 10dB is 10X the power with 1 watt in, it works out like this

1 antenna = 10 watts
2 antenna = 20 watts
4 antenna = 40 watts

OK,
I am about to install (finally) an antenna for my base station on a tree near my house. The only thing is that I do not want to have to keep climbing up the tree to adjust the SWR and would like to know of a good way to do it on the ground. Anyone know how to do this? Just hook it up and test or is there some other way that involves me not being close to the antenna? Also, about grounding, whenever I try to calibrate my SWR meter (a Dosy, but hey it was free!) it jumps all around on the scale. Could this be do to some ground fault? I made this test with the antenna placed against the tree and can't really see why it would do this. Thanks it advance!!!!

The issue here *is* over illegal operation on 11 meters. It's the people who are DOING the illegal operation on 11 meters who keep bringing up the ham bands and saying basically that they operate illegally on 11 meters because they are too childish to operate legally on 11 meters or on any other band.

>The 11-meter band definately has its place in society. It has been
>hugely succesful. It is fine being AM and should be left the way it
>is, except maybe add more channels. Most people don't want to take
>the time and expense to get a ham license just to talk to a bunch of
>anal retentive radio geeks on 2 meters. I have no problem with doing

Ahem...excuse me, didn't you just say the issue here was supposed to be illegal operation on 11 meters? What does your opinion of the people who operate on 2 meters, or anywhere else for that matter, have to do with illegal operation on 11 meters?

>this and talking to people on 2-meters but the greater majority of
>people will not. And if they did, then 2 meters would be just as
>unusable as channel 6 is on 11-meters.

Well, the point of the post you were replying to when you made these comments was precisely that the 2 meter band would NOT be just as unusable as the Toilet Bowl on CB because (1) the 2 meter band is a full 4 Mhz wide, not just a few hundred KHz, and also because (2) the people who operate on 2 meters have a LICENSE and would LOSE that license if they acted on 2 meters the way the jerks on the Toilet Bowl do...and since those people on 2 meters had to EARN those licenses by passing FCC examinations, most (not all, but the vast majority) of the people who have ham tickets value their licenses too much to risk losing those licenses by acting like a Toilet Bowl Commando on 2 meters or anywhere else.

>The 11-meter band fits a certain nitch perfectly. The problem is that
>people are using it outside its design parameters and this is causing
>problems for normal operation. This is a problem with which we should
>be searching for solutions and not bickering about why the 11-meter

>band stinks compared to other ham bands. The two are disjoint.

We already have the solution...round up the knotheads who can't
operate according to Part 95 and lock them in cages so they will be in
no position to do any further harm to this portion of the RF spectrum.
These idiots ARE the reason the 11 meter band stinks. Get rid of them,
and the band would be just as enjoyable as 2 meters.

I've never even read a ham radio license study guide. Perhaps you
missed it when I posted the story of how I happened to wind up with a
ham ticket.

You see, I'm not a ham who happens to be interested in other facets of
the radio hobby. I'm an SWL who happens to have a ham ticket.

I went to a hamfest this past September to look for an HF receiver to
use as a backup to the one I have been using for the past two years or
so. While we were there, they were giving the exams and taking
walk-ins. One of the guys I went there with, who has a General class
ham ticket, joked with me that if I had studied for a month or so
before the hamfest, I could walk in there and get a ham ticket.

I replied to him that I could probably pass the written test for a
Novice class license without studying, just on the knowledge I have
gained from 33 years as an SWL. He laughed. So I made a bet with him.
I told him I'd go in and take the test, if I passed it, he paid the
$6.30 or whatever, if I flunked, I paid for it...and the loser also
had to buy lunch.

We shook on it...I went in, took the Element 2 written test, and
passed, as I expected I would. The VE asked if I wanted to take
Element 3a. I had nothing to lose at that point, since my buddy was
now paying for the test (and lunch) anyway, so I said, yeah, sure,
I'll take the Element 3A test.

Much to my surprise, I passed Element 3A also, thus qualifying for a
Technician class ham ticket, which was issued by FCC six days later.

So, you could say I got a ham ticket without studying for a single
minute...OR you could say I studied for 33 years as an SWL. Either
way, I've never seen the inside of a study guide. I learned what I
know about radio from 33 years as an SWL, 24 years as a CB operator,
and 22 years as a scanner monitor.

The exams are not that difficult...at least not the ones for the
entry-level Novice and Technician licenses. I'm told the ones for
General, Advanced, and Extra are more difficult. I'll find out about
that when I get my code speed up high enough to test for a license
upgrade. But the tests for Elements 2 and 3a are not as difficult as
some people would have you believe.

73 and good DX'ing,

One reason 10 and 11 are so popular is because of the chance for types
of enhanced propogation not dependent on the sunspot cycle.Sometimes
when the cycle is at the bottom 10/11 are the best bands if only for a
few hours at a time.

Down here on the west coast of Florida the airwaves are trashed during the day. I have to turn the RF gain down 3/4s of the way or else the static has my signal meter pegged. I've noticed that I cant get out as far s I used to either. I've tried different radios and antennas and they all seem to be the same way. It doesn't do it at night so I'm wondering if it could be something todo with the atmosphere??? anyone who knows whats going on I want to hear from.

Thanks
tom

Perhaps the FCC will investigate you if enough people complain of you illegal jamming activites just enough to cause a No- Code Tech some grief. is this is your vendetta against the CBers who ran you off the band. Why not go study the code test seems that you have much time on your hands. BTW, I feel we should also forward all your post from the newsgroup showing how your harrasement, and copyright infringent shall also be looked at. The FCC doesnt take anything too serious that a Tech class licensee has to say especially after all the posts get forwarded to Mr.Riley showing your assinine behaviour on the newsgroup. It will show your antagonistic nature towards us lowely cbers.

Frizz,
I talk alot on Channel 15 but I noticed my SWRs were a bit higher when I go above channel 40 or if I go very far below channel one so I recently purchased an MFJ-949e Deluxe Versa Tuner for $150 and I use it to bring my SWRs down to 1.1:1 everywhere I go.
Not only does it seem to help keep my RCi 2970 a bit cooler but it has dramatically affected my output to some of my regular contacts on some of those other frequencies.
The MFJ 949e is usually available from any good CB shop and I feel they are very much worht the extra money.
THe MFJ 949e installs in-line on your coax by way of a coax jumper from your transmitter and is not only very easy to install but also very easy to operate.
The Smokin' Armadillo

>
>>>a round into your scrotum
>
>whether you have one or not!!

I didn't say *I* wanted to do that, I merely presented a hypothetical
situation involving unspecified person or persons with an admittedly
perverse idea of amusement. My intent was to make the point that your
right to enjoy your chosen form of amusement ends when you infringe on
the rights of others...which is exactly what you do when you render a
frequency totally useless with your illegal equipment and
inconsiderate operating practices.

It seems the point was lost due to the fact that I was unaware of your
gender; however, if you substitute the word "breasts" for the words
"scrotum" and "testicles" in my original statements, then the
statements I made will apply in the case of a YL just as the original
wording remains valid for an OM.

>And what does old Johny boy really know of the David Koresh and the Freeman
>brothers etc.....

You'd probably be very surprised what I know about such issues. I do
not live in a vacuum. However, since my knowledge of those issues
really has nothing to do with radio, I will simply say that it's too
bad you weren't around when we were debating Waco and Ruby Ridge in
the CIVLIB and RTKBA echoes on FidoNet several years ago, or you might
understand why the feds were very hesitant to use force against the
Montana Freemen.

>You think that blowing a whole in someones anal cavity is fun and enjoyable?

Once again, I did not say that *I* was interested in shooting at you
or anyone else. However, you can't blow a hole in a hole...you can
only blow a hole in the material surrounding the hole, thus creating
either a bigger hole, or a new one next to the existing one. :-)

This would, however, be contrary to generally accepted defensive firearms practices. No defensive firearms instructor that *I* have EVER had the pleasure of learning ANYTHING from has EVER advocated aiming anywhere other than at an adversary's head or the center of the chest, since these are the locations most likely to produce an immediate stop of the adversary. Shooting at an adversary's posterior would be a waste of precious time and valuable ammunition.

All of which, again, has nothing to do with radio. If you wish, we can continue this discussion in another NG where it would be on topic. :-)

>>Oh if he only had a clue!!!
>
>Yeah, you're right, I had no idea you were a YL.

YL???
more CW talk comming from a no code tech. do you use q codes on the repeater too? i bet everytime you drive in your car your destinated some where too.

Dwight do you really consider yourself a ham, For starters you are a no-coder I personaly don't consider you to be a real ham, Secondly You were issued a license on Aug 3, 1999 How can people think you represent the ham community, you havent even gotten your feet wet , any moron can pass the no-code test it takes a little more apptitude to pass the rest of them perhaps when you are a General, Advanced or an extra we will take you serious. Other than that go cry to someone else who cares

431 It is impossible to talk to someone if propagation is not favorable, I don't care how many watts you may think you have. If you speak to Mean Pill then the band is not dead . So what you are saying is you can just key up your radio and talk to Mr.Gunn when ever you like I dont think so.

Cary: Your microphone cord or plug or even the switch in the microphone may actually be causing the trouble, not the relay itself. Any high resistance connection due to oxidation or ageing may contribute to the trouble you describe. Try a clip lead on the ptt connection at the connector to chassis....as always, exercise caution in the old tube rigs as high voltage is present.

Good Luck
Dave http://www.retrocom.com

let's stop talking about the idiosyncracies of channel 6 and get down to it.
now, does this wonderful channel 6 , known affectionately by some as the
superbowl, and others as the toilet bowl, does it need , i say , i say ,
does it need a flushing. i think so. now is it possible for a human to
purchase one of these duzzies produced by henry? i want one of those 25000
watt, 3cx15000 units. How much are they? Christmas is coming up. Anybody
got a grubstake for ole icm? ,.....icm out .....

If we ignore these morons posts they will go away, They are no Code Techs wanting to prove thier worth to the ham communityThe FCC has more to worry about such as child porn, frauduelent web site, cellular problems, cable companies, Ham bands Why would they worry about 11 meters when there licensed hams have screwed up there own bands with profanity, excess power, jamming, pirate radio stations, this is all from a group of people who hold FCC license and are supposed to know the rules. The CB band also has its share of hams that come to 11 meters and play there games. Your saying this doesnt happen. I beg to differ i have seen firsthand many hams running excess power, profanity, and there dropping down to the cb band. I have also been licensed for 21 years in the amatuer service. Just as on the radio if you ignore the carrier throwers etc they will get tired of the one way conversations , if we continue to talk and reply to them it feeds thier fire. Let them ramble on without a reply they will go away

AM 40 channel, based on a version of the EPT-360014B board.

http://www.bills2way.com/equip/nr_100.html

- Single Final installed, room for a second one.
- Like wireless communications Northstar radio's it has a few changes.
- The Front end is based on a different part.
- The board has been made smaller to fit the smaller Cobra 29LTD foot print.
This was done by using surface mount parts in many areas, but not everywhere.
- The Curcuit mods for modulation that we all know for the DX-33 thru DX-99V
will still work. No design change here.
- A surface mount transmitter mixer was used, I have no idea why, does not save any space.
- TWO New boards installed on chassis side. One is a Compander, and as far as I can tell
it is the same thing as the Soundtracker noise system. Is in line in both Xmit and receive
modes. This is using a "KA8507" IC...?? Anyone have info on this? The other is the
front panel lighting system. Although not the same as the Cobra NightWatch it is
close. Not sure whitch one I like better. The NightRiders are a soft blue.
- OK, Now for the bad news. THE PLL. it is a small epoxy potted system. It appears
to use surface mounted devices, and you can not get to them very easy.
- Modification looks like a crystal switch special to get the extra channels.
Like those used in the Expo-100 kits.

AM/SSB 40 channel, FULL Sized, based on a version of the EPT-360014B board.

http://www.bills2way.com/equip/nr_150.html

- Single Final installed, room for a second one.
- Like wireless communications Northstar radio's it has a few changes.
- The Front end is based on a different part.
- The board is full sized, very little surface mount.
- The Curcuit mods for modulation that we all know for the DX-33 thru DX-99V
will still work. No design change here.
- A surface mount transmitter mixer was used, I have no idea why, does not save any space.
This was also seen in the late run of the Northstar 9000 mobile units.
- TWO New boards installed on chassis side. Same as the above AM chassis.
- PLL and channel selector is again like the above radio.

My SWL activities consist of shortwave utility station monitoring,
especially military stations, and listening to the HF ham bands. Very
seldom do I bother with the SW broadcasters - to me they are nothing
more than QRM.

By the way, Q signals and terms such as 73, OM, YL, etc. are routinely
used by SWLs and widely understood by us. They are not limited to CW
by any means.

73 and good DX'ing,

I wish people would use real names.

I have just got back into the hobby, long commute, and I have the following
in my Jeep.

Uniden PC68XL ($114) and the K40 ($70). Having excellent results with both.
Almost
DFQ quality on transmit and receive. I like the quick twist disconnect on
the mag mount.

Hello Frizz: Install the A99 on a length (21 feet, or so) of 1 or 1 1/4 inch pipe. And you can easly raise and lower the A99 to adjust the SWR rings. It should be close enough to be good to go. Make sure the coax comes down the pipe straight, it part of the antenna for about 9 feet or so.

Then I would use this pipe as a mounting mast for the A99 in the tree. Big-Ten-4

Jay in the Mojave.

Yeah your HI alright,... John,

Just remember this....WHAT GOES AROUND COMES AROUND!
I hope I am around when you and Rick Bullon <KC5AJX@unicomp.net> get yours.

Have you ever been to a race track and watched cars/dragsters go 300 plus miles per hour in the 1/4 mile?
If not then we understand your ignorance. It seems like you need some education in having a bit of fun in good clean competition. Go get your head out of the hole you have put yourself in and come out to the real world. Loosen up and for once in your life smile at something. It might just change your attitude.
You need a major attitude adjustment.
Get off our high horse and start living like a normal person.

We are not afraid of you or your crony's, so take yourself and your Rick Bullon <KC5AJX@unicomp.net> and go play in your own sandboxes with your own toys.
It's a sad day when you try to take someones amusement away. God will get you for it!

The good will prevail!!!!

3812. Cobra Cam 88 help please...

Newsgroup: rec.radio.cb
Date: 1999-10-31 00:00:00 UTC
From: Skyrider Defiant <cfries@tic.bisman.com>
Message-ID: <ZK%S3.2064$UG4.15904@newsfeed.slurp.net>
Source record: 8261

Hi there:

I have a 1965 Cobra Cam 88. Recently, when I key down the mic. The transmit/receive relay just pulls down about half way, causing the rig to oscillate between transmit and receive. If I manually push the relay all the way down, it goes into transmit fine. I've cleaned the relay to no avail. Does anyone have any insight into this problem? It doesn't look like I'd ever be able to find another relay for replacement, short of a parts rig, so I hope it's something else.
Your thoughts would be appreciated.

Regards,

Cary Fries

no. in no other words than what he wrote. some just dont want to be ham radio nerds. its that simple. i can copy around 12 words a minute in my head but you wont see me trying to get a liscence. i have 112 countries confirmed direct(without qsl managers and beuros and all those are last cycle with 25 watts and a antron99) right here on 11 meters and have friends over seas that i regularly speak with. theres no reason i can possibly see to become a ham. if i did i may get struck with the awfull disease that makes hams think there better than others. the FCC is not god. its a agency created by our government, nothing more, nothing less. do you go around telling people that litter to watch out or youll take there picture and mail it to the EPA? your little crusade here on this news group is a joke. it will do nothing but cause you to watse your time. for all you know riley hollingsworth could actually be TOLL FREE.

I'm not sure the modulation limiter has anything to do with it
interfering with the neighbor's computer speakers. The only way to
find out for sure would be to reinstall the modulation limiter and see
if the problem went away.

Since you're not using that anyway...thank you for operating legally.

>computer speakers, oh yeah and my antenna is a little higher than rules
>allow 61' to the top.

Actually, I think it's 60' above ground when mounted on a tower, or
20' above a man-made structure such as a building. If you're on top of
an 80' building, you can't very well keep your antenna at 60' above
ground, so in that case you're allowed 20' above the building. For an
80' building that would be 100' above ground, but still legal. Thus, I
don't think anyone's going to quibble much about one foot.

The wife and I went for a little drive this morning and stopped at the Flying J truck stop whch is located a few exits down I-10 from our house. After getting a nice slice of pizza we strolled around the store and discovered that all of the Galaxy, Cherokee and Ranger 10 meter radios were no longer being sold there. The only radio products they were Cobra and Uniden. The manager of the store said that didn't know why these products were suddenly removed from inventory last month but these decisions are made at company headquarters. Is this a sign of things to come?

I ended up buying a Uniden Grant XL. Im very happy with it. Its loud on the TX and the RX has a good noise filter. The SSB performance is more than satisfactory. The 148GTL by cobra is the same radio, but costs more, so I went with the Grant.

Good luck.

>capable of doing.

Why do you people constantly argue back and forth about the virtues of
one band over another?

The issue here should be over the illegal use of 11-meters. Not about
why a certain licensed band is better than an unlicensed one.

The 11-meter band definately has its place in society. It has been
hugely succesful. It is fine being AM and should be left the way it
is, except maybe add more channels. Most people don't want to take
the time and expense to get a ham license just to talk to a bunch of
anal retentive radio geeks on 2 meters. I have no problem with doing
this and talking to people on 2-meters but the greater majority of
people will not. And if they did, then 2 meters would be just as
unusable as channel 6 is on 11-meters.

The 11-meter band fits a certain nitch perfectly. The problem is that
people are using it outside its design parameters and this is causing
problems for normal operation. This is a problem with which we should
be searching for solutions and not bickering about why the 11-meter
band stinks compared to other ham bands. The two are disjoint.

If its an Antron-99 its supposed to be factory tuned to the middle of
the 11-meter band so you shouldn't need to tune it at all.

An antenna being mounted that close to a tree may well require some
tuning nevertheless. Also, if the antenna is less than 1/4 wavelength
above the ground, you will have a high SWR reading.

One should also check SWR any time an antenna is installed to make
sure there is no open or shorted connection in the feedline (which on
CB is almost always a coaxial cable), since if there is a feedline
problem, all the tuning of the antenna in the world won't help any.

Geez, do I have to explain *everything* to you people in here?

Since you have the unmitigated audacity to threaten *me* with the law
when *you* have a web site that blatantly advocates illegal activities
and blatantly traffics in illegal radio equipment, it would serve you
right if I simply blew you off by calling you a petulant ass,
presumptuous hypocrite, and a few other terms that come to mind, and
then let you contribute to your own humiliation by going to visit an
attorney - who would undoubtedly laugh you right out of his or her
office, then bill you for the time you wasted.

Instead, just this once, I'm going to be a nice guy about it and take
the time to explain this to you. I am not, however, going to make a
habit of this, so next time, I suggest that you consider finding out
something about whatever it is you are shooting your mouth off about
BEFORE you go shooting off your mouth (gee, why do I find myself
having to say that to so many people in this NG?).

First of all, before an infringement suit may be filed in court,
registration with the U.S. Copyright Office is necessary for works of
U.S. origin. That requires that you file a copy of your work with the
Library Of Congress, AND a copyright registration with the U.S.
Copyright Office..

Got a Library of Congress Catalog Card Number for the content of your
web site?

Got a copyright registration number from the U.S. Copyright Office for
the content of your web site?

No, of course you don't.

Why not?

Because copyright, a form of intellectual property law, protects
original works of authorship such as literary, dramatic, musical, and
artistic works - that is, poetry, novels, movies, songs, computer
software and architecture. Copyright does not protect facts, ideas,
systems, or methods of operation.

You *could* copyright the HTML code you used to publish the pages on
your web site. HTML code is generally considered to be a computer

program and *can* be protected by copyright. The facts and ideas presented BY that HTML code are another story. Facts and ideas *cannot* be copyrighted.

If you *could* copyright facts and ideas, would it matter anyway?

No, it would not...because under the fair use doctrine of the U.S. copyright statute, it is permissible to use limited portions of a work, including quotes, for purposes such as commentary, criticism, news reporting, and scholarly reports.

Thus, even if you *could* copyright the facts and ideas on your web pages - which you cannot - my use of those facts and ideas would still be permissible *anyway* under fair use doctrine.

Furthermore, if you *could* sue for damages, your ability to sue would extend only to real damages suffered in loss of profit as a direct result of my use of your material. You could not sue for punitive damages because I did not profit financially from the use of that material at all. Since the only business activities that would be affected by my use of the material on your web site are illegal activities to begin with - i.e., trafficking in illegal radio equipment - the damages you would be entitled to recover would amount to exactly ZERO. NADA. NIL. ZIP. And you'd have to pay your own court costs besides...you couldn't even recover those. The cost of paying your attorney would come out of YOUR purse. The cost of filing court documents would come out of YOUR purse. And your suit would be dismissed as frivolous, even if you *could* find an attorney rotten enough to let you actually proceed with such a farce just so he could bill you later and laugh all the way to the bank...leaving you perhaps a little smarter, and definitely a lot poorer.

I'll also point out here that the drivel about only 10 people out of 10,000 being able to be heard on The Toilet Bowl was previously posted in this NG by someone else, and you posted no objection to that use of that material from your web site. I quoted what I quoted for the purpose of commentary and criticism in a letter that was indeed subsequently submitted to an agency of the United States government (i.e. the five appointed FCC Commissioners), a permissible use of that material under fair use doctrine. I then posted a copy of my letter to the FCC in this newsgroup, which is protected free speech under the First Amendment.

If you were stung by the commentary and criticism, that isn't my fault...I didn't tell you to go and utilize your web resources to advocate illegal activities. If you're going to do that, then you should not be surprised when it results in negative publicity. If you want positive publicity, then advocate LEGAL operation on the CB band like the American Eagle Radio Club does on its excellent web site, and I'll be more than happy to provide some positive publicity for you (just like I rather slickly just did for them). But as long as you sit on the wrong side of the fence and continue to support people who ruin

the CB band for those of us who operate legally and considerately, you'll find me to be a continual thorn in your foot, so to speak. The choice is yours to make.

dwigth why do you stay in the cb newsgroup now since you are an elite
No-Code tech Ham? if you ever get past the no ocode test you will see that
electronics is very much a part of the ham test. Try the advanced test oh
thats right you need to work on that code speed first. Arent you moving on
up the ladder of radio life .... Hit the streets running to
rec.radio.amatuer. Your ft 847 wouldnt smoke my Cobra 29 on 27.025

Well, let's take a look here...

>>73 and good DX'ing,
>>John D. Kasupski
>>KC2FNG, KNY2VS, KJK-14120, KSO-9650, AE279

First of all, we have my real name...which I notice that you and a lot
of other people in this NG don't have the guts to insert into the
messages that you post. Why is that? Are you ashamed of who you are?
Are you afraid that your friends might find out what you're really
like? Or do you just have so little respect for your own opinions that
you can't even bring yourself to associate your name with them?

Now, on to the callsigns issue.

Hmmm, we have one ham callsign (KC2FNG).

We have one monitor station registry identification number (KNY2VS).

We have two CB callsigns (KJK-14120, current, and KSO-9650, issued by
FCC in 1975).

And we have one set of CB sideband numbers (AE279).

I think I've given adequate coverage to CB in my signature lines.
Therefore, I must conclude that the only reason that you don't like to
see the ham call in their also is that you're jealous because you
don't have one too.

Next, I suppose, you'll be whining about the fact that I have my
monitor station registry ID number in my signature line, too...and I
doubt that you have one of those, either.

I don't like noise toys either but don't come on hear crying about them, I also despise roger beeps but have never posted anything about that. I don't like hams who say 73's it is not correct I don't like the 80 meter band because there are people using above legal limit power there and brag about it also, I have heard them "key" up on other operators trying to monopolize the band, maybe you would know these if you had the license to use them. Why does a ham need a 3cx3000a7 when the legal limit is 1500 watts PEP that power can be easily acheived with much less tube size. Other than the duty cycle.

Sounds like RF from the antenna or something else getting into the meter.
The antron should be fine if you follow the instructions that came with it for tip lenghth,leave the rings in the middle.This is a base antenna and much wider than most mobiles so stop worrying and start talking.

Thats BULL,a small CB beam with a real DBD of 6.5 or so could give a 12-20 Watt erp when stacked like you suggest and a better beam like a 4 element long boom with 9.5 DBD would give an erp between 64-70 watts,a long way from 100kw.this same setup driven with 100 watts would yield an erp of 640-700 watts.
What antenna were you thinking of?where and how did you figure this?What are you smoking? Do you know how much a good rotating tower costs?
Mike Lamb in Bozeman MT has a 200' tower with 4 6 element 10M mono-banders on it and uses 1,500 watts,it has been featured in magazines.
His erp IS over 100,000 watts!

This kinda makes me remember what was going on in '83 in my area. There was a "channel war" between high school kids & old people, wanting to use CH. 34. There was no profanity then, just mimmiking of other ethnic groups other than your own. It was VERY funny & I wish I taped some of the shenanigans! But then as now, no one had the SENSE to get OFF the freq. & GO to another one (both groups had PLENTY of channels they could of gone to). One night, all the young whipper snappers JAMMED the channel. It was UNreal. Those WERE the days !!!! Dave!!!!!

"Every CB is GOOD" is A LIE ! IF it is made in CHINA, it is JUNK !!! It is a cheapened up rip off, for what you can sell him instead---QUALITY CB's made in the Phillipines. IF it says Made in CHINA on the box or back of the radio, DO NOT buy it OR sell it. Maybe if we had more CB shops with Morals, we'd get OUR Country back !!!! IF you buy it, You'll be sorry !!!!!! Dave!!!!!

well it is interesting that it seems that all the ham radio types on here jumping up and down are as you say, no code techs. i mean where is the outrage among the extra class people , etc. believe me , there is none and they probably could care less what goes on in the free band area and 11 meters, ...icm out.......
Big Sexy wrote in message ...
If we ignore these morons posts they will go away, They are no Code Techs wanting to prove thier worth to the ham communityThe FCC has more to worry about such as child porn, frauduelent web site, cellular problems, cable companies, Ham bands Why would they worry about 11 meters when there licensed hams have screwed up there own bands with profanity, excess power, jamming, pirate radio stations, this is all from a group of people who hold FCC license and are supposed to know the rules. The CB band also has its share of hams that come to 11 meters and play there games. Your saying this doesnt happen. I beg to differ i have seen firsthand many hams running excess power, profanity, and there dropping down to the cb band. I have also been licensed for 21 years in the amatuer service. Just as on the radio if you ignore the carrier throwers etc they will get tired of the one way conversations , if we continue to talk and reply to them it feeds thier fire. Let them ramble on without a reply they will go away

3871. New to newsgroup & CB radio...

Newsgroup: rec.radio.cb
Date: 1999-10-31 00:00:00 UTC
From: Dan Oglesby <danno@vet.purdue.edu>
Message-ID: <381CDFD6.218C2AD7@vet.purdue.edu>
Source record: 8320

I just started reading this newsgroup today. I've used a CB radio before a couple times on trips with others, but never owned a CB radio until this weekend. I bought a pair of CB handhelds yesterday on a trip back from Detroit with another person who just bought a truck who was following me. So, now I own two 40 channel, 4 watt radios. :-) Too bad they run on AA batteries... :-/

Anyways, I think I want to become a regular user of CB radio, and I was wondering if anyone had any tips or suggestions for me. Right now, all I have is the two handheld radios (which seem to perform pretty decently), but I'm thinking of installing a decent CB unit in my car and possibly getting a base unit. If anyone knows of a good place on the internet for CB supplies, let me know!

Danno

actually it was God Fathers CB and Electronics he closed down about a
year or more ago and took all the shit with him he still got my radio...
Sammy was the tech and god father(the owner) moved to fla. about a year
and a 1/2 ago I heard he got busted for playing with the girls (or so I
heard) any way Sammy did do good work but there gone now, went the way
of many cb shops.

And hopefully it won't stop there. All amateur radio equipment capable of operating on CBRS frequencies should be removed immediately from all store shelves. Why take a chance that a Kenwood, Icom or Yaesu may fall into the wrong hands? I'm with you 100%...the FCC should not be allowing the sale of any non-type-accepted radio equipment. The public can only be trusted with type-accepted CBRS and FRS radios. Amateur radios should be required to pass type acceptance as well so that there can be no chance that they might accidentally operate on the Citizens Band. No one should ever be allowed to make changes to their equipment since that would void the type acceptance, making use of the radio illegal. The FCC has made it clear that our airwaves are not to be used frivolously...there needs to much more government intervention to ensure that all radio operators have absolutely no fun.

Ask Gunn about the times we have done some fat mouthing at 2:00am with NO conditions.
Have you ever checked the various bands for DX to find it dead as a door nail except for the bowl. Talking out of conditions is also done by many of the superstars. After i got back from Hot Springs last year Gunn and i were bumping down. After about fifteen minutes the Buck Eye came in. Loud as hell were these brothers. Gunn let them come in real solid then dropped the maul. Now Gunn had NO conditions. It was raw power. As i said you can manipulate the conditions.

Sure don't, but I have one, too. It is sort of a gold brown color. It
is definetly non amplified, and looks like a turner. I have an old
Realistic powered desk mike that is a black plastic that looks
identical. Jon.

CB's are great fun. One rule of thumb I always try to get through to new people is that you should never believe everything you hear on a CB radio and don't pay attention to the lame idiots out there. There are a lot of them...
Have fun!!

well i was going to say that power is power and raw power will get you far , conditions or no conditions, speaking of the ionosphere is concerned. now if you got a big strappin radio setup and the channel is clear, heck, there is no tellin how far you can talk. even with a little power and no conditions and a clear channel, a lot of times talking a hundred miles would not be unheard of. oh the signal would be faint but it would be there and you could hear it and understand it, but with a lot of power , well , the possbilities would be endless,.....

hey what is wrong with owning a kenwood, icom or yaesu radio,.......icm
out.........
cbrs@webtv.net wrote in message
<20727-381CDD9E-64@storefull-122.bryant.webtv.net>...
And hopefully it won't stop there. All amateur radio equipment capable
of operating on CBRS frequencies should be removed immediately from all
store shelves. Why take a chance that a Kenwood, Icom or Yaesu may fall
into the wrong hands? I'm with you 100%...the FCC should not be allowing
the sale of any non-type-accepted radio equipment. The public can only
be trusted with type-accepted CBRS and FRS radios. Amateur radios should
be required to pass type acceptance as well so that there can be no
chance that they might accidentally operate on the Citizens Band. No one
should ever be allowed to make changes to their equipment since that
would void the type acceptance, making use of the radio illegal. The FCC
has made it clear that our airwaves are not to be used
frivolously...there needs to much more government intervention to ensure
that all radio operators have absolutely no fun.

Pls check an d confirm this

- while pressing NB/ANL and PROGRAM and DIMMER, press POWER

- continue pressing all four buttons until the radio
turns off

- release only the power button; the radio will
turn on again

- release NB/ANL and PROGRAM and DIMMER; funny display

- press _in sequence_[?] (UP), (DOWN), DW, and M1.
[not sure of this step]; the radio will turn off [?]

- to turn on, press POWER, then press DW

Does this mean you turn it on with POWER+DW only once the
next time you turn it on or does it wake up 28MHz ssb every
time an d you always have to press DW?

Thanks

Not into my receiver, the Big Horn had the NY/NJ/Pa area locked down. Who
did you say you were anyhow?

ray, If you were able to talk it was because you had some type of conditions plain and simple, not sure where your located either, Now that doesnt mean they have to be the best of conditions where it is a solid 20-30 db in your duck pluckin receive, You nor anyone out here can dictate when mother nature is in your favor, if that is the case I want you to get on there right now and talk to everyone in all 50 states, you did say you can manipulate conditions. Most of our longe range communications come from the F-Layer in the ionsphere this you cannot manipulate, certain times of the day and night your signal gets absorbed by the ionsphere and the different layers and your signal never makes it back down to Earth again lending to "No Conditions" no matter how many watts you have on 11meters

The "American Eagle Single Side-Band CB'er's Club" (A.E.) is simply a group of sidebanders who enjoy the hobby of radio. We are NOT "FREEBANDERS, AGITATORS, or anything else. We generally operate on 27.385 or 27.395 LSB. Before you decide to chastise the "club", please feel free to check it out yourself. And maybe even join! They're at http://members.tripod.com/~eagle217/americaneagle.html Also, the monthly publication "Sporadic Waves" is simply a publication geared to sideband radio operators. Get a copy and see for yourself!

Man you are realy something, Explain to the group how an Antron's match would be affected by being close to the earth. You can take a 3 element beam and stand it on end, aiming up into the sky and tune the match and get real close by doing this, so once again you are the only one impressed, You know you can have a amateur lisense and still be a mudduck, and you sir have proved this point.

John your so smart,
Try to rip CBer's apart,
Open your mouth you fart,
And its picking your brain!

I told you back when,
That if you do this again,
I'll get under your skin,
Now lower your arm, give me a vein!

Pull down your nose.
And you won't get the DOSE!

Hi everyone,

I need some experience here... My wife and I are going to be making a long move soon in two cars and need to stay in touch. So I went to Wal Mart and bought a set of 2 uniden CB's thinking they'd do the trick. I don't need anything fancy after all. Well, I put in the batteries, hooked up the little rubber antennas and got exactly 100 feet away from my wifes car before we started breaking up. I know the stuff I bought is crap and is going back to the store tomorrow, or maybe getting a bigger antenna, but I also don't want to spend a fortune on this one long trip. Can anyone advise me on a Cheap but functional radio, that will give me at least 1 mile of good clarity from one vehicle to another? I appreciate any help in advance. Thanx!

~Pete~

PS: I'm trying to stay under $150 total (two radios).

> >white trash would know how to FTP to his own ISPs machine!
> >
> now that is pushing it a little to for

For what? What have I pushed a little to for?

Wait.. You probably meant "FAR". Forgot, I have to put my idiot translator
on.

> you are starting to spit out racial insults

Racial? I think not. I am white, and I think that you seem to fit the
stereotype of living in a hovel, having at least one non-running vehicle out
front, maybe another out back, might just have it up on cinder-blocks.

Racial, no.... Stating opinion, yes.

> i do not care for such stuff hear if you are that obsessed with cb

This is another one of your sentences that makes no sense. Please...
Hooked on Phonics.

> i should just let you be

Your right. I have a hard time deciphering what you are saying, and it is
hard for me to battle someone that makes no sense.

> because you are evidently not on stable ground

Hoo hoo... That is funny.

> just ask if this is worth freaking out about

To which "this" are you referring to? Yet another sentence that makes no
sense.

>
> and personally the way you act actually has me thinking
> you are not someone to be bother because you
> get way to emotional over things

I think I see what you are trying to say, but not clearly as far as what you have written. Idiot-in-a-box to English translator recited:

I think that you are not someone to bother with because you get way too emotional over things....

Yeah, right. Please don't attempt to flatter yourself by thinking that I get emotional over you.

Definately not.

>
> like my brother in law you get him mad
> he starts punching the walls so i have found
> it is easier to let him be

This would just substantiate what was said under the explanation of my calling you "white trash".

> so much for brother in laws

And so much for thinking that people who have a call sign also have a higher standard of learning and / or an education.

You have a lot to learn about copyright law turtlehead.....We'll leave
it at that unless you want to go whinning to your lawyer to explain it to
you in oversimplified terms so that even slimebag bottomfeeders like you
could understand it.

You only make 22.50 an hour and live in New York?

Poor, poor man. That must suck to be at the low end of the totem pole.

Because of ease of modifiability.

That is the same reason that they have not brought another to replace it.

Funny...

I have held an amateur call longer than you, and you still post BS like
this.

I think that you better learn how the rest of the hobby works before you
continue to spew, as you have not been involved in amateur radio long enough
(judging by the length you have held your ENTRY level ticket) to even have a
modicum of a clue as to what really goes on.

When you are ready to step up, we are waiting.

Howdy!

I dunno about amps for radios as I'm learning all about this stuff, but have spent alot of time [and money] in dealing with high-end audio amps. As such, it should be pretty easy to tell the clean ones from the dirty ones by simply studying the specs carefully.

Now, when you found comparable audio amps, us audio guys would give them all a "test listen," and let the subjective differences [and our wallets] guide the decision. In this case, if you find some comparable units, I'd buy on price as "radio" in general is not high-end audio.

.....just my 2 Lincolns......

Best Regards,
Jay

They are the same, sans the echo and other "toys".

The Ranger has a digital VFO on it to compensate.

Huh... I just bought the same pair of handhelds as you did yesterday, and me and a friend following me used them for over seven hours on the interstate, in town, and on open country roads with little or no problems, as long as he was within 1/4 mile. The Uniden Pro340XL, right? These things EAT batteries, so I'd suggest buying nothing less than a very high quality alkaline battery (Duracell Ultra would work great). Once the batteries start to go, the operating range goes downhill quickly. Even after five hours of use on the batteries, we were still able to chat to each other within '100 feet, inside of our vehicles.

You probably need a CB antenna located outside of the vehicle for what you want to do. You might be able to use your handhelds with an external antenna if you can get one with the right connector (BNC). Otherwise, you should be able to buy some cheap CB radios from Wal-Mart or Radio Shack with external antennas for under $150, easily.

Toll, I am wondering what old johhny Boy is doing to clean up the ham bands since as you know hams police themselves and john is the RF police, and an entry level ham. maybe this is how he is making his bones, I think someone told him If he cleans up 11 meters they will let him pass the 5 wpm code test at the next big hamfest in the niagra falls area.

If you had the chance to run a 1/4 wave or a 1/2 wave on your mobile which would it be? a 1/4 wave antenna mounted on top of a vehicle will beat its smaller counterpart every time. Who cares by how much a 7' ft antenna is not much differance compared to a 9 ft antenna(1/4 wave) lets here how scientific your test was conducted.

The difference with the 80 meter band and cb is they are supposed to be radios elite operators, who are licensed by the FCC the Extras,the advanced and the Generals. Cb operators and hams are no different other than a license
With a cb a few hundred bucks maximum for a radio is all thats needed why spend the thousands of dollars to hear and try to talk to the elite hams on this band. At least on Cb i expect this we are lowlife scumbags that are on welfare, poor upbringing and If we werent talking on a cb perhaps we would be robbing banks selling crack cocaine or otherwise doing something far more worse than running excess power or having some fun with the local channel. I would be more worried about the child molestors in AOL's chat rooms than a person on the cb tlking on 27.555 Some people need to get there priorityS in order.

Radio Dude ,

I would watch Ebay.com, and your local swap meets. You would be surprise at what might show up. I hope you filled out a police report too. Don't forget to claim that on your taxes as a unrecoverable loss also.

Its hard to believe but it seems to be the world we live in. I would invest in a good security system or a real big dog. One that will eat anyone. At least then you would know who it was.

Good luck,
Ken W.

3916. Re: Riley's Influence?

Newsgroup: rec.radio.cb
Date: 1999-10-31 00:00:00 UTC
From: cbrs@webtv.net
Message-ID: <28213-381D02DA-97@storefull-126.bryant.webtv.net>
Source record: 8365

There's nothing wrong with owning a Kenwood, Yaesu or Icom, just as there is also nothing wrong with owning a Galaxy, Cherokee or Ranger radio. Hopefully these radios were pulled because they were poor sellers and not because of threats from over-zealous and mis-informed rule enforcers. I have heard the same stories as everyone else of radio shops being visited by FCC agents who have tried to confiscate equipment which did not violate any regulations. It would seem that the manufacturers of the radios in question should be informed if their products don't meet FCC standards. Harassing retailers doesn't seem like the right approach.

Kinda like the web page she keeps going, for all you know it to is
"hypothetical"

3918. FS: Cobra 75 WX ST -- Almost Brand New!

Newsgroup: rec.radio.cb
Date: 1999-10-31 00:00:00 UTC
From: Jay Chlebowski <DieselJay@ford-diesel.com>
Message-ID: <B4426B9A.1EF5%DieselJay@ford-diesel.com>
Source record: 8367

Howdy:

I've got a basically brand new Cobra 75 WX ST that I installed about a week ago that I need to sell. Quite simply, it doesn't fit my application all too well...

First, know that this is an all in one unit with a very small "brain" that's about 1in x 3in that you can hide anywhere. It's well suited to almost any vehicle. Here's a picture:

http://www.bills2way.com/equip/images/c_75wxst.jpg

I really have only two gripes with this unit:

1. I drive a diesel truck and the small speaker in the handset is not loud enough for me to hear over the roar of the engine at highway speeds. If I open the window, forget it. Moral of the story, don't run a diesel with this little guy -- if you've got a gasser you're fine. I _would_ add an external speaker & forego the loss on investment, but just don't like the looks of 'em, nor do I really have a decent mounting spot -- I basically need something with a front-firing speaker that aims at me.

2. I have small hands and can't seem to get my hand around the unit well enough to adjust volume on the one side and hit the PTT button on the other. Anybody with normal size hands will be fine with this, but I don't like shifting my hand on the handset all the time. Call it a pet peeve.....

Some will recall my static and noise complaint the other day. With the help of a local CB shop we traced that to ground noise and a poor squelch setting, so I can't in any way fault this Cobra unit. In fact, if it weren't for the above factors, I'd keep it as it fits the "installation" of the other gear I have in my truck to a "tee." Oh well...

I paid $89.99 [List Price of $119] from Bills 2 Way, plus shipping [talk abo; a wierd shipping charge calculation BTW]. I have everything for this unit, all documentation, wiring & mounting hardware, except for a few screws I lost for the Mic mounting bracket -- I used some screws from my "coffee can," and I'm sure you can do the same.

I'm looking for $70.00 [money order] plus freight, and it's yours -- not bad for what's essentially a barely used CB.

You can respond here, but I will get back to you quicker if you contact me via email.

Best Regards,
Jay

Hi To All,

I was wondering what is a good small amp for a car, Nothing powerful just 50-100 W.

I travel in areas of a sparse nature. And although I can here people out in the background, no matter how load I shout at my power mike . They don't here me. So I figured it might ba a good idea to ask some of the experts out there. Now I have a small car so I don't want something that sticks out. And nothing that I would need a second alternator for. Just bit of a boost.

Thanks

Ken.

snip

I believe that's what he said. Read below.

Snip
>>>was above all
>>>others on RX except a 1/2" x 107" copper pipe.
Snip

Isn't the above a full length 1/4 wave?

A stainless steel 1/4 wave is not as effective as a theoretical
1/4 wave. That is why it can be beat. Stainless steel only has
3% of the conductivity of copper. A stainless whip is much smaller
in diameter than most of the shortened 1/4 waves that marginally
beat it. Most of these shortened hefty 1/4 waves do not fold back
with wind speed. The 1/4 wave stainless does. At 45 degrees it
has only 70% of its vertical field strength.

I still would like you to explain how she does this? And how does a key down do this any more than your field day would?
Do you not think your neighbor gets sick of looking at your SW antennas and longwires, he probably gets pretty upset with the fact the you are a gun nut who makes comments to females a bout shooting them in the scrotum.
You might feel like a goody two shoes and maybe even look the such, but it very obvious that what you do is very annoying, and not very manly either, I picture you as the type of person who has probably hit a female or thought about it numerous times, also are you licensed to carry a handgun (if you do) and if so have you ever broke the law in doing any of this firearm stuff you are so fond of?
Firearms pose more of a threat than a CB amplifier could ever come close to causing, and you are probably one of those dudes that bitch because the government is trying to limit the rights of gun owners and gun buyers< I bet if you really ask yourself if you agree with all of the gun laws there would be a few that you wish they would change so that what you do would not be illegal, you sir are a nitwit, and if you are a grown man would you please try to act like one, I still cannot get over the fact that you would say some of the things you say to a lady, I know Shadow personally and even if I disagreed with her web page I would have a hard time not liking her, you sir apparently do not understand the meaning of "benefit of the doubt".
I personally think you SUCK asshole, be man and grow up. I to have been saving all of your post's and am going to forward every single one of them to who needs to see them, care if you want to because your opinion isn't shit to me!

Sorry Holihan, You cannot compare the 2 robbing someone or selling drugs or whatever is far away more harmful than any CB related activity. I personally feel no more a criminal than you do because i like big amplifiers, perhaps you exceed the speed limity on occasion or maybe you like to throw a few cold ones back and get behind the wheel at a .08 +/- I have yet to see any man who is perfect who goes thru life without bending some rule along the line, yourself or Johny Boy Kaspsiski included. Which would you rather have 3 murderers and 2 rapist, and 1 muggers live in your neighborhood or a guy who goes on the freebands, please get a clue Do you understand why the FCC has declared it a low priority because they dont give a shit about the cb band not many peoples lives are affected by the cb radio being in the state that it is even with all the Rules governing them the only persons lives who seem to be affected are 2 people yourself and John Kaspksisiksis.
Get real

The basic idea I have in mind is to find (or possibly write
myself in VB) a program that keeps a contact database, and
has a function to calc the beam heading and distance given
my lattitude and longitude and the that of the target
location.

Any and all amplifiers are illegal. A radio that transmits more than 4 watts is illegal. Wit all that BS aside, work on a good antenna first, like a Wilson 1000 (I am assuming you dont wish to modify your car with holes). A do yourself a favor if you get that Wilson, dont place anything in between it and your trunk or wherever you decide to stick it. Wash your car, plop it on and you wont have to worry about scratching it. If you have a decent antenna, then get yourself a little modulator by texas star, it'll give you a little boost. You really have to describe your radio, antenna, type of car, and how much you are willing to spend before anyone can give you a specific answer, other than those who are anti-linear, they will just shunt you out either way (they tend to get too specific).

Hank

Hi,
I wanted to maybe fill you in on how an ADSL curcuit works.

ADSL curcuit is a asymmetrical data channel using Discrete Multitone modulation. Meaning it sends and recieves its data of multipule frequencies. The freq range for just the data side is Upstream data (Sending) using 20khz - 138khz, downstream data (recieving) above 140 khz - 1.1 Mhz. So you see the majority of the signal is BELOW the heavy HF frequencies. Each frequency is broken up into 256 bits, and the system fits as much info. into what it can for any given moment. So if you interfere with a signal the most you are going to cuase is a retransmit of the data. Well this is happening so fast, it won't matter to much.

Although the author of the artical is bring out a good point. The companies out there know what noise to look out for, so they try to stay away from it as much as possible.

Now think about this, How much noise do you hear when you turn on a floresent light or a TV. Now understandably anything that transmits enough power will have harmonics no matter what it is. Computers, cellulars, TV's Cordless phones, etc. It all depends on 1. Power, 2. Proximity, 3. The type of signal, or modulation.

So the next time anyone out there cranks up that echo mic, or power mic, after there radio was just. peeked and tweek. Think about a unsheilded telephone line, or Audio video equip. . I know about it, I bleed on my on TV, they just don't make good RCA jacks any more.

Just a thought!
Ken.

Was there any mention of a California based manufacturer that now does tower construction for TRI-EX? Maybe I heard wrong but I'd like to see if I can purchase one brand-spankin' new. Any feedback?

137... back-out!

Dave,

It depends on money... You can spend alot or alittle, But I think One of the nice ones is the Uniden Grant XL or Cobra has a few nice one and they range in size and price. It all depends on what you want. If you look at your local phone book under radio repair, or Cb radios you might find something , Otherwise shop around at Radio shack, Wal-mart, Or some of the other Electronic Stores in your area. You can look for them on the web to. There are 1000's or cb's shops out there onthe net and they show you pictures and spec. on everthing.

Good huinting, Oh and I am kindaa partical to Cobras my self, especially the older radios, Oh Don't forget about swap meets and garage sales.

Have fun,
Ken

Hi Chris,

I have a wilson 1000, and let me tell you, its been a great investment. I have a mazda 323, and a Cobra 138 XLR, When I took my old chicken shack cheapy off and put that wilson on it was a brand new world.

The wilson is build with the same Idea that K40 used. But it will handle more power, if your into that. But it will suck in a signal that your regular car antenna won't and it handles the transmit very well also. I picked up a few S units to all the stations I talk to.

It will shoot skip with the best of them "BAREFOOTED".

Well the best advise I have is try one. Match it up. And if you don't like it after a week . Take it back.

There you go,
Happy to help.
Ken w.
